psychotherapist is the synthesis or reunion of the dissociated consciousness. The first part of the book discusses the phenomena of dissociation as revealed in sleep, dreams, hypnosis, automatic writing, and crystal-gazing; the second part describes the diseases of the subconscious. The work shows a closer acquaintance with clinical than with normal psychology. Dr. Coriat, who reflects the views of Janet in France and Prince in America, cites many interesting cases of mental abnormality. *Self Help and Self Cure* (E. Wilder and E. M. Taylor) is a "primer of psychotherapy." With no accurate knowledge of physiology, psychology or medicine the writers put together, not always judiciously, scraps of information and opinion from various sources. Exhortations to avoid fear, worry, and doubt, and to cultivate good habits are designed to help the "wayfarer" suffering from "functional diseases." Already psychotherapy is preyed upon by the innocent and ignorant enthusiast as well as by the quack. Both classes of "healers" ought to be restrained—by law, if necessary—from labeling their prescriptions, "the latest product of scientific knowledge." *Psychotherapeutics*, which has proved to be an extremely useful book, has been reissued within the year.

**PUBLIC DEBT.** See ARTICLES ON COUNTRIES.

**PUBLIC EDUCATION.** See UNIVERSITIES AND COLLEGES.

**PUBLIC HEALTH.** See HYGIENE.

**PUBLIC HEALTH ASSOCIATION.** A society founded in 1872 with the object of advancing sanitary science and the promotion of measures for the application of public hygiene. The work of the association is divided into four parts. At the meetings of the general association general subjects in relation to sanitary science are presented. The annual meeting in 1910 was held in Milwaukee. From a standpoint of general interest, probably the most important action taken at this meeting was the creation of a section on sociology. A "section" of the Association represents a group of members devoting its time and attention particularly to one branch of public hygiene, and the sociological section will demand the interest of those members who are especially interested in sociology in its relation to public health. In view of the growing importance of engineering in its relation to public health, the Association authorized, provisionally, the organization of a section on sanitary engineering. Provision was made at this meeting for the publication of a monthly journal, beginning January, 1911, to be known as *The Journal of the American Public Health Association*. The next meeting will be held in Havana, Cuba, December 4-9, 1911.

**PUMPING MACHINERY.** An ingenious but simple application of the internal combus-

tion principle has been made in the successful construction of an apparatus for raising water known as the Humphrey gas pump. This was made public to the engineering profession so early as 1909, since which time it has been carried beyond the experimental stage and in 1910 the pump was being built in large sizes. In form it consists of two or more chambers that can be put into communication with the source of water supply as well as with the tank or reservoir or stand pipe into which the water is to be delivered by means of suitable valves. In one of these chambers, corresponding to the cylinder of a gas engine, a mixture of gas and air is exploded by means of an electric spark. Instead of forcing a piston down from the top of a cylinder, the explosive energy of the gas mixture acts directly on top of the water column that partly fills the chamber, and this enforced flow of water under pressure opens the discharge valve or valves, allowing a certain quantity of water to be delivered through a discharge pipe to the tank or standpipe. Having exerted its expansive energy, the charge of burnt gas is now compressed and driven out through the exhaust valves by the returning surge of the water. Next, as the water settles down in the intake chamber once more, the inlet valve opens and a fresh charge of gas and air is drawn in and ignited, and the cycle of operations is repeated. The inlet and exhaust valves for the gas are spring-operated, while the inlet and discharge valves for the water are opened and closed by the water pressure itself.

As a two cycle motor, it seems to be very efficient, one of the first pumps built, operating at a compression pressure of 50 lbs. per square inch, showing a thermal efficiency of 23 per cent.; and in those now building, using much higher pressures (162 lbs.), a somewhat higher factor should be attained, after certain details are perfected. In Germany, a 1000 horsepower pump was under construction; and in England one was ordered for a water supply system that must raise 180 million gallons of water 30 feet in 24 hours, using fuel gas for which the consumption of coal must not exceed 1.1 lbs. per pump horsepower per hour. For so large a quantity of water, there will be five units, one of 20, and four of 40 million gallons capacity each.

**ELECTRIC POWER PUMPING STATION.** In the city of Spokane, Wash., a pumping station was put in operation during the year that is notable for the use of electric motors driving centrifugal pumps, and also in supplying two pipe lines running through the city, the high pressure main being for fire service. The building is 74 feet x 51 feet, built of brick and steel on a concrete foundation put down on a grillage of timber resting in turn on piles, and all below low-water mark of the river on the bank of which the station is situated. Water pumped from this installation is drawn from wells, and the suction mains run to each one of three sets of single-end-suction, horizontal-shaft centrifugal pumps. Each set consists of a motor with a pump driven from each end of its shaft, with valves so arranged that either pump may draw water, one discharging into the low pressure main, and the other into the high pressure main; or the discharge from the low pressure pumps may be fed to the suction side of those on the high pressure side.

Each motor, rated at 900 horsepower, is a 3-

phaes, 60-cycle, 2300-volt machine running at 880 revolutions per minute, and of course driving the two pumps at the same speed. Motors and pumps were supplied by the Allis-Chalmers Company. Tests demonstrated that each unit, working both pumps on the low pressure main, was capable of furnishing 12 million (12,000,000) gallons every 24 hours against a 260-foot head. When connected in series, one pump discharging into the suction of the other, and thence to the high pressure main, each unit can supply  $7\frac{1}{2}$  million (7,500,000) gallons per 24 hours against a 430-foot head.

**PUMPING ENGINE FOR WHEELING.** During the year there was completed by the Allis-Chalmers company at their West Allis shops a vertical triple-expansion pumping engine for the city of Wheeling, West Virginia, which had a capacity of 20,000,000 of gallons daily. So far as power was concerned this new pumping engine equalled the largest engine ever built by these makers, which had been installed in the city of Nashville. It was of the vertical triple-expansion type with steam cylinders 42 inches, 74 inches and 110 inches in diameter and water plungers 33 inches in diameter. The low pressure cylinder was the largest cylinder ever employed for a pumping engine. The engine was designed for a steam pressure of 125 pounds and a vacuum of 27 inches. The stroke is 72 inches and the regular speed is  $18\frac{1}{2}$  revolutions per minute. There are two fly-wheels which weigh 90,000 pounds each. There is a surface condenser located in the by-pass of the discharge line of the pipe with cut-off valves on either side. The valve-gear consists of admission valves of the Corliss type for the high and intermediate cylinders and Corliss exhaust valves on the high pressure cylinder; while poppet valves are used for the exhaust of the intermediate and for both admission and exhaust of the low pressure cylinders.

**PURDUE UNIVERSITY.** An institution of higher learning at Lafayette, Ind., founded in 1874. During the year 1910 there were enrolled in the university 1859 students and the teaching staff numbered 149. Among the changes in the faculty during the year were the resignation of Dean Arthur L. Green from the school of pharmacy and the appointment in his place of Professor C. B. Jordan a graduate of the University of Michigan. There were no benefactions of special note during the year. The most notable event of the year in the history of the university was the completion and equipment of a large building for the department of practical mechanics, with shops and drawing rooms for all departments of engineering. The income for the year ending June 30, 1910, for all departments of the university, including specific appropriations for buildings, was \$650,218. The President is W. E. Stone.

**QUEBEC.** A province of Canada (since July 1, 1867). Capital, Quebec. Area, 351,872 square miles. Population (estimate 1910), 2,214,834. For details, see **CANADA.** The government consists of the Lieutenant-Governor, appointed by the Governor-General of Canada, the Executive

Council (responsible ministry), and the legislature of two houses, the Legislative Council (24 appointed members) and the Legislative Assembly (74 elected members). In 1910, Lieutenant-Governor, Sir Charles Alphonse P. Pelletier (appointed September 4, 1908); Premier, Sir Lomer Gouin.

**QUEENSLAND.** A state of the Australian Commonwealth. Capital, Brisbane. Area, 670,500 square miles. Estimated population, December 31, 1909, 578,548. For details, see AUSTRALIA. The executive authority is vested in a governor, appointed by the British Crown and acting through a responsible ministry. The legislative power devolves upon a parliament of two houses, the appointive Legislative Council and the elective Legislative Assembly. Governor in 1910, Sir William MacGregor; Premier, W. Kidston (from June 29, 1909).

**HISTORY.** Parliament was opened on July 12. The legislative programme included the construction of a main railway across western Queensland uniting the other systems. The policy of subdividing the great sheep stations was continued and the government announced that it would have opened up half a million acres within the next six months. In his budget in August the treasurer estimated the current revenue at £5,046,000 and expenditures at £5,038,000, reporting a flourishing condition in commerce and trade, and influx of large capital from the other states and from foreign countries.

**QUINCY, JOSIAH PHILLIPS.** An American lawyer and publicist, died October 31, 1910. He was born at Boston in 1829, the son of Josiah Quincy, the second mayor of Boston of that name, and the grandson of the first Mayor Quincy of Boston. He graduated from Harvard College in 1850 and afterwards studied law, being admitted to the bar in 1854. He did not, however, follow his profession. He moved to Quincy in 1859, where he conducted a large milk farm for several years. His life was devoted to scholarship and to the study of economic questions. He also wrote poems which were warmly commended. Among his published writings are: *Lyteria* (poem, 1854); *Charicles* (poems, 1856); *Protection of Majorities* (1876); *Double Taxation in Massachusetts* (1889); and *Unearned Increment* (1890), together with pamphlets and contributions to newspapers and magazines.

**RAABE, WILHELM.** A German novelist and writer, died in November, 1910. He was born at Eschershausen, Brunswick, in 1831. He began to write in 1856 under the pen name of Jakob Corvinus, and his first work, *Die Chronik der Sperlingsgasse* (1856), proved to be the most popular of all his writings. In 1905 it had reached its 41st edition. His books are distinguished by shrewd and original humor. On his 70th birthday, in 1901, the University of Göttingen honored him with a doctor's degree. Among his published writings are the following: *Ein Frühling* (1857); *Der heilige Born* (1861); *Unsere Herrgotts Kanzlei* (1862, 4th ed., 1901); *Der Hungerpastor* (1864, 4th ed., 1902); *Abu Telfau, oder die Heimkehr vom Mordeberge* (1867, 4th ed., 1901); *Der Schüdderump* (1870, 3d. ed., 1901); *Horacker* (1876), and *Die Gänse von Butzow* (1906).

**RABIES.** The Public Health Report of the Hygienic Laboratory of the U. S. Public Health and Marine Hospital Service for August, showed that for the year ending June 30th, 1910, sixty

patients were treated at the laboratory with antirabic inoculations. Fifty-seven of the patients completed the treatment and no deaths are known to have occurred among them. Of these sixty patients, forty-seven were actually bitten or scratched by the teeth of the animal; ten had scratches or wounds exposed to the saliva, or were exposed during laboratory manipulations. Fifty-five persons were bitten by dogs, three by cats, one by a cow, and one by a mule. Examinations show that fifty-four of the exposures were to actual rabies, as shown by the laboratory examination. In addition to the inoculations given at the laboratory, treatments were sent out to State Boards of Health. The transportation of antirabic virus, in the form of dried spinal cords preserved in glycerine, without appreciable loss of potency, has been found practicable. Nine hundred and fifty-one treatments were thus sent out to State Boards of Health.

Paltauf emphasizes a striking peculiarity of rabies; that is, whereas only a relatively small proportion of persons bitten by rabid animals developed the disease, yet once the disease does fully develop, it terminates inevitably in death. There is no known authentic case of recovery from fully developed rabies in man, although recovery has been observed in dogs. According to reliable statistics, rabies develops in less than 10 per cent. of all persons bitten by mad dogs and not receiving prophylactic treatment, and when it is considered that such highly contagious diseases as smallpox, plague, etc., have a large proportion of recoveries, it is remarkable that the incident of rabies is only 10 per cent., when its mortality is 100 per cent. The question arises, if less than one-tenth of those inoculated with the virus develop the disease, why should not many of the infected cases recover? Another remarkable fact is that, in the process of protective inoculation, when a living virus is injected, the infection has never been known to occur, although over one hundred thousand cases have been thus inoculated. Evidently the virus passed through rabbits is incapable of infecting man. Presumably, the virulence of the virus with which the individual is inoculated is the deciding factor in determining whether the disease will develop or not, for it has been observed that the bites of mad wolves give rise to rabies in about 60 per cent. of those bitten, as against 10 per cent. of fatalities from dog bites, and none from the sub-cutaneous injection of attenuated rabbit virus.

A timely and most excellent review of the subject will be found in Bulletin 65 of the Hygienic Laboratory, U. S. P. H. & M. H. S. It is written by A. M. Stimson and called "Facts and Problems of Rabies."

**RACING.** The racing interests experienced another disappointing year in 1910. The New York State legislature passed a law making the owners and directors of the various racing associations criminally liable for any betting and bookmaking on their premises. This, added to the restrictions placed upon the sport in preceding years, brought the racing season in New York to an abrupt close immediately after the end of the Saratoga meeting. The associations, however, are in hopes that the courts will uphold them in their contention that the 1910 legislation is ambiguous and they believe that racing soon will be revived. Although the season was necessarily a brief one the sport while

it lasted was high class. Two new American records were established. *Bubbling Water*, carrying 121 pounds, covered one mile 70 yards in 1 minute 42½ seconds; and *Everitt*, a three-year-old (107) excelled *Fitz Herbert's* record at 2 miles by running the distance in 3 minutes 25½ seconds.

*Novelty* was considered the leading two-year-old of the season, winning the Futurity, the Hopeful Stakes, the Rennselaer Handicap, and the Saratoga Special. *Dalmatian* made the best showing of the three-year-olds, capturing the Brooklyn Derby, Seagate Stakes, Iroquois Stakes, Yonkers Handicap, Empire City Handicap, and the Travers. *Fitz Herbert* won the Brooklyn Handicap.

S. C. Hildreth, the owner of *Novelty*, *Fitz Herbert*, and *Dalmatian*, headed the list of winning owners with a total of \$144,025. R. T. Wilson was second with \$65,795, and J. R. Keene third with \$54,215.

In trotting and pacing 1910 was remarkable for the large number of new records made. The most noteworthy achievement was the trotting of the mile by *Uhlan* in 1 minute 58¾ seconds. Other record performances were those of *Colorado E.*, a three-year-old, in trotting the mile in 2 minutes 4¾ seconds, and *Joan*, a four-year-old, in covering the same distance in the same time. *The Harvester*, a stallion, ran the mile in 2 minutes 1 second, and the two-mile in 4 minutes 15¼ seconds; *Native Belle*, a three-year-old filly, ran the mile in 2 minutes 6½ seconds, and *Minor Heir* paced the mile in 1 minute 59 seconds.

**RACQUETS AND COURT TENNIS.** The national Amateur Racquet championship tournament in singles was held at Boston on February 22. In the final round Quincy A. Shaw of Boston defeated Reginald Fincke of New York 17-14, 8-15, 15-2, 15-2. In the doubles event held at New York in January Lawrence Waterbury and Reginald Fincke defeated M. Barger and Payne Whitney 6-15, 17-14, 10-15, 15-6, 15-8, 15-12. G. C. Clark, Jr. won the Gold Racquet championship at Tuxedo Park, defeating H. F. McCormick, the defender of the title, 10-15, 15-6, 14-18, 15-13, 15-6. Jay Gould successfully defended his title as national amateur champion in court tennis by his defeat of Joshua Crane at Lakewood. The scores of the sets were: 6-2, 6-3, 6-1. The English amateur court tennis championship was retained by E. H. Miles, who defeated N. S. Lytton, challenger, by 3 sets to 1.

**RAILWAYS.** Following a twelve-month period comparatively free from harassing State and Federal legislation and marked by a generally satisfactory improvement in earnings, the railways of the United States began the year 1910 under most favorable conditions. Before six months had elapsed, however, Congress had passed an act amending and supplementing the Hepburn act of 1906 whereby the powers of the Federal government in regulating the activities of railways engaged in interstate commerce were greatly enlarged, trainmen in all parts of the country made demands for big increases in wages which had to be met in whole or in part, and earnings began to fall off in response to a general slackening in industrial and commercial lines.

On January 7 President Taft sent to Congress a special message recommending sweeping and radical legislation for the purpose of strengthening some parts of previous acts which had been nullified by decisions of the Supreme Court and giving the Interstate Commerce Commission wider authority in matters relating to rates and discriminatory practices of railways. After prolonged discussion in committee and on the floor of both Houses of Congress the Mann-Elkins act, in which were incorporated most of the President's recommendations, was passed on June 18.

**MANN-ELKINS ACT.** The main points of the new law are as follows:

(1) A Commerce Court is established with jurisdiction over: (a) Enforcement of Interstate Commerce Commission orders, except for penalties, criminal punishment, or collecting money. (b) Annuling or suspending commission's orders. (c) Commission's suits to correct illegal practices. (d) Suits to compel compliance with commission's orders. Five additional circuit judges appointed by the President for a term of five years constitute this court, which will sit in Washington.

(2) Judgments may be appealed to the Supreme Court and shall have precedence over all except criminal cases.

(3) Suits against the commission's orders shall be against the United States and the court shall decide whether or not the order is stayed.

(4) The Attorney-General of the United States has control of suits and may employ special counsel; the commission or anyone interested may intervene.

(5) Common carriers must designate an agent in Washington to accept service of notices sent out by the Interstate Commerce Commission.

(6) The provisions of the interstate commerce law are extended to include telegraph, telephone, and cable companies. The list of railway employes who may receive passes is enlarged and many details of the law respecting these points are strengthened.

(7) The provision of the interstate commerce law commonly known as the "long and short haul clause" is changed so as to leave the question of similarity of conditions to be decided by the commission. Rates reduced to meet water transportation rates cannot be increased without the commission's authority.

(8) The commission is authorized to reject tariffs with defective notices and the carrier is penalized by fines of from \$25 to \$500 per day

for non-compliance with orders. Penalties for false billing are revised and penalties are imposed for making fraudulent claims for damage to freight.

(9) The commission is authorized to suspend new tariffs for four months from date they go into effect and six months beyond if necessary for inquiry. The carrier must prove reasonableness of any proposed increase. The commission shall not compel through rates with street electric passenger railways nor compel a road to put a part of its line between two points into a through route.

(10) The commission is allowed to require annual reports as of December 31, instead of June 30, if it sees fit.

(11) The President is authorized to appoint a commission to investigate the propriety of Federal regulation of railroad stock and bond issues.

This new law went into effect on August 18, except the provision relating to suspension of tariffs pending inquiry as to their reasonableness which went into effect immediately with the passage of the act. Among the most important provisions of the bill as originally drawn but which were stricken out before its passage were the following:

(1) Authorizing agreements between carriers as to rates.

(2) Forbidding the purchase by one railroad of the stock of another. The appointment of a commission to study the propriety of Federal regulation of stock and bond issues was substituted for this.

(3) A provision for physical valuation of all railroads.

(4) Modification of the "commodities clause" to overcome the defects pointed out by the Supreme Court in its decision in the matter of the anthracite coal roads.

**FREIGHT RATES.** Shortly before the passage of the Mann-Elkins act, a number of the western roads announced large increases in freight rates to take effect on June 1. The Attorney-General thereupon brought an action in the Federal Court in Missouri praying for an injunction against putting into effect the increases proposed. A compromise was reached whereby the new tariff was not to go into effect until July 1; and immediately after the passage of the act the Interstate Commerce Commission under the power conferred upon it by the new law suspended the new tariffs pending an inquiry as to their reasonableness. Other roads in the East filed increases in freight rates which were likewise suspended by the commission and early in September concurrent hearings were begun in New York and Chicago. The railroads presented evidence purporting to show the necessity for the advance in rates owing to the increased cost of materials and the higher wages paid to employees as the result of the settlement of threatened strikes earlier in the year. In December the commission held a series of hearings in Washington at which time Louis D. Brandeis, counsel for several associations of shippers, made the startling claim that the railroads of the country could save \$1,000,000 a day by the introduction of the efficient methods which had been developed by manufacturing companies. Up to the end of the year the commission had not announced its decision on the increases in rates asked by the railroads.

In May all the railroads entering New York City announced increases in their commutation and family ticket rates to suburban towns amounting to between 5 and 40 per cent. It was claimed that the old rates were unprofitable and that the increase barely compensated for the increases in wages granted about the same time to trainmen. Appeals were taken to the Interstate Commerce Commission and the Public Service Commissions of New York and New Jersey but without result and the increased rates were allowed to stand.

President Taft in December appointed as members of the new Commerce Court Martin A. Knapp, former chairman of the Interstate Commerce Commission, as presiding judge, R. W. Archbald, W. H. Hunt, John E. Carland, and J. W. Mack as associate judges. The Railroad Securities Commission appointed by the President in September consists of A. T. Hadley, president of Yale University, chairman; F. N. Judson, Frederick Straus, Walter L. Fisher, and Prof. B. N. Meyer. This commission began holding hearings in New York early in December but had made no report up to the end of the year.

**LEGISLATION.** Other laws passed by Congress and directly affecting railroads included an amendment to the act for expediting cases arising under the Sherman anti-trust law and the Interstate Commerce act; an amendment to the employers' liability law; a law requiring common carriers to make monthly reports of accidents to the commission and giving the commission full authority to investigate accidents; a law requiring the commission to designate the number, dimensions, location, and manner of application of safety devices used on equipment, the act to go into effect as regards new cars on July 1, 1911.

**STATE LEGISLATION.** State legislation affecting railways was not so general or drastic as in previous years. In New Jersey a Public Utilities Board to replace the old railroad commission was created by the legislature. It has jurisdiction over all public utility companies in the State. The new board does not have power to make or change rates but it is given wide authority over the issue of securities and all of its orders are subjected to review by the courts. A Public Service Commission was also established in Maryland, the provisions of the act creating it being very similar to the New Jersey law with the exception that the Maryland Commission has the power to determine the rates charged by public utility companies. In Ohio a bill enlarging the powers of the railroad commission was defeated.

**COURT DECISIONS.** There were few important decisions relating to railways handed down by the Supreme Court in 1910. In the Missouri River rate case the court upheld the ruling of the Interstate Commerce Commission requiring a reduction in first-class rates on shipments from the Atlantic seaboard to points west of the Missouri River. The court held that in the absence of proof to the contrary the order of the commission presumably was reasonable and would not be reviewed. The court also upheld the commission in the case of the commission against the Illinois Central Railroad involving the question of distribution of coal cars to shippers. The language of the court in this latter case was such as to lead to the presumption that it would not interfere with any

orders of the commission unless they were in effect confiscatory.

**INTERSTATE COMMERCE COMMISSION.** The year 1910 was an active one for the Interstate Commerce Commission. In addition to considering evidence on the rate increases asked by the railways, which occupied much of the commission's time during the last half of the year, it disposed of 817 formal complaints on its docket and 871 new cases were filed for future consideration. For criminal violations of the interstate commerce laws 44 new indictments were returned and 43 prosecutions were concluded. Aggregate fines of \$63,500 were imposed against 41 defendants found guilty. The commission says in its annual report for 1910: "The fight against discrimination is by no means won. Those practices still remaining are more insidious and more difficult of extirpation than open rebating. Certain divisions with terminal railroads, payments for the use of plant facilities, payments to shippers for performing for themselves services not incumbent upon the carrier, arrangements with private car lines and the ownership of industrial corporations by carrier corporations and the ownership of carrier corporations by industrial corporations are the more prominent and lawful examples of the abuses now continuing."

The decision against the Pullman Company was of the most general interest of any case considered by the commission. In April the commission held that the sleeping car rates charged by the Pullman Company between points in the Northwest were unreasonable and ordered the company to establish a differential between upper and lower berth rates. The Pullman Company appealed to the courts, but when the hearing was called it announced that it had decided to make substantial reductions in all lower berth rates and also that it would charge about 20 per cent less for upper berths than for lower berths. The reduction it is estimated will amount to nearly \$1,600,000 annually. The commission also ordered reductions of nearly 20 per cent. in the freight rates between the Missouri River and Seattle, Salt Lake City, and other western points.

**STRIKES AND WAGE INCREASES.** The year 1910 opened with a strike of switchmen in progress in the Northwest which was quickly and decisively won by the railways. On July 18 a strike of conductors, brakemen, and yardmen was declared on the Grand Trunk Railroad but it was ended with concessions by both sides early in August. Several other strikes were seriously threatened, but all trouble was peaceably settled by arbitration. The trainmen on several Eastern roads demanded standardization of wages in accord with those paid by the Pennsylvania Railroad which are the highest of any railway in the country. In general these demands were met. In the West the Brotherhood of Locomotive Engineers sought very large increases from 61 roads. Their demands were refused and a strike vote was taken but the matter was finally referred to arbitration and an average advance of 10 per cent. was granted. Railroad wages are now higher than ever before.

**RAILWAY EARNINGS AND EXPENSES.** The increases in wages were made for the most part late in the spring and the results in increased operating expenses did not show in the returns for the fiscal year ended June 30. Up to July 1 the railroads had enjoyed a prosperous year

and their earnings both gross and net were the largest ever reported, exceeding even the record figures of 1907. The returns to the Interstate Commerce Commission for the fiscal year 1910, showed gross earnings from operation of \$2,787,266,136 and operating expenses of \$1,847,189,773 as compared with gross earnings in 1909 of \$2,444,694,668 and operating expenses of \$1,616,571,846. During the last half of the year gross earnings fell off somewhat and the large wage increases, coupled with increased cost of supplies, lowered net earnings even more sharply. Railroads ceased buying all supplies except those most urgently needed, and pending a decision on the freight rate increases work was stopped on many improvements and extensions. The year closed with improvement work at a standstill and with little prospect of resumption until something definite was learned as to the possibility of increasing earnings through charging higher rates.

**RECEIVERSHIPS AND FORECLOSURE SALES.** The falling off in earnings during the last half of the year did not involve any important roads in serious financial difficulties and only seven properties with a total mileage of 735 and total liabilities of \$51,427,500 were placed in the receivers' hands. Of these the Buffalo & Susquehanna Railway with 361 miles of track and \$31,668,000 of liabilities was the largest system. Eighteen roads with an aggregate of 1100 miles of track and \$93,660,109 of stock and funded debt were sold at foreclosure sale. Most of the roads which were thrown into receivers' hands in 1907 and 1908 have now been reorganized and are out of difficulty.

**RAILWAY FINANCING.** The year was a poor one for floating large issues of securities. Legislation, wage advances, and the uncertainty over the possibility of rate increases impaired the credit of railways generally and this, coupled with a stagnant market and a demand from investors for high interest rates prevented the successful sale of securities. Early in the year several large issues were sold abroad. Among these were \$50,000,000 of 4 per cent. debenture bonds of the Chicago, Milwaukee & St. Paul and \$10,000,000 of 4 per cent. debenture bonds of the Cleveland, Cincinnati, Chicago & St. Louis. The aggregate of new railway securities sold during the year was close to \$950,000,000 as compared with \$1,100,000,000 sold in 1909.

Few significant changes were made in dividend rates during the year. The Canadian Pacific advanced its regular dividend rate from 6 per cent. to 7 per cent. and also declared an extra dividend of 1 per cent. The Chesapeake & Ohio increased its rate from 3 per cent. to 5 per cent. and a dividend of 4 per cent. on the common stock of the Cleveland, Cincinnati, Chicago & St. Louis was declared. There were no important reductions in dividend rates.

**CHANGES IN OWNERSHIP AND MANAGEMENT.** The number and importance of changes in railway ownership and control during the year was less than in 1909. The Chesapeake & Ohio, controlled by Edwin Hawley, acquired the Hocking Valley and the Kanawha & Michigan, giving it an entrance into Toledo, and it also bought the Chicago, Cincinnati & Louisville, which gives it an entrance into Chicago. Phelps Dodge & Company purchased the securities of the Chicago, Rock Island & Pacific which the Pearson-Farquhar syndicate, composed of Englishmen, was forced to sell after a sharp drop in the market.

0740

Marvin Hughitt retired as president of the Chicago & Northwestern and was succeeded by William A. Gardner, vice-president of the company. Lucius Tuttle resigned as president of the Boston & Maine following the passing of control of this road to the New York, New Haven & Hartford. J. T. Harahan retired as president of the Illinois Central and Daniel Willard of the Chicago, Burlington & Quincy succeeded Oscar G. Murray as president of the Baltimore & Ohio.

**RAILWAY CONSTRUCTION.** The new railway track built in 1910 exceeded the mileage built in 1909 by about 10 per cent., although few new projects were started. Statistics compiled by the *Railway Age Gazette* show that 4122 miles of main line track were built during the calendar year as compared with 3748 miles built in 1909. The longest single piece of construction was 160 miles between Lubbock and Coleman, Tex., which is part of a cut-off 310 miles long which the Atchison, Topeka and Santa Fé is building between Coleman, Tex., and Texico, N. Mex. The Chicago, Milwaukee & Puget Sound built 421 miles in the four States of Idaho, Washington, North Dakota, and South Dakota. In Canada work was pushed on both the eastern and western ends of the Grand Trunk Pacific and 772 miles were completed. Other Canadian roads were also active in construction work and the total for the northern half of the continent was 1844 miles as compared with 1488 miles in 1909. The total mileage of steam railways in the United States reporting to the Interstate Commerce Commission for fiscal year ended June 30, 1910, was 239,652 as compared with 233,902 miles in 1909.

The railways of the world according to statistics compiled by the *Archiv für Eisenbahnen* had an aggregate mileage of 611,478 at the end of 1908 divided by continents as follows:

Europe, 202,109; Asia, 58,813; Africa, 19,211; North America, 274,372; South America, 39,013; Australasia, 17,960.

A total of 16,445 miles were built in 1908 and the increase since 1904 was 61,505 miles. The total capital invested in the world's railways is estimated at \$51,184,000,000.

**ELECTRIFICATION.** The most important event in heavy electric traction during 1910 was the completion and commencement of electric operation of the Pennsylvania tunnels under New York City. The terminal station at Seventh Avenue and Thirty-third Street and the tubes under the East River were opened for trains of the Long Island Railroad on September 8, and on November 27 all Pennsylvania Railroad through trains from South and West were operated into the new station. The New York Central extended its suburban electric zone 12 miles north on the Harlem Division to White Plains and on the Hudson River Division to Yonkers. Active construction work was begun in October on the electrification of the Hoosac Tunnel on the Fitchburg Division of the Boston & Maine. This tunnel is one of the longest in the world and great trouble has been experienced in operating trains through it hauled by steam locomotives. The single-phase alternating current system using an overhead wire conductor has been adopted for the tunnel work. The tunnel of the Michigan Central under Detroit River was opened for traffic early in December. It is used both for freight and passenger trains, which are hauled by direct current locomotives.

In March a disastrous snow slide in the Cascade Mountains near Willington carried away four of the six electric locomotives used by the Great Northern in hauling trains through the Cascade Tunnel. The overhead wires were broken down and the locomotives were buried under tons of snow and rock. They were not seriously damaged, however, and were raised and repaired in a few weeks. Electric operation was not resumed until early in the summer. See **ELECTRIC RAILWAYS.**

**CAR AND LOCOMOTIVE BUILDING.** Late in 1909 the railways ordered large numbers of cars and locomotives in anticipation of heavy traffic to be handled in 1910 and these orders kept the builders busy during the first half of the year. Following the wage increases in the early spring and the uncertainty as to the future as the result of the passage of the Mann-Elkins act, the railways ceased ordering new equipment and by the end of the year the output of the car and locomotive builders had dropped to very low figures. On the whole, however, the output compared favorably with the average of recent years. Statistics compiled by the *Railway Age Gazette* show that 50 car builders in the United States and Canada built 180,945 freight cars and 4412 passenger cars, or a total of 185,357 cars as compared with 96,419 cars in 1909. The following table shows the number of cars built in each year since 1905:

Year	Freight	Pass.	Total
1905 .....	165,155	2,551	168,006
1906 .....	240,503	3,167	243,670
1907 .....	224,188	5,457	229,645
1908 .....	76,555	1,716	78,271
1909 .....	93,570	2,849	96,419
1910 .....	180,945	4,412	185,357

Returns from 12 locomotive builders in the United States and Canada show a total of 4529 locomotives built during the year as compared with 2387 built in 1909. The output by years since 1905 has been as follows:

Year.	No.	Year	No
1905 .....	5,491	1908 .....	2,342
1906 .....	6,952	1909 .....	2,887
1907 .....	7,362	1910 .....	4,755

**BLOCK SIGNALS.** Nearly 6000 miles of track were equipped with block signals of some kind during 1910 bringing the total up to 69,311 miles. Of this total, 17,365 miles are protected with automatic block signals.

**RAILWAY ACCIDENTS.** The reports of railway accidents compiled by the Interstate Commerce Commission for the year ended June 30, 1910, show a large increase over 1909. The total casualties were 80,178 including 3804 deaths and 82,374 injuries. The increased casualties were from all causes but the largest increase was under the classification "other causes" which includes deaths and injuries to trespassers. The detail record for 1909 and 1910 is given at top of page 622.

**MONORAIL.** The gyroscopic monorail car brought out in Great Britain in 1909 by Louis Brennan, the inventor, attracted wide attention but no monorailways employing this principle were built or actively projected in 1910. In the United States one experimental monorailway 3 miles long was built in the suburbs of New York City connecting Bartow and City Island. On

the first public trip on July 17, the car was derailed while running at 30 miles per hour and several passengers were injured. The derailment occurred on a curve and was due to weak construction of the supports of the overhead guiding rail. The overhead structure was rebuilt and strengthened and regular operation was commenced in November. The system employed for this line is known as the Tunis system and was first tried at the Jamestown Exposition. The car runs on a single ground rail and two motors are mounted on each driving axle without the use of gears. A continuous guide rail and current carrying conductor is suspended above the ground rail at a height sufficient to clear the car roof, and double guide wheels on the roof of the car prevent tilting to either side. The guide rail is suspended by a bracket catenary construction from steel poles spaced from 75 feet to 100 feet apart as in an ordinary overhead trolley system. See paragraphs on *Communications* in articles on the different countries.

**RASSAM, HORMUZD.** A Syrian Orientalist, died September 16, 1910. He was born at Mossul, in northern Mesopotamia, opposite the site of Nineveh, in 1826. In 1845 he joined Austin Henry Layard as assistant in his Assyrian researches and lived with him for more than two years. When Mr. Layard returned to England, Rassam accompanied him and completed his studies at Oxford. In 1849 he was sent by the trustees of the British Museum to accompany Mr. Layard in his second undertaking and he was later placed in charge of an independent expedition. In 1864 he went to Abyssinia and was made a prisoner and kept in chains for nearly two years by King Theodore. From 1876 to 1882 he again conducted Assyrian explorations. During the Turco-Russian War he was sent by the British Foreign Office on a special mission to Asia Minor, Armenia and Kurdistan to inquire into the condition of the different Christian communities. He was the author of *British Mission to Theodore, King of Abyssinia; Ashur, and the Land of Nimrod; The Garden of Eden, and Biblical Sages and Biblical Lands*.

**RAT-BITE FEVER.** Under this name Horder, of St. Bartholomew's Hospital, London, reported three cases of a previously undescribed disease, adding something to our knowledge of the rôle which this rodent plays in the dissemination of disease. Each of the cases reported had sustained a bite from a rat, and after an incubation period of three to four weeks inflammation of the lymph channels in the tissues about the bite set in, accompanied by malaise, anorexia, and fever. At the same time, hard, reddened patches appeared, irregularly distributed over the skin, and tender swellings in the muscles. The attack may last from a few days to a week, and a series of similar attacks follow at intervals, sometimes for several months, the intervals varying from three to ten days. No germ was found in the blood, but Horder believes that the infective agent is a protozoön.

**RATIONS.** See MILITARY PROGRESS.

**RATE REGULATION.** See RAILWAYS.

**REALISM.** See PHILOSOPHY.

**RECALL.** The recall is the most modern of the new "checks" on the exercise of administrative powers. In its simplest terms it is a provision for the removal of an elected official (although in some places there is a suggestion that it be applied to appointive officials as well) by an affirmative vote of the electors at a special election called by a formal petition to which a varying percentage (usually 25) of the electors have attached their signatures.

**CITIES HAVING THE RECALL.** Los Angeles, in 1903 seems to have been the first city to have made the recall a part of its city charter. In 1905, San Diego, Cal., San Bernardino, Cal., Pasadena, Cal., and Fresno, Cal., followed. In 1906, Seattle joined the list and in 1907 there were added Everett in Washington and six cities in California, viz: Santa Monica, Alameda, Long Beach, Vallejo, Riverside and San Francisco. Of the commission-governed cities, the following have a recall provision: Dallas, Fort Worth, Denison, Austin, Waco, Palestine, Corpus Christi, Marshall and Amarillo, Texas; Leinston, Idaho; Huntington and Bluefield, West Virginia (the latter through a citizens' board); Haverhill and Lynn, Massachusetts; Colorado Springs and Grand Junction, Colorado; Berkeley and Oakland, California; Tacoma, Washington; McAlester, Sapulpa, Enid, Ardmore, Tulsa, Muskogee and Bartlesville, Oklahoma.\* The State commission government laws which provide a recall for the cities availing themselves of the act are: Iowa, Kansas (cities of the first class); Illinois; South Dakota; South Carolina and Louisiana. In Minnesota the cities adopting a commission plan may include the recall. Oregon adopted an amendment to its constitution (June 1, 1908) by a vote of 58,381 for to 31,002 against, which provides for the recall of State officials. The amendment, which was proposed on initiative petition, gave "to the voters the power to call a special election at any time to discharge any public officer and to elect his successor."

**LOS ANGELES.** Los Angeles was the first to adopt a recall provision and the first city to

\* See paper of Dr. E. S. Bradford in the "Proceedings" of the Buffalo Meeting of the National Municipal League.

apply it. It has recalled an alderman and a mayor. The former had voted to give a certain political newspaper the city printing at a figure \$15,000 above that bid by other journals. The removal of the mayor, who had been making unfit appointments to office, and was otherwise unworthy, was the second instance. The removal in March, 1909, of so important an official as a mayor awakened general interest and comment throughout the country. Mayor Harper resigned before the recall went into effect. A successor was elected at the special election called by the petition. He was re-elected at the regular election for the full term. At another time the threat of the recall directed against the council caused that body to rescind their vote giving away three miles of river bed worth a million dollars.

**DECISION IN THE CASE OF RICHMOND, CAL.** In Richmond, California, in the spring of 1910, a petition was presented to the city council demanding a recall election for the entire council. The board refused to order the election upon the ground that the reasons set forth were not sufficient and the charges were not definite enough. The matter was then taken into the Superior Court through mandamus proceedings, and the superior judge issued a writ of mandate running to the council, ordering the election. The recall provision was upon argument declared constitutional by the Superior Court and then an appeal taken to the Supreme Court of the State. In *Hilfinger vs. Gilman*, the Supreme Court of Washington (105 Wash. Reps. 471) has decided that the provision in a city charter for the recall of any elective officer is not in conflict with the constitution, providing that all officers not liable to impeachment shall be subject to removal for misconduct or malfeasance, as provided by law.

**RECENT INSTANCES.** Dallas, Texas, which is operating under the commission form, used the recall for the first time in the spring of 1910. Two members of the school board removed a teacher against whom there were no complaints or charges. In fact she was a particularly efficient educator. One member of the board, it seems, desired the place for a friend and the teacher was summarily removed. The parents of the children took the matter to the public, a special election was called and the members of the school board "who fought a woman," were recalled. Seattle voters proposed in December to recall the mayor of that city, Hiram C. Gill, on the question of his administration of the laws relating to vice and graft. See WASHINGTON.

**ARGUMENTS FOR THE RECALL.** In reply to the objection that the recall would lead to governmental instability, its advocates and supporters aver that "it virtually operates in the House of Commons of England, through the failure of the cabinet to maintain a majority or the success of a want of confidence motion. It actually exists in all the national and municipal offices of England, because the men who hold the offices are appointed, and misbehavior or inefficiency leads to suspension or dismissal. Under our elective system, if we elect an official who turns out to be a fool or a rascal we have no redress. The recall would give the voters the power of discharging an incompetent, or untrustworthy, servant. And that is all. But the voters should have that power."

**RECEIVERSHIPS, RAILWAY.** See RAILWAYS.

**RECIPROCITY.** See CANADA, History, and TARIFF.

**RECLAMATION.** **FEDERAL RECLAMATION.** The projects for the reclamation of the arid public lands of the United States are carried on by the act of Congress approved June 17, 1902, known as the Reclamation act. This act set apart as a fund for the reclamation of arid lands all moneys received from the sale of public lands in certain of the Western States and Territories, excepting 5 per cent. of the proceeds of such sales, set aside by law for educational and other purposes. The receipts from this source to June 30, 1910, amounted to about \$65,700,000 and the net investment of the fund in reclamation works on the same date amounted to \$53,781,302.

Since March 4, 1909, no new projects have been undertaken under this act, but prior to that date 32 primary projects had been undertaken, the net investment in which to June 30, 1910, amounted to \$52,945,441.

The receipts from the sales of public lands were found to be insufficient for the speedy completion of existing projects, and on the recommendation of the Secretary of the Interior and President Taft, Congress passed on June 25, 1910, a measure authorizing the issuance of not to exceed \$20,000,000 in certificates of indebtedness payable out of the reclamation fund five years after the date of their issue. The appropriation was made subject to the provision that it should be expended upon existing projects and necessary extensions and that no part of the amount should be expended until after the project shall have been examined and reported upon by a Board of the Engineering Officers of the United States Army and approved by the President as feasible, practical and worthy. The Board on December 26 recommended the expenditure of the \$20,000,000 appropriated by Congress for the different projects under construction as follows: Salt River, Ariz., \$95,000; Yuma, Ariz. and Cal., \$1,200,000; Grand Valley, Cal., \$1,000,000; Uncompahgre, Col., \$1,500,000; Payette-Boise, Idaho, \$2,000,000; Milk River, Mon., \$1,000,000; North Platte, Wyo. and Neb., \$2,000,000; Truckee and Carson, Nev., \$1,193,000; Rio Grande, N. M., Tex., and Mexico, \$4,500,000; Umatilla, Ore., \$325,000; Klamath, Ore. and Cal., \$600,000; Strawberry Valley, Utah, \$2,272,000; Sunnyside, Yakima, Wash., \$1,250,000; Tieton, Yakima, Wash., \$665,000. Total, \$20,000,000.

The Reclamation Service began its work in 1902 on the passage of the act above mentioned. The first contract was let in September of the next year and on June 17, 1905, an important project in Nevada was formally opened. Since that date the activities of the Reclamation Bureau have been extended to 26 or more projects. In the seven and a half years of its work, the service has built 4215 miles of canal; it has excavated 17 miles of tunnels and its excavations of rock and earth amount to 60,000,000 cubic yards. At the end of 1910 it had completed four of the highest dams in the world. These were the great Roosevelt dam in Arizona, one of the most massive in the world; the Shoshone dam in Northern Wyoming, the highest structure of its kind ever built; the Pathfinder in Southern

Wyoming, and the Laguna dam in Arizona. During the year the Gunnison tunnel, whose completion was celebrated in 1909, was for the first time utilized.

Among the several large projects under construction in 1910, one of especial interest is located in Northern Wyoming. This is the Shoshone dam, mentioned above, built to control the waters of the Shoshone River. This dam has a wedge of concrete 328 feet from base to top. A smaller dam will divert the waters through a tunnel  $3\frac{1}{4}$  miles long into a canal which for forty miles passes along the upper edge of a broad and fertile valley containing 150,000 acres. Another notable project is the Belle Fourche project in South Dakota. Across the valley of the Belle Fourche, which contains 100,000 acres of prairie, many miles of canal have been laid, and what was a short time ago a free cattle ranch region is rapidly becoming a compactly settled agricultural community. An impressive engineering feature of this project is the Owl Creek dam, one of the longest and highest earthen embankments in the world. This structure is 6200 feet long, has a maximum height of 115 feet and contains 1,600,000 cubic yards of material. The reservoir created by this dam will be the largest lake in the State. By means of a deep and wide canal  $6\frac{1}{4}$  miles long the entire flow of the Belle Fourche River is turned into the reservoir, to be taken up again into irrigating canals. It will supply 100,000 acres in 1911. Of the reclamation projects undertaken by the government, none is more important than the Salt River project in Arizona. This includes the construction of the wonderful Roosevelt dam which is built across a gorge which the Salt River has cut through the mountains. This dam will provide an adequate water supply for 240,000 acres of land. The Roosevelt dam is in many respects the most remarkable structure of its kind in the world. It has a height of 280 feet and a length on the top of 1080 feet. The enormous capacity of the reservoir created by it makes it one of the most stupendous engineering feats of modern times. Two valleys, one 12 miles and the other 15 miles in length, each from one to three miles wide, have been transformed by this dam into a lake 200 feet deep in places and containing enough water to cover the State of Delaware a foot deep. The reservoir, when full, has a capacity sufficient to fill a canal 300 feet wide and 19 feet deep extending from Chicago to San Francisco.

Other projects either completed or in course of construction are the Huntley and Lower Yellowstone-Sun River project in Oregon and the Grand Valley project in Colorado for which preliminary plans have been made; the Truckee-Carson project in Nevada; the Salt River Valley project in Utah; the Umatilla project in Oregon; the Klamath project in Oregon and California; and the Okanogan and Yakima projects in Washington. The latter is the largest irrigation project of the government. Here is a concrete dam which diverts the water into a canal and at the present time irrigates 45,000 acres. It will ultimately supply 94,000 acres. The table at top of next column gives the names of the different reclamation projects completed or in course of construction at the end of the year 1910, with the total cost, which includes building, maintenance, operation and water right charges.

**STATE RECLAMATION.** By an act of Congress approved April 18, 1894, the Secretary of the Interior is authorized to enter into contracts with States containing public arid lands to patent to each of the States to which the law is applicable not to exceed 1,000,000 acres of land upon their reclamation through the State or its agent. Since the passage of this act applications have been made for 6,587,508 acres of land, of which amount 2,765,946 acres were applied for during 1910. The States from which applications have been made are Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah and Wyoming. The largest application has been made from Utah, 2,842,811 acres. From Wyoming application has been made for 1,371,153 acres; from Colorado, 728,881 and from Oregon, 568,726 acres. Legislation authorizing the temporary withdrawals of lands in the interests of the States and Territories, pending preliminary investigation, was enacted into law on March 15, 1910. See IRRIGATION, and LANDS, PUBLIC.

**RECLAMATION ACT.** See DRAINAGE; IRRIGATION; RECLAMATION.

**RED CROSS, AMERICAN NATIONAL.** The American Association of the International Red Cross was founded in 1882 under the leadership of Miss Clara Barton. It had its origin in the purpose of the conservation of human life in time of war, but the charter granted by Congress to the American Red Cross, which created it the officially authorized Red Cross of the United States government, provides that it shall not only take charge of the voluntary relief in time of war, but that it shall contain and carry on a system of national and international relief in time of peace and apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great calamities and to devise and carry on measures for their prevention. The Red Cross has

SITE OF EAGLE DAM RECLAMATION PROJECT, NEW MEXICO

Digitized by Google

existed in its present form since 1904, when it was reorganized and reincorporated by act of Congress, January 5, 1905. It has affiliations with the government which ensure harmony and coöperation between the government and the society. President Taft has been the president of the society since 1908 and was re-elected in 1910. The society has for many years been attempting to raise an endowment fund of \$2,000,000. Of this amount, contribution of half a million dollars was secured during 1910 from New York City alone. A Red Cross seal was originated which could be attached to the backs of envelopes. These were succeeded by the Red Cross Stamp, which was used in 1909 and which caused some trouble with the post-office. More than 60,000,000 of these seals were distributed through the United States in 1910. The annual meeting was held on December 6, 1910. In addition to the reelection of President Taft, the following officers were elected: Vice-President, Robert W. de Forest of New York; Secretary, Charles L. Magee; Treasurer, A. P. Andrew, and Counsellor, Frederick W. Lehmann. The Society had at the end of its fiscal year, \$124,023 in cash in the treasury and \$204,863 in securities. Announcement was made at the meeting that prosecution of concerns which violated the act of Congress of June 23, 1910, protecting the Red Cross insignia from manufacturers may be expected if such violations continue. From the time of its reincorporation in 1905 the Red Cross has rendered assistance to sufferers from the Philippine typhoon, Japanese famine, eruption of Vesuvius, Italian earthquake, the Gulf storm, the Chinese famine, the Russian famine, the Mississippi cyclone, the Southern floods, Monongah mine disaster, the Chelsea fire, and Michigan and Canadian forest fires.

**REFORM BUREAU, INTERNATIONAL.** An organization aiming to promote all moral reforms in all lands, inaugurated by Rev. Wilbur F. Crafts, Ph. D., in a course of lectures on Sociology at Princeton University. The Bureau was incorporated at Washington in 1896. Among the special evils which it was formed to combat are intemperance, impurity, Sabbath breaking and gambling. Its work is carried on through legislation, by letters, by lectures and by literature. It has four fields of work, local, State, national and international. Its specialties at the present time in its local work are the censorship of theatres

and other shows, the purging of news stands of criminal and vicious literature and the enforcement of laws relating to morals. In the State work the Bureau gives special attention to race track gambling, which has been outlawed in all of the United States except six States. In its national work it has drafted thirteen laws which have passed Congress. Among these are laws which prevent the selling of liquor at immigrant stations, laws prohibiting the sale of liquor, opium and firearms by American traders in the islands of the Pacific having no civilized government, and the Gillett divorce reform act, which broke up the "divorce colonies" in the Territories. Important work in the international field has been carried on in relation to measures to restrict liquor selling in Africa and against the sale and use of opium in China and elsewhere. Among the bills presented by the Bureau in Congress in 1910-11 was a bill prohibiting the transmission of race-gambling bets from or into any State or Territory; a bill to prohibit interstate transportation of prize fight pictures; a bill to prohibit saloons in Hawaii; a bill to prohibit United States attorneys from engaging in private practice; a bill to prohibit the issuing of money orders and registering of mail on Sunday. A yet more important legislative task in which the Bureau, and especially its Oriental Secretary, Rev. E. W. Thwing, Tientsin, China, is engaged, in the carrying of an international prohibition of opium at a Hague Parliament of Nations to meet in 1911. The Bureau occupies a building of its own in Washington. The officers in 1910 were, President of the Board of Trustees, Henry W. Blair, Secretary, Rev. F. B. Power, D. D., Superintendent and Treasurer, Wilbur H. Crafts, Ph. D.

**REFORMED CHURCHES THROUGHOUT THE WORLD HOLDING THE PRESBYTERIAN SYSTEM, ALLIANCE OF THE.** An organization formed in London in 1875. It has held nine General Councils. The ninth Council was held in New York City in 1909 and the tenth will be held in Aberdeen, Scotland, in 1913. The churches connected with the Alliance number more than ninety and are located on all the five continents. The adherents of the Presbyterian and Reformed Churches in the world number about 25,000,000. The Alliance includes Presbyterian and Reformed Churches in the United States and Canada, England and Wales, Ireland, Scotland, in the Continent of Europe and in Africa, Asia, Australasia and South America. The President in 1910 was Reverend David James Burrell; the General Secretary, Reverend G. D. Matthews, and the American Secretary, Reverend W. H. Roberts.

**REFORMED CHURCH IN AMERICA (DUTCH).** A Protestant religious denomination, which was originally composed of settlers from Holland, but is now largely intermixed with elements from many other sources. Until 1867 it was known as the Reformed Protestant Dutch Church in North America. The first church organization of the denomination was established in 1628. According to the religious census made by the United States Census Bureau in 1906 and published in 1910, the total number of communicants in the denomination was 124,938 with 659 church organizations, 640 church edifices and 710 ministers. The value of the church property in 1906 was \$15,-

553,250. There were in the Sunday schools 120,705 scholars with 12,089 officers and teachers. According to the statistics gathered by the denomination itself, the total enrollment in 1910 was 116,815, with 684 churches and 728 ministers. The number of Sunday schools was 776, with a total enrollment of 117,854. The contributions received during the year for denominational objects was \$389,776, and for other objects, \$95,954. There were received for congregational purposes \$1,569,082, making a total of all contributions of \$2,054,812. The church sustains foreign missions in China, India, Japan and Arabia. The Church Building Fund has charge of the aid for the erection of new churches. Other funds supported by the denomination are the Disabled Minister's Fund and the Widows' Fund. There are three theological seminaries, the New Brunswick Seminary at New Brunswick, N. J., the Western Seminary at Holland, Mich., and the Arcot Theological Seminary at Vellore, India. The denomination sustains two colleges, Rutgers College at New Brunswick, N. J., and Hope College at Holland, Mich. The official organs are *The Christian Intelligencer*, published in New York City, *The Leader*, published at Holland, Mich., and *De Hope*, published in the Dutch language. There are in addition many missionary and departmental publications. The church has a Board of Education which furnishes aid to educational institutions and to young men studying for the ministry. Its legislative bodies consist of a general synod, four particular synods and thirty-six classes. The synods meet annually, the classes semi-annually. The headquarters of the denomination are at 25 East 22d Street, New York City.

#### REFORMED CHURCH IN THE UNITED STATES (GERMAN).

A Protestant religious denomination, founded by immigrants from the Palatinate and other districts of Germany, which was established in the United States at Germantown, Pa., in 1714. The church in 1910 numbered 293,836 communicants, 1737 churches and 1430 ministers. There are eight district synods and 59 classes corresponding to the presbyteries in Presbyterian bodies. The scholars in the Sunday schools numbered about 233,000 and the teachers about 25,000. The denomination carries on home mission work and its fields cover practically the entire United States and portions of Canada. There are 189 missions of which 71 are under the two German Boards, the Eastern and Western, and the remaining 118 are under the General Board. Foreign missions are carried on in Japan and China. Under the control of the denomination are the Eastern Theological Seminary at Lancaster, Pa., the Central Theological Seminary of the Reformed Church in the United States at Dayton, O., and a mission house for training missionaries at Sheboygan, Wisconsin. Franklin and Marshall College at Lancaster, Pa., is the leading collegiate institution under the denominational auspices. Other colleges are Heidelberg College at Tiffin, Ohio, and Ursinus College at Collegeville, Pa. Colleges for women are maintained at Frederick, Ind., and at Allentown, Pa.

**REFORMED EPISCOPAL CHURCH.** An Episcopal Church of historic orders, organized in 1873 in New York by members of the Prot-

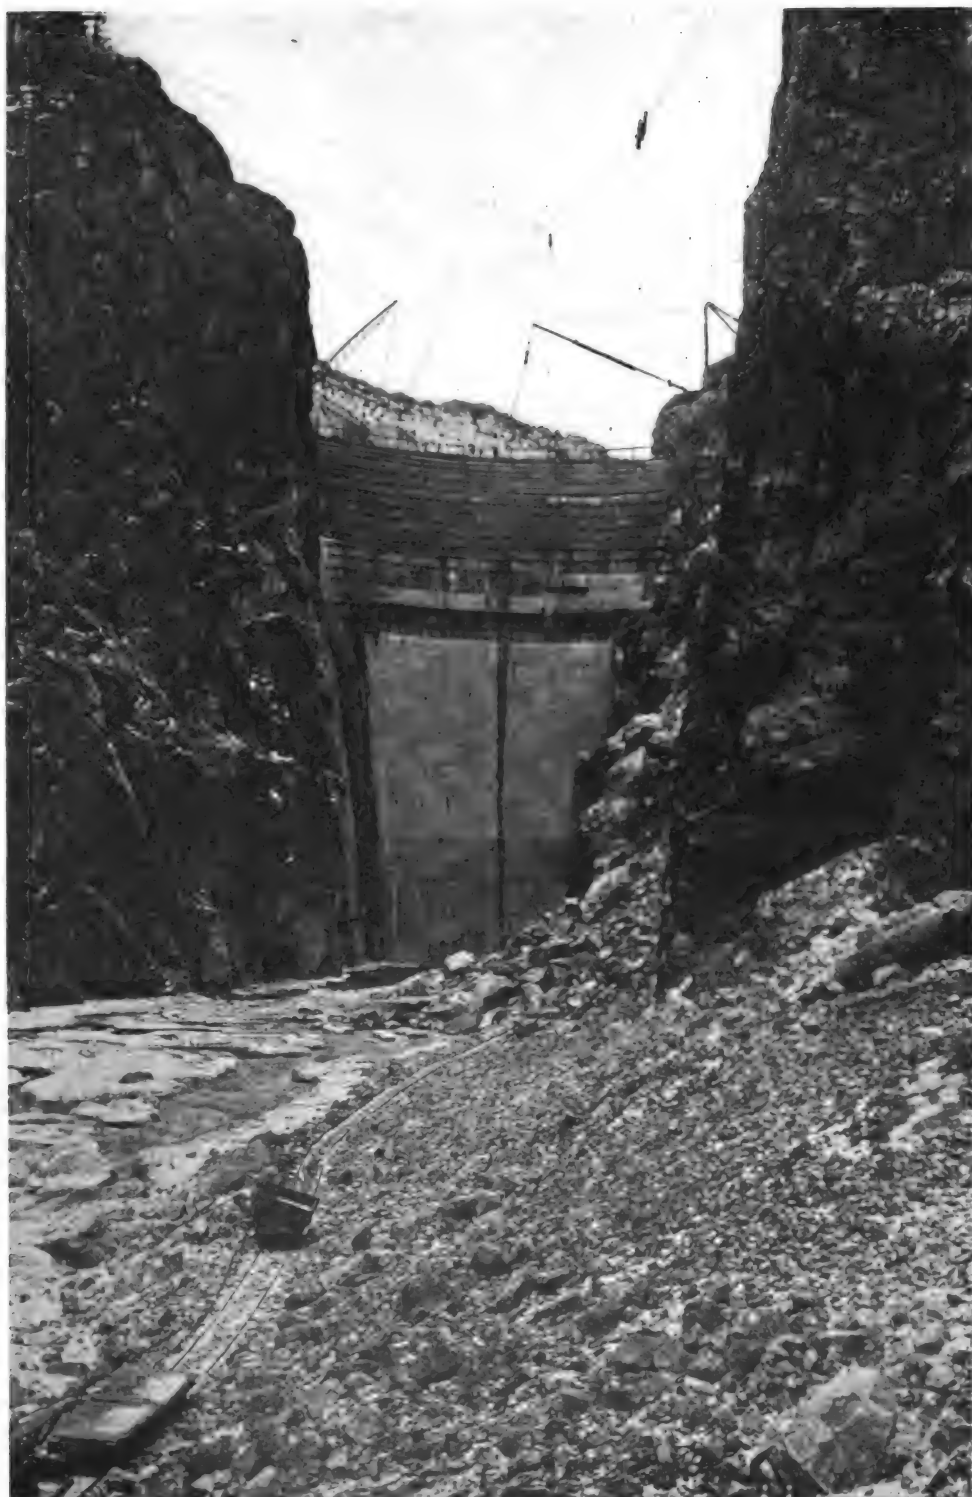

estant Episcopal Church who were opposed to the growth of sacramentarianism and sacerdotalism in that church and who made the separation in order that they might continue to worship after the historic orders of the English Reformation. According to the statistics of the General Council of the denomination, the church numbered in 1910 10,331 communicants, 89 parishes, including 32 colored churches in South Carolina, and 103 clergymen. There were six bishops, and one bishop in England. The value of church property is about \$1,833,032. The denomination endowment fund, exclusive of parochial endowments amounted to about \$350,000. The church carries on missionary work, including between 30 and 40 churches among the colored freedmen of the South. Foreign missions are carried on in India. The theological seminary of the denomination is in Philadelphia. The official organs of the church are *The Episcopal Recorder*, published in Philadelphia, and *The Evangelical Episcopalian*, published in Chicago.

#### REFORMED PRESBYTERIANS.

The general name given to several religious bodies of Presbyterian doctrine, founded by members of the Covenanted or Reformed Presbyterian Church of Scotland. The title includes the Synod of the Reformed Presbyterian Church of North America, the Reformed Presbyterian Church in North America, General Synod, the Reformed Presbyterian Church, Covenanted, and the Reformed Presbyterian Church in the United States and Canada. According to the religious census made by the United States Census Bureau in 1906, published in 1910, there were in the synod of the Reformed Presbyterian Church of North America, the largest body, 9122 communicants, with 116 churches and 128 ministers. In the Reformed Presbyterian Church of North America, General Synod, there were 3620 communicants, with 27 churches and 26 ministers. The other two bodies are small, the Reformed Presbyterian Church, Covenanted, reporting in 1906 only 17 communicants and the Reformed Presbyterian Church in the United States and Canada, 440 communicants. The General Synod maintains a theological seminary at Philadelphia and a college at Cedarville, Ohio. It sustains a mission in northern India. This body held its annual meeting at Cincinnati, Ohio, on May 18, 1910. The next annual meeting will be held at Cedarville, Ohio, on the third Wednesday of May, 1911.

**REFORM SCHOOLS.** See EDUCATION IN THE UNITED STATES.

**REICH, EMIL.** An Austrian author and historian, died December 11, 1910. He was born at Eperjes, Hungary, in 1854, and studied in that city and in the Prague, Budapest and Vienna universities. Up to his thirtieth year he devoted himself almost entirely to study. Declaring books unsatisfactory for a real comprehension of history, he determined to travel extensively in order to complement the study of books with the study of realities. He spent five years in the United States, four in France and twelve in England. In the latter country he lectured frequently at Oxford, Cambridge and London universities. His lectures were very popular and, although designedly lacking in profundity, contained evidences of wide and deep learning. He was employed by the British government to assist in the settlement of the

**REID, W. M.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**REINECKE, KARL.** A German composer, died in March, 1910. He was born in 1824 at Altona, Prussia. He studied with his father, Johann Reinecke, a composer and director. From 1846 to 1848 he was Court pianist to Christian VIII at Copenhagen. In 1851 he became teacher at the Cologne Conservatory and occupied at later times the positions of musical conductor at Barmen, academic musical director and conductor at the Singakademie at Breslau, conductor of the Gewandhaus concerts at Leipzig and teacher at the Conservatory. His compositions are refined and classic throughout, but possess here and there a marked touch of the romantic. He composed studies, sonatas, quartets, quintets and trios. A five-act grand opera, *König Manfred*, was produced in 1867, an operetta in 1874, and two three-act comic operas in 1886 and 1891 respectively. He became widely known as an excellent conductor, and as a pianist for his interpretations of Mozart.

**RELIGIOUS DENOMINATIONS.** Statistics and other information relating to the principal religious denominations will be found under their respective names in alphabetical order.

The religious census of the United States taken in 1906 was completed in 1910 by the publication of Volume 2, giving data relating to the separate denominations. Volume 1, issued in 1909, contained a summary and general tables of all the denominations. According to this census the whole number of communicants reported by all the religious bodies in 1906 was 32,936,445 of which 20,287,742 or 61.6 per cent. were returned by 164 Protestant bodies; 12,079,142 or 36.7 per cent. by the Roman Catholic Church and 569,561 or 1.7 per cent. by twenty-one other bodies. In considering figures showing the relative importance of the different bodies with respect to the number of communicants or members, it should be borne in mind that among the Jewish congregations, the Roman Catholic Church and the Protestant bodies, differences in the requirements for membership exist which prevent statistics based on membership from giving a correct index of the religious affiliations of the population of the United States. The Jewish congregation includes as members only the heads of families; the Roman Catholic Church includes as members all persons baptized into the church and it requires that all children of members shall be baptized as soon as possible

thereby themselves becoming members. The Protestant bodies as a rule admit only those who, after reaching fairly mature age, declare their desire to join the church.

Among the Protestant bodies, the Methodist bodies rank first in number of members with 5,749,838 or 17.5 of the total number. The Baptist bodies come next with 5,662,234 members or 17.2 per cent. These two bodies constitute somewhat more than one-third of the entire Protestant membership of the country.

The greatest percentage of increase in the decade 1890 to 1906 is shown by the Christian Scientists, who increased their membership 882.5 per cent. Next in order of relative increase are independent churches, 451.4 per cent. Among the larger Protestant denominations, Disciples of Christ or Christians showed the largest rate of increase, 78.2 per cent. The Protestant Episcopal Church showed an increase of 66.7 per cent.; the Methodist bodies, 25.3 per cent. and Baptist, 52.5 per cent. The Christians or Christian Connection showed an increase of 6.2 per cent. The Roman Catholic Church showed an increase of 93.5 per cent. The increase in all Protestant bodies in the decade was 44.8 per cent. The total value of church property of all denominations reported was \$1,257,575,867. Of this, the property value of the Protestant bodies was given at \$935,942,578. The increase in the value of the property from 1890 to 1906 was, in Protestant bodies, 70.3 per cent. and in all denominations, 35.1 per cent. See SOCIAL WORK OF THE CHURCHES.

The table at top of page 628 shows the number of communicants in 1906, and the rate of increase from 1890 to 1906, in each denomination.

**REUNION, or BOUBRON.** An island in the Indian Ocean; a French colony. Area, 965 square miles. Population (1907), 177,677. Capital, St. Denis, with 25,689 inhabitants; St. Pierre had 31,927; St. Paul, 20,091; St. Louis, 12,846; St. Benoît, 11,692. Schools (1909), 169, with 14,381 pupils. Sugar cane is the principal cultivated product, extending over 30,000 hectares. Next in importance is vanilla, 4000 hectares. Tobacco, manioc, coffee, cacao and spices are grown. Livestock (1898): 2345 horses; 2950 mules; 3495 cattle; 13,750 sheep and goats. There are no mines. Imports and exports in 1909 were valued at 13,233,483 and 16,351,853 francs respectively, against 11,812,627 and 15,179,074 in 1908. Sugar, rum, and tapioca are the chief exports. Railways (end of 1909), 126 kilometres (78 miles). Telegraph lines, 332 kilometres (206). In 1909, 87 vessels of 169,326 tons entered, and 88 of 171,679 tons cleared; in 1908, 109 vessels of 202,723 tons entered, and 106 of 197,165 tons cleared. The budget for 1909 balanced at

**RHOADES, LEWIS ADDISON.** An American scholar and educator, died August 30, 1910. He was born at Skaneateles, N. Y., in 1860, and graduated from the University of Michigan in 1884. He afterwards studied at the University of Göttingen. After having taught in the high schools at Ann Arbor, Michigan, he was appointed in 1888 instructor of German in the University of Michigan, remaining in this position until 1890. From 1896 to 1903 he was professor of German in the University of Illinois and from 1903 to the time of his death was professor of German in the Ohio State University. He wrote *Hölty's Verhältniss zur Englischen Litteratur* (1893), and was the joint author of Becker-Rhoades's *Elements of German* (1909). He edited many of the German classics.

**RHODE ISLAND.** One of the New England Division of the United States. Its area is 1248 square miles. Its capital is Providence.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 542,610 as compared with 428,566 in 1900 and 345,506 in 1890. The increase in the decade

1900 to 1910 was 26.6 per cent. This was the highest percentage of increase in any of the New England States. The State ranks thirty-eighth among the States in point of population, whereas in 1900 it ranked thirty-fifth. The population of the larger cities and towns will be found in the tables in the article *UNITED STATES CENSUS*.

**MINERAL PRODUCTION.** The mineral products of the State are not important and consist chiefly of stone. The value of the stone product in 1908 was \$556,474. This was almost entirely granite. The State is a large producer of mineral water, of which 594,208 gallons were produced in 1908. Among other mineral products produced in small quantities are coal products, graphite and talc.

**AGRICULTURE.** The acreage, production, and value of leading crops is given for 1909 and 1910 in the following table:

	Acreage	Prod. bu.	Value
Corn 1910 .....	11,000	440,000	\$365,000
1909 .....	11,000	365,000	354,000
Oats, 1910 .....	2,000	70,000	34,000
1909 .....	2,000	50,000	26,000

1909 .....	62,000	68,000	1,265,000

a Tons.

**EDUCATION.** The towns of Rhode Island established schools in an early period of its history, but the existing State system of schools had its beginning in early legislation of the nineteenth century. In all the elements of a State system, that of Rhode Island has become highly developed through increasing State sup-

port and direction. The average length of school years has been 194 days for several years. In 1910 out of a school population of 103,071 there were enrolled in schools 87,893 pupils, of whom 69,456 attended public schools. Seventy-five per cent. of the teachers have had professional training. The average annual salary of all teachers is \$655.00, it having increased \$185 in ten years. The State established a system of teachers' retirement pensions in 1907, which is supported wholly by a State appropriation. In 1910 there were 79 retired teachers on the pension roll receiving annually \$26,170.37. High schools are maintained in municipalities having ninety per cent. of the population and all towns are required to provide free secondary school education. The Rhode Island Normal School, the largest State Normal School in New England, is maintained at an annual expense of \$72,000. The Rhode Island State College, the Rhode Island School of Design and Brown University are the principal institutions for higher education. The State has 57 free public libraries, containing half a million volumes, in its 38 towns and cities, and in addition has important historical libraries and societies.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State with their populations in 1910 were as follows: State Hospital for the Insane, 1146; Workhouse and House of Correction, 271; Almshouse, 528; State Prison, 148; Providence County Jail, 337; Sockanosset School, 340; Oak Lawn School, 53. The cost of the maintenance of these institutions in 1910 was \$448,399. Of the 38 cities and towns in the State, 25 maintain almshouses and in the other 13 the dependents are supported in private homes or at the State Almshouse in Cranston. The School for Feeble-minded is under the control of the State Board of Education and is located at Exeter.

**POLITICS AND GOVERNMENT.** The State legislature was in session in 1910 as the sessions are annual. The chief measures passed will be found noted in the section *Legislation* below. On April 29, the Federal income tax amendment to the constitution was defeated. The most interesting and important event in the political history of the State from a national standpoint was the announcement made on April 18 by Senator Aldrich that he would not be a candidate for re-election. He gave as his reason, the condition of his health. Senator Aldrich has been for years one of the most prominent members of the United States Senate and was perhaps for the past two or three terms the strongest member of that body in influence and power. He was chairman of the Finance Committee which formulated the tariff bill in the Senate, passed in 1909. He was first elected to the Senate in 1881, having previously served several terms in Congress. This decision of Senator Aldrich makes it necessary for the legislature of 1911 to choose his successor. An event which was hardly less important in the political history of the State was the death on September 22 of General Charles R. Brayton (q. v.) who for many years was the chief political power in the State and practically a dictator in matters of Republican politics.

On August 16 the legislature convened in extra session to consider the report of the redistricting commission and changed the size of the lower branch of the assembly from 72 to 100 members.

**CONVENTIONS AND ELECTIONS.** The election in 1910 was for governor and other State officers and for members of Congress. The Democratic State Convention met at Providence on September 29. It was the largest Democratic convention ever held in the history of the State. The Convention nominated Lewis A. Waterman of Providence for governor and Philip E. Clarke of Newport for lieutenant-governor. For Congress, George F. O'Shaunessy of Providence and Thomas F. Cooney were nominated. The platform adopted by the convention denounced the Payne-Aldrich tariff, advocated election of United States Senators by the people, denounced "Cannonism" and advocated reapportionment of the State Senate according to population.

The Republican State Convention met at Providence on October 19. It renominated for governor Aram J. Pothier of Woonsocket, and for lieutenant-governor Zenas W. Bliss of Cranston. For Congress William Paine Sheffield of Newport was renominated and George H. Utter received the nomination in the second district. In its platform the convention endorsed the national administration and pledged to it its loyalty and support. It emphatically approved the Payne-Aldrich tariff bill and asked for investigation and discussion of its effect on State industries. It regretted the withdrawal of Senator Aldrich as a candidate for United States Senator, advocated fundamental changes in the taxation laws of the State, the establishment of a State department of taxation and approved various measures adopted and made effective during the Taft administration.

The campaign which followed these elections was one of the most aggressive in the history of the State. Although the State is normally Republican by a large majority Governor Pothier was re-elected by a plurality of only 1140 votes. He received 33,540 to 32,400 cast for Mr. Waterman, the Democratic nominee. Governor Pothier's plurality in 1909 was 11,769. The Democrats elected their candidate for Congress in the first district by a plurality of 1851, but in the second district the Republican candidate, Mr. Utter, was elected by a plurality of 5279. The entire Republican State ticket was elected.

**LEGISLATION.** Among the important measures enacted at the legislative session of 1910 were the following: The law relating to child labor was so amended that no child under 14 years of age may be employed in any factory or business establishment, and none under 16 years of age between the hours of eight at night and six in the morning, nor unless the child has a schooling certificate. The department stores of the State were unable to secure the Christmas time exemption, which occurs in a similar act passed by the New York legislature. A measure was enacted by which any person may be punished, who, having the care or custody of a child abandons, mistreats or neglects him or permits his home to become the resort of lewd, wanton or dissolute persons so that it becomes unfit for the child to live in. This act is applicable only to children under seven years of age. A law was passed providing that the commissioners of shell fisheries in the State shall make sanitary inspection of all shell fish grounds, draw up regulations and issue certificates of satisfactory condition. The factory inspection act was amended by adding several sections, providing for the inspection of bakeries, confec-

tionery and ice cream shops. All cooked foods are to be kept out of the dust while on sale or in transit through the streets. No basements below the street level are to be used for shops or bakeries. A law was enacted providing for factory inspection by a chief and four inspectors, one of whom shall be a woman. October 12 was made a legal holiday, to be known as Columbus Day. Important legislation was enacted relating to white slaves, as a result of the agitation carried on during 1900-10.

**STATE OFFICERS.** Governor, Aram J. Pothier, Republican; Lieutenant-Governor, Zenas W. Bliss, Republican; Secretary of State, J. Frederick Parker; Attorney-General, William B. Greenough; Treasurer, Walter A. Read; Adjutant-General, Frederick M. Sackett; Auditor, Charles C. Gray; Commissioner of Public Schools, Walter E. Ranger; Commissioner of Insurance, Charles C. Gray—all Republicans.

**SUPREME COURT.** Chief Justice, Edward C. Dubois; Associate Justices, Clark H. Johnson, C. Frank Parkhurst, John T. Blodgett, William H. Sweetland. Clerk of the Court, B. S. Blaisdell—all Republicans.

**STATE LEGISLATURE 1911.** Republicans, Senate, 25; House, 62; joint ballot, 87; Democrats, Senate, 13; House, 38; joint ballot, 51; Republican majority, Senate, 12; House, 24; joint ballot, 36. House and Senate each contains 2 Independents.

**RHODESIA.** An inland South Africa territory; a British protectorate. The natural division into Northern and Southern Rhodesia is made by the Zambezi River, and both are administered by the British South Africa Company.

**SOUTHERN RHODESIA** has a total area of about 144,000 square miles, and includes the two provinces of Matabeleland (capital, Bulawayo) and Mashonaland (capital Salisbury). European population (1907), 14,018; estimated 1910, about 18,000; natives (1907), 662,786. Bulawayo had (1907) 3491 white inhabitants; Salisbury, 1684. The plateaux are well adapted to the cultivation of cereals and vegetables; tobacco, rubber, and cotton are indigenous. The country is being re-stocked; and the prevalent veterinary diseases are being successfully checked by inoculation. The country is rich in minerals. Entire gold output from 1890 to December 31, 1909, 3,332,178 ounces, valued at £14,455,233; for the year ended December 31, 1909, £2,623,708. Output of silver (1890 to December 31, 1909), 991,235 ounces; copper, 316 tons; lead, 4595; coal, 757,622; chrome iron, 50,642; asbestos, 327; diamonds, 7020 carats. Total imports (1908), £818,372; exports, £2,614,496 (gold, £2,391,552; gold concentrates, £113,902; chrome ore, £31,098).

**RAILWAYS.** The main lines are the Mashonaland and the Rhodesia railways. The latter (a continuation of the line from Cape Town to Vryburg by way of Kimberley—the Cape-to-Cairo line) was opened to Bulawayo in 1897 (total distance from Cape Town, 1362 miles). A line connecting Salisbury with Bulawayo was completed in 1902 (300 miles); and from Salisbury the Mashonaland Railway runs to Beira in Portuguese East Africa via Umtali (375 miles). From Bulawayo the line to the Victoria Falls via the Wankie coal fields was completed in 1904 (281 miles). The line crosses the Zambezi at the Falls and has been opened to the Rhodesian border in N. W. Rhodesia,

with an extension in Congo territory to Elizabethville (Star of the Congo Mine) (distance from the Falls to the border, 507 miles). A light railway connects Salisbury with the Ayrshire mine (84 miles), with a branch to the Eldorado mine (12 miles). There is a line from Gwelo to Selukwe (23 miles); one from Bulawayo to West Nicholson via Gwanda (119); and a branch to the Matopos (9), where Cecil Rhodes is buried. A branch line from Lyndhurst Halt to Umduma (50 miles) was opened in June, 1909.

The African Transcontinental Telegraph Line (Cape-to-Cairo) has been constructed as far as Ujiji (German East Africa), about 3250 miles from the Cape. There are about 3000 miles of roads. Post-offices, 76. There is a post-office savings bank. Administrative revenue (1908-9), £551,789; expenditure, £524,471. Administrator for the Company (1910), Sir W. H. Milton.

**NORTHERN RHODESIA**, divided into North-Eastern (109,000 square miles) and North-Western Rhodesia (182,000 square miles), has an approximate population of 950 Europeans and 906,000 natives. N. W. Rhodesia (or Barotseland had (1908) imports and exports amounting to £120,029 and £118,326 respectively. Lealui is the residence of the native king, Le wanika. Administrator for the Company (1910), L. A. Wallace (acting), at Livingstone. Administrator of N. E. Rhodesia, Leicester P. Beaufort (acting), at Fort Jameson.

**RICE.** Rice production in the United States in 1910 was especially favored by good weather during harvest time. Only a very small percentage of the crop was reduced in quality by unfavorable weather conditions, and the quality in general was higher than for several years. In western Texas the acreage was smaller than usual and the yields were comparatively light; and in parts of southwestern Louisiana and along the Mississippi River in that State the crop was also not fully satisfactory. The yield in South Carolina was considerably smaller than last year but the quality was about the same.

The United States produced in 1910, 24,510,000 bushels on 722,800 acres, the average yield per acre being 33.9 bushels. This is the largest crop ever produced. Last year, when the crop exceeded the average of the previous five years by 25 per cent. the total yield was 24,368,000 bushels from 720,225 acres, the average yield being 33.8 bushels per acre. The leading States and their production in 1910 were as follows: Louisiana 12,769,000; Texas, 8,738,000; Arkansas, 2,400,000 and South Carolina, 357,000 bushels. Texas produced over 1,000,000 bushels less and South Carolina over 100,000 bushels less than the year before. The price of rice has declined since 1909, and the total value of the crop of 1910 is about 2 per cent. below the five-year average.

The world's production of rice is between three and four billion bushels, about one-half of which is grown in China. In Mexico rice culture is on the increase, especially in the southern part where a large and growing area of Honduras rice has been established during recent years.

The rice production of Japan for 1910 was 324,023,600 bushels, or about 41,000,000 bushels less than in 1909. Japan grows about 7,000,000 acres of rice each year, or about seven times the area in wheat.

The World's Rice Production in 1909 and 1910 is as follows:

Countries	1909	1910
	<i>Bushels</i>	<i>Bushels</i>
United States .....	24,324,400	24,464,100
Spain .....	10,140,300	10,323,600
Italy .....	23,242,100	21,417,200
Japan .....	365,397,700	324,023,600
Bulgaria .....	253,400	782,400

The above figures are taken from the Bulletin of Agricultural Statistics, International Institute of Agriculture, Rome, and are in part final and in part preliminary data.

The rice farmers of Louisiana and Texas organized in 1910 the Southern Rice Growers Association, for the purpose of contracting for the selling of rice with individual farmers only. The association is to receive 10 cents a bag commission and to spend at least 2 cents per bag in advertising rice. An older organization, known as the Rice Association of America, has nothing to do with the handling of rice, but directs its efforts towards the collection of rice statistics and the dissemination of information regarding the value and uses of rice for food. In many rice-growing sections in the United States the practice of growing rice continuously is gradually giving way to a diversified system of rice farming. See *BERIBERI*.

**RICE, CALE YOUNG.** See *LITERATURE, ENGLISH AND AMERICAN, Poetry and Drama*.

**RICHARDS, WILLIAM ROGERS.** An American Presbyterian clergyman, died January 7, 1910. He was born in Boston in 1853, and graduated from Yale College in 1875. In 1875-6 he studied at the Columbia Law School, and graduated from the Andover Theological Seminary in 1879. In the same year he was installed as pastor in the Central Congregational Church of Bath, Me., serving in this position until 1884, when he became pastor of the Crescent Avenue Presbyterian Church of Plainfield, N. J. Here he remained until 1902 when he was called to the Brick Presbyterian Church as successor to Dr. Maltbie D. Babcock. Dr. Richards was a fellow of the corporation of Yale University and was for many years one of the college preachers in the college pulpit. He was a director of Union Theological Seminary and a member of the Presbyterian Board of Foreign Missions. He was author of *Ways of Wisdom* (1886); *For Whom Christ Died* (1902); *God's Choice of Men* (1905); and *The Apostles' Creed in Modern Worship* (1906).

**RIDDLE, GEORGE.** An American Shakespearean reader died November 26, 1910. He was born in Charleston, Mass., in 1851 and graduated from Harvard College in 1874. In the same year he made his first appearance as a reader in Boston. From 1875 to 1878 he was an actor on the stage, playing with Edwin Booth and other well-known actors. He was instructor in elocution in Harvard College from 1878 to 1881. From the latter date until the time of his death he appeared in Shakespearean and other readings in the principal American cities and attained a wide reputation as an elocutionist and interpreter of Shakespeare. He edited *A Modern*

*Reader and Speaker* and *George Riddle's Readings*.

**RINDERPEST.** Cattle plague, or Rinderpest the German name by which it is more commonly known, is the most fatal disease affecting cattle, in ordinary cattle the mortality varying from 90 to 95 per cent. It occurs endemically in China, India, and southern Russia, occasionally being introduced into the other countries of Europe and Asia as well as into Africa. In many instances it has been confounded with other diseases of cattle, especially in South Africa, where a number of diseases of a somewhat similar nature occur. The loss caused by this disease prior to the introduction of preventive inoculation was enormous. The total loss in Europe up to the end of the eighteenth century has been estimated at 300 million head. During the great epizootic in Africa in 1896 and 1897, 80 to 90 per cent. of the whole of the cattle of the country succumbed to the disease. The last outbreak to occur in South Africa was in 1902, but great losses have since been caused by East Coast fever. In Turkey, three great outbreaks occurred from 1896 to 1899, 70 to 80 per cent. of the affected cattle dying. In the Philippines it has caused the loss of many thousands of cattle and caribou and still exists in many parts of the Islands, new outbreaks frequently occurring. It nearly disappears during the dry season only to spring up in widespread epidemics soon after the beginning of the rainy season. In the United Provinces in India during the year ending March 31, 1910, 1771 deaths, or 66 per cent. of the total mortality among cattle from contagious diseases was due to Rinderpest. In Eastern Bengal and Assam it was the cause of 28,860 deaths during the year ending March 31, 1910, against 44,126 the previous year.

The symptoms are those of a severe, acute infective disease in which the digestive tract is the chief point of attack, the period of incubation varying from three to seven days. The causative agent occurs in all the secretions and excretions of the body; while ultraviolet it appears to be retained by the more porous Chamberlain filters.

Treatment consists of a strict quarantine, disinfection, and the application of immunizing agents. In a country where rinderpest is endemic a large percentage of the cattle are usually found to be immune to the disease; in India this immunity at times is found to be 50 per cent. and over. By Koch's bile method, which consists of an injection into the non-immune animal of 10 cc. of bile taken from an animal suffering from, or one that has passed through an attack, an immunity may be conferred which will last for several months. Three forms of serum immunization, the serum simultaneous, the deferred virulent blood and the serum alone methods are now practised. It is said that by the serum simultaneous method about 90 per cent. of the cases treated display an immediate permanent immunity.

In India in 1908-9, 627,349 doses of serum were inoculated. Of 38,153 animals inoculated in Bengal and Assam during 1909-10 by the serum alone method, 339 deaths were reported. The 43,377 inoculations made in the United Provinces in India, 1909-10, were chiefly for this disease.

**RINEHART, MARY ROBERTS.** See *LITERATURE, ENGLISH AND AMERICAN, Fiction*.

**RISING, WILLARD BRADLEY.** An American chemist, died February 9, 1910. He was born at Mechlenburg, N. Y., in 1839 and graduated from Hamilton College in 1864. He studied at the University of Michigan and at Heidelberg University in Germany. In 1866-67 he was instructor in chemistry at the University of California and from 1867 to 1869 was professor of natural science in that institution. In 1872 he was made professor of chemistry and retained that position until his death. From 1885 until his death he was State analyst of California and was also adviser and chemist of the State Board of Viticulture and State Board of Health. His specialty was thermal chemistry and in this branch he made a number of important discoveries. He also devoted much attention to the study of explosives and rendered important service in this field. He was a member of the jury of award at the World's Columbian Exposition in 1893 and at the Paris Exposition in 1900.

**ROBINSON, Sir CLIFTON.** An English engineer, died November 6, 1910. He was born in Birkenhead, England, in 1848 and received a scientific and engineering education. As a youth he joined the engineering staff of George Francis Train, who had built the first tramway in Europe at Birkenhead. Mr. Train brought him to America in 1866 as one of his employes in street railway construction. After spending five years in New York and other American cities, he returned to London and at the age of 23 undertook the laying of street car lines in Cork, Ireland. Four years later he became general manager of the Bristol tramways, and later manager of the tramways of Edinburgh. In 1884 he began the building of the Highgate Cable Tramways. He returned to America where he superintended the construction of a system of traction for Los Angeles, Cal. He then designed and constructed the London United Electric Tramway System and in 1895 constructed the first electric tramway at Bristol. As managing director and engineer of the Imperial Tramways Company he constructed and reorganized the Dublin Southern District Electric Tramways in 1896, and the Middlesborough, Stockton and Thornaby Electric Tramways in 1898. In 1902 he took part in the construction of the great tube railway system of London and in 1906 designed and put into operation a successful system of through bookings between tramways and railways. He was engaged by the American Street Railway Association in 1889 to report on the general situation in regard to street railways in the United States. His report was presented at the convention of the Association at Pittsburgh in 1891. In 1904 he became managing director of the United Tramways Company of

London. He succeeded in converting it into an electric system against considerable opposition. At the time of his death he was in New York City on his way to inspect a railway proposed in Newfoundland. In 1905 he was knighted by King Edward for his service in connection with the underground and other transit lines of London. He was the author of several treatises on tramways. For one of these, *The World's Tramways*, he received the silver medal of the Society of Arts in 1902. He contributed many papers on tramways and kindred subjects to technical journals.

**ROBINSON, FRANKLIN CLEMENT.** An American chemist and educator, died May 25, 1910. He was born at East Orrington, Me., in 1852 and graduated from Bowdoin College in 1873. He was assistant in chemistry at Bowdoin in 1874. From 1875 to 1878 he was instructor of chemistry and mineralogy and from 1885 to the time of his death was professor of chemistry and mineralogy. He was State Assayer of Maine and was a member of the State Board of Health. His most notable achievement was the invention of a disinfecting apparatus the first ever produced that was feasible in using formaldehyde as a disinfectant. As an expert on the stomach, practically every case in the State in which there was a suspicion of poisoning was sent to him and for years he had appeared as the State's expert in murder trials. He was the author of *The Metals* (1878), *Qualitative Analysis* (1897). He contributed to the *American Chemical Journal* and other scientific periodicals.

**ROD, LOUIS EDOUARD.** A French writer, died January 29, 1910. He was born at Nyon, Switzerland, in 1857. He studied at his native town and at Lausanne, and afterwards attended the universities of Bonn and Berlin. In early manhood he went to Paris and there, in 1879, published a pamphlet defending Zola's school of realism. In 1884 he became editor of *La Revue Contemporaine*. In 1887 he was chosen professor of comparative literature at the University of Geneva, but soon resigned this position. His first novels were naturalistic in tone. The first, *Palmyre Veulard*, was published in 1881. The realistic tendency appeared in several other novels, but in *La course à la mort*, which was published in 1885, he abandoned the field of realism and produced a philosophical novel in the form of an autobiography, which showed the influence of Schopenhauer's pessimism. In 1896 he published a defense of Wagner against his French detractors. His *Le sens de la vie*, which appeared in 1888, was in a more optimistic vein than his earlier works. His most significant work in the field of criticism was *Les idées morales du temps présent*. In 1899 M. Rod came to the United States at the invitation of the Cercle Français of Harvard University, and lectured at Cambridge on the history of French dramatic poetry. During this visit he made a tour of American colleges. In his writings, M. Rod drew his characters chiefly from the plain people of the lower middle classes, in which he made intimate studies. He was a lover of American literature, particularly of

the poems of Poe and Whitman. Among his best known works are the following: *Michel Tessier* (1893-94); *Les rochers blancs* (1895); *Pastor Naudie's Young Wife* (translated 1899); *Au milieu du chemin* (1900); *L'inutile effort* (1903); *Un vainqueur* (1904); *L'indocile* (1905); *L'ombre s'étend sur la montagne* (1907); *Le réformateur* (1906); *Dante* (1891); *Stendhal* (1891); *Les Allemands à Paris* (1890); and *Études et nouvelles études sur le XIXème siècle* (1888 et seq.).

**ROELKER, CHARLES RAFAEL.** A rear-admiral retired, of the United States Navy, died September 28, 1910. He was born at Osnabrück, Hanover, Germany, in 1841. He entered the United States naval service as third assistant engineer in 1862, and in 1864 was promoted to second assistant engineer. From 1865 to 1869 he served in the bureau of steam engineering of the Navy Department and was promoted to be first assistant engineer in 1868, and 1890 became chief engineer. In 1899 he was promoted to be commander, and in 1902 was made captain. He was transferred to the list of rear-admirals on the retired list in 1903.

**ROENTGEN RAYS.** See PHOTOTHERAPY.

**ROLFE, WILLIAM JAMES.** An American Shakespearean scholar and educator, died July 7, 1910. He was born at Newburyport, Mass., in 1827 and graduated from Amherst College in 1849. He taught for a time in Maryland, and was afterwards head master in high schools at Dorchester, Lawrence, Salem and Cambridge, Mass., for a period from 1852 to 1868. In the latter year he gave up teaching and became the editor of the *Popular Science News* and afterwards of the Shakespearean Department of the *Literary World* and the *Critic*. Early in his career he edited selections from Ovid and Vergil, and in collaboration, *The Cambridge Course of Physics*, 6 vols. (1867-68). Dr. Rolfe, however, was best known as a Shakespearean scholar. It is probable that he did more for the popularization of Shakespeare than any other American scholar. His edition of Craik's *The English of Shakespeare*, brought out more than forty years before his death, was reprinted many times. He wrote and compiled a dozen volumes on Shakespeare as man and dramatist. Turning his attention to a later period he brought out scholarly editions of Milton, Goldsmith, Scott, Wordsworth, Macaulay, Tennyson and Browning. He was a notable linguist being master of six or seven languages. Dr. Rolfe was a frequent contributor on philological and other subjects to American and foreign periodicals. From 1870 to 1873 he prepared a complete edition of Shakespeare which in 1903-7 was revised. From 1904 to 1908 he was president of the Emerson College of Oratory in Boston. Among his published writings, in addition to those mentioned above are *Select Poems of Goldsmith* (1875), of *Gray* (1876), of *Tennyson* (1884), *Mrs. Browning's Sonnets from the Portuguese* (1887), *Minor Poems of Milton* (1887), *Select Poems of Wordsworth* (1889), *Macaulay's Lays of Ancient Rome* (1888), *Select Dramas of Robert Browning* (1887), *Tales of Chivalry* (1887), *Tales from English History* (1888), *Fairy Tales* (1889), *Tales from Scottish History* (1891), *Lamb's Tales from Shakespeare* (1892), *Complete Edition of Tennyson*, 12 vols. (1895-1898). He was also the author of *Satchel Guide to Europe*, revised yearly from 1892 to 1897, *Shakespeare as a Boy* (1896), *Life of*

*Shakespeare* (1902) and *Shakespeare Proverbs* (1908).

**ROLLAND, ROMAIN.** See FRENCH LITERATURE.

**ROLLS, CHARLES STEWART.** An English aviator and scientist killed while flying July 12, 1910. He was born in London in 1877 and was educated at Eton and Trinity College, Cambridge. Following his graduation he specialized in practical electricity and graduated in engineering in 1898. He was the pioneer of the introduction of automobiles into England in 1896, and competed successfully in numerous competitions and races in England and on the Continent. He drove his car as representative for Great Britain in the Gordon-Bennett race in 1905, and has several times established the world's record for speed. He was early interested also in aeronautics and made 160 ascensions in balloons, and when the development of aeroplanes began he was one of the first among his countrymen to take active interest. After having taken lessons from Wilbur Wright, he made his first flight with the latter at Le Mans, France, in October, 1908. He was the first Englishman to cross the English Channel in an aeroplane, and accomplished the feat after having failed once, on June 2, 1910. He flew from Dover to Calais and back again without stopping, accomplishing the round trip of forty-two miles in ninety minutes. He read and lectured much on mechanics and aviation. He was a captain in the London section of the Army Motor Reserve, was managing director of Rolls-Royce, Ltd., British motor car manufacturers. He wrote chapters on motor cars and road locomotion for the *Encyclopædia Britannica* and the *Badminton Library*.

**ROMAN CATHOLIC CHURCH.** The religious census of the United States, taken in 1906 and published in its final form in 1910, gives the total number of Roman Catholic communicants in the United States in the former year as 12,079,142. As the church includes among its communicants all members of families who have been baptized, it cannot be fairly compared with the communicants of Protestant churches where only those actually identified with the churches are reckoned as communicants. In this census, however, 15 per cent. of the actual enumeration was deducted to cover children under nine years of age, this being the age at which the first communion is usually taken. According to these statistics, the total number of church edifices under the direction of the church was 11,881 with 10,303 organizations. The church property was valued at \$292,638,787. The Sunday schools as reported by 9406 organizations numbered 11,172 with 62,470 officers and teachers and 1,481,535 scholars. The number of clergy connected with the denomination, including archbishops, bishops, diocesan and regular priests, was 15,177. These figures may be compared with those contained in the official *Catholic Directory* which gives the figures at the close of 1910. According to these statistics there was at that time a Roman Catholic population of 14,618,761. The churches numbered 13,461 of which 9017 were churches with resident priests and 4444 were mission churches. The clergy numbered 17,084 of whom 4434 were religious and 12,650 were secular. The hierarchy of the church is composed of one cardinal, 13 archbishops and 97 bishops. The

seminaries numbered 82 with 6969 students; colleges for boys, 225; academies for girls, 696, and the parishes with schools 4972, with an attendance of 1,270,131 scholars.

The special activities of the Roman Catholic Church, missionary, educational and philanthropic are, for the most part, carried on in detail by the various religious orders, including the brotherhoods and sisterhoods. The home missionary work of the church, corresponding to the home missionary labors of the chief Protestant bodies, is less an organized work for church extension than a series of evangelistic or revival services which are called "missions." These missions have for their purpose the revival of religious interest in Roman Catholic communities and the conversion of non-Catholics. The Paulist Fathers, whose headquarters are in New York City, have as their especial province the conduct of missions with a view to the conversion of non-Catholics to Roman Catholicism. Among other orders especially interested in mission work are the Augustinian Fathers, the Benedictine Fathers, the Capuchin Fathers, the Jesuit Fathers, the Redemptorist Fathers, the Vincentian Fathers, the Dominican Fathers and the Passionist Fathers. The Commission for Catholic missions among the colored people and Indians carries on the work indicated by its title and the Catholic Church Extension Society seeks to develop the missionary spirit and to assist in the erection of parish buildings for needy communities. The philanthropic work of the church is highly developed. The most prominent single organization is a society of laymen, the Society of St. Vincent de Paul, with main offices in Paris and branches in all parts of the world. The Roman Catholic Church in the United States carries on no distinctively foreign missionary work, but contributes to the work done in various fields by the different orders and societies. The principal medium is the Society for the Propagation of the Faith with headquarters in France and a number of branches in the United States.

**EUCCHARISTIC CONGRESS.** The most important event in the history of the church during 1910 was the Eucharistic Congress held in Montreal September 7-11. Its official title is the International Catholic Eucharistic Congress. This is the first time that this Congress has ever assembled in America. Cardinal Vannutelli was present as Papal Legate, and Cardinal Logue came from Ireland to attend the Congress. Cardinal Gibbons represented the highest Catholic authority in the United States. Great preparations had been made in Montreal for the Congress and great crowds of people were drawn to the city for its sessions. It met for organization in the great Cathedral of St. James and subsequent meetings were held in other church buildings. Sectional meetings for Irish, French, Italian and other branches of the church were provided. One of the sessions of the Congress was addressed by Sir Wilfrid Laurier, the Canadian Premier. At an imposing mass in the open air over 5000 priests and prelates and many thousands of people were present. It was estimated that nearly 200,000 members of Catholic churches were gathered in the city during the sessions of the Congress, while bishops and archbishops to the number of 135

came to Montreal from all parts of the world.

**CONSECRATION OF ST. PATRICK'S.** In the same month, St. Patrick's Cathedral in New York City was consecrated with impressive ceremonies, in which Cardinal Gibbons, Cardinal Logue and Cardinal Vannutelli, as well as many other distinguished prelates who had attended the Eucharistic Congress, took part. The Cathedral was dedicated in 1879 but could not be consecrated until it was free from debt. Final payment on the debt was made in 1910.

**THE CHURCH IN FOREIGN COUNTRIES.** The modification of the Coronation Oath taken by George V, of Great Britain, by which objectionable matter relating to the Roman Catholic Church was omitted, was the cause of great satisfaction to Roman Catholics and Protestants throughout the world. The controversy between the Vatican and Spain, which forms the most important part of the year's history in the latter country, will be found discussed in the article **SPAIN**. In Germany the government seemed disposed to defend the scientific freedom of all professors connected with state universities and in deference to this attitude the Vatican has deemed it wise to abate, with regard to them, some of the restrictive and odious measures imposed on Catholic professors elsewhere.

In France, one of the most interesting events of the year was the condemnation by the Vatican of the movement called *Le Sillon*, represented by a newspaper of that title. The original purpose of this association was to train a body of thinking men able to exert a certain moral influence and to lead a vigorous social propaganda. Its activities have included the foundation of people's institutes and the holding of public meetings. At the time of its founding the clergy showed itself enthusiastic over the idea. On the occasion of the second national congress of the study-circles of people's institutes, *Le Sillon* received from Cardinal Rampolla, Secretary of State to Pope Leo XIII, and from other prelates, letters praising the work. The programme of the movement includes legislative action, economic action and moral action. Through some of its members *Le Sillon* has exerted a deep influence on labor exchanges and it has fought the sweating system, night work in bakeries and other abuses of the laboring classes.

Opposition to the work of the organization came from Royalist endeavors to discredit it in the minds of Catholics by questioning the orthodoxy of its members and its attitude toward the religious hierarchy. The *Sillonists* replied that, while the organization had been founded and was directed by faithful Catholics, it was nevertheless a lay organization aiming at temporal results. In spite of this the attacks continued and *Le Sillon* was finally condemned by the Vatican. For other events in France, see **FRANCE**.

**MODERNISM.** During the year there were issued from the Vatican two Pontifical documents concerning Modernism. The first of these, the *Edita* of May 26, renewed previous condemnation of certain books; the *Sacrorum Antistitum* on September 1 inveighed against modernist obstinacy and specious cunning. After quoting the practical measures prescribed in the Encyclical *Pascendi*, the Pope urged their execution but at the same time made new directions concerning the forma-

tion of the clergy in seminaries and religious houses. Candidates for higher orders, newly appointed confessors, preachers, parish priests, canons, beneficed clergy, the bishop's staff, Lenten preachers, officials of the Roman congregations or tribunals, superiors and professors in religious congregations, all are obliged to swear according to a formula which reprobates the principle of modernistic tenets. The list of the documents issued by the Pope relating to Modernism is given as follows in Volume 10 of the *Catholic Encyclopædia*, published in 1910: First, the Pope's Address of April 17, 1907, to the newly created cardinals. This is a résumé which anticipates the Encyclical *Pascendi*, second, a letter from the Congregation of the Index, April 29, 1907, to the Cardinal Archbishop of Milan with regard to the review, *Il Rinnovamento*. This letter mentions the names of Fogazzaro, Father Tyrrel and other modernists; third, a letter from Pius X sent on May 6, 1907, to the archbishops and bishops, and to the patrons of the Catholic Institute of Paris. This letter urges the restoration of sacred studies and of Scholastic philosophy. Fourth, the decree *Lamentabili* of the Holy Office, July 3 and 4, 1907, condemning sixty-five distinct propositions. Fifth, the injunction of the Holy Office of August 28, 1907, which, with a view to remedying the evil of Modernism, enjoins certain prescriptions upon bishops and certain superiors of religious orders. Sixth, the Encyclical *Pascendi*. Seventh, three letters of the Cardinal Secretary of State October 2, 10 and November 5, 1907, on the attendance of the clergy at secular universities. Eighth, the condemnation by the Cardinal Vicar of Rome of the pamphlet *Il programma dei Modernisti* and a decree of October 29, 1907, declaring the excommunication of its authors with special reservations. Ninth, the decree *Motu Proprio* of November 18, 1907, on the value of the decisions of the Biblical Commission and on the decree *Lamentabili* and the Encyclical *Pascendi*. These two documents are again confirmed and upheld by ecclesiastical penalties. Tenth, the address by the Consistory of December 16, 1907. Eleventh, a decree of the Holy Office on February 13, 1908, in condemnation of the two newspapers *La Justice Sociale* and *La Vie Catholique*. The documents issued in 1910 have already been referred to above.

**ROOSEVELT, THEODORE.** Twenty-sixth President of the United States. Before his retirement from the Presidency in 1909 Mr. Roosevelt announced that on the expiration of his term he would go to Africa on a hunting expedition, and for the purpose of collecting specimens in natural history. The expedition was to be known as the Smithsonian African Expedition; but no part of its expenses were appropriated, either from the funds of the Institution or from any government appropriation. They were paid entirely by private subscription. During Mr. Roosevelt's last months in the White House preparations were made for the expedition so that at the time of his retirement on March 4, 1909, they were practically complete. He chose to accompany him his son Kermit Roosevelt, Dr. Edgar A. Mearns of the United States Army, Edmund Heller, and J. Alden Loring. A short time previously Mr. Roosevelt had made the an-

nouncement that he had joined the staff of the *Outlook* magazine as Contributing Editor and that hereafter all his official utterances would be made through that periodical. He had also contracted with *Scribner's Magazine* to publish a series of articles on the African expedition, to be known as *African Game Trails*.

He sailed with his companions from New York City on March 24th and after a brief stop in Naples reached Mombasa, British East Africa, on April 21, 1909. Here he spent eight months collecting the specimens native to that region and afterwards proceeded through Uganda and down the White Nile to Khartum, where he arrived on March 14, 1910. During his stay in the hunting fields, field work was energetically prosecuted in all parts of the regions visited, and ample notes were made of its fauna. The collections gathered by Mr. Roosevelt and his assistants will be found described in the article **SMITHSONIAN INSTITUTION**.

Mr. Roosevelt spent several days at Khartum where, under the guidance of Slatin Pasha, the governor, he inspected the places of historic and general interest. Here also he made an address to the soldiers in the garrison and others. Leaving this city he reached Cairo on March 24. Here great preparations had been made for his arrival both by the British officials and the people. On March 28 he addressed the students of the University of Egypt. He strongly commended the British rule and denounced the murder of Boutros Pasha, the Premier, which had occurred several weeks previous to this.

He left Egypt in the latter part of March and on April 1 reached Rome. Here an unfortunate incident occurred as a result of a misunderstanding between him and representatives of the Pope. Mr. Roosevelt had several weeks before written to the Papal authorities requesting an interview with Pius X. On March 25, the American Ambassador at Rome sent a dispatch to Mr. Roosevelt then at Cairo which contained the following communication from the Rector of the American College in Rome: "The Holy Father will be delighted to grant an audience to Mr. Roosevelt on April 5 and he hopes nothing will arise to prevent it, such as the much regretted incident which made the reception to Mr. Fairbanks impossible." This allusion was to the fact that Vice-President Fairbanks during a visit to Rome had made an address before the Methodist Episcopal Mission, between which and the Papal authorities there has been for years a feeling of bitter hostility, due, it is alleged by Catholic authorities, to attempts on the part of the Methodists to proselyte among adherents of the Roman Catholic Church. The Ambassador accompanied this dispatch with another in which he implied that the communication from the Vatican contained a covert threat. Mr. Roosevelt at once replied as follows: "It would be a real pleasure to me to be presented to the Holy Father, for whom I entertain a high respect, both personally and as the head of a great church. I fully recognize his right to receive or not receive whomsoever he chooses for any reason that seems good to him and if he does not receive me I shall not for a moment question the propriety of his action. On the other hand, I in turn must decline to make any stipulations or to submit to any conditions which in any way limit my conduct. I trust that on April 5 he will find it convenient to receive me." On receiving this the Ambassador at

once sent a final dispatch which ended by quoting the Rector of the American College at Rome as saying that "an audience could not take place except under the understanding expressed in the former message." This, so far as Mr. Roosevelt was concerned, terminated the affair, but it was made the subject of much newspaper discussion, which in general supported the position that he had taken. In the United States his conduct was approved alike by Roman Catholics and Protestants. It may be mentioned that Mr. Roosevelt had received no invitation from the Methodist mission to make an address before it, nor had he expressed any desire or intention to make such an address. As a result of these complications, the intended reception to Americans at the Embassy was omitted. On April 4, Mr. Roosevelt was the guest of the King and Queen of Italy.

Leaving Italy, he was received on April 15 by Francis Joseph, Emperor of Austria-Hungary, at Vienna. He was received in this city with the same enthusiasm which was displayed on his arrival in other cities during the entire tour. He visited Budapest where he was ardently greeted by the Hungarians.

Arrangements had been made for the delivery of a formal address at the Sorbonne in Paris on April 23. This address was entitled "Citizenship in a Republic" and embodied with great frankness Mr. Roosevelt's well known views of civic and social duties. It was well received in France and throughout Europe generally. On April 29, Mr. Roosevelt was the guest of the Queen of Holland and on May 2 he journeyed to Copenhagen where he was entertained by the Danish Crown Prince. On May 4 he was the guest of the King and Queen of Norway and on the following day spoke on the subject of International Peace, at Christiania. This was the Nobel Prize address.

After leaving Norway he went to Berlin where he was the guest of the German Emperor. Mr. Roosevelt, in company with the Emperor, viewed manoeuvres of the German army, an honor rarely vouchsafed to any foreigner. On May 12 he lectured before the Berlin University on "The World Movement." The death of King Edward which occurred on the day following the Christiania address necessitated a change in the plans for the entertainment of Mr. Roosevelt in Berlin and London. In consequence of his own request, the German Emperor cancelled the arrangements for all official functions in his honor and received him privately.

Great preparations had been made for a notable reception in England, but the death of King Edward put an end to this. Mr. Roosevelt arrived in England on May 16 and at once visited the bereaved Queen and King George. Shortly after his arrival he received a request from President Taft to act as official representative for the United States at King Edward's funeral. This he at once accepted, and he attended the services as a formal representative of his country. On May 26 he received the degree of Doctor of Laws from the University of Cambridge, where he made a brief address. The most notable event of his stay in England, however, was an address delivered on May 31 at the Guildhall on the occasion of his receiving the freedom of the city. The address was devoted almost entirely to the subject of Great Britain's responsibilities in Egypt, and the frankness of the utterances was startling alike to his auditors

and to the British public at large. His advice and admonitions, however, were for the most part received in good part (see article *EGYPT, History*). On June 7 he delivered the most important of his formal addresses at Oxford University. This was entitled "Biological Analogies in History" and it was a remarkable illustration of Mr. Roosevelt's versatility. It showed evidences of profound study and a wide acquaintance with all that had been previously written bearing on the subject. Shortly after this, Mr. Roosevelt's stay in England terminated and he sailed for the United States.

As his arrival in his own country drew near, the question of his attitude toward political questions which were at that time before the people became the chief topic of discussion on the part of the public and the press. In particular, his attitude toward President Taft and the administration was a matter of interest. He had declared that his interest in politics was only that of a private citizen and that he intended to take no prominent part in active politics. During his stay in Italy, however, he had been visited by Gifford Pinchot, the deposed Chief of the Forestry Bureau and one of Mr. Roosevelt's most intimate friends. It was assumed that Mr. Pinchot had told his side of the forestry controversy, and although Mr. Roosevelt had made no discussion of the subject, it was well known that his sympathies were with Mr. Pinchot's policies of conservation.

Mr. Roosevelt arrived in New York City on June 18. Here he received a remarkable ovation. He was welcomed by the officers of the city, and hundreds of thousands of people gathered to welcome him back to his own country. In response to a speech of welcome by Mayor Gaynor he made a brief reply. He went at once to his home at Oyster Bay, L. I. Mr. Roosevelt made a visit to President Taft who was then at his summer home at Beverly, Mass., shortly after his arrival in New York. This visit was a matter of a great deal of anticipation as an evidence of the relations which existed between the two men. Although nothing definite was known to indicate that their feeling of cordiality toward each other had changed, yet the well known sympathy which Mr. Roosevelt felt and had displayed toward certain of those who were opposed to the President's policies created the general impression that relations between them had become somewhat strained. Those who witnessed the meeting saw no lack of apparent warmth of feeling.

Mr. Roosevelt's declared intention to keep out of active politics was brought to a sudden termination. He attended the annual commencement at Harvard University in June and there he met Governor Hughes who urged him to give a public expression sympathetic to the latter's attempt to have direct nomination laws passed through the legislature. (See *NEW YORK*.) Mr. Roosevelt did this and from this time until election day in November he was actively engaged in the campaign either in consultation with politicians of all types or in making aggressive speeches in several States. His activity in politics is a part of the political history of the year and it is related in the political histories of the different States, especially New York, Connecticut, Ohio, Indiana, and Kansas. Mr. Roosevelt in the political campaign was found for the most part on the side of the progressive element of the party. In September he

made a tour through the West, speaking in aid of Senator Beveridge of Indiana and making speeches in other States. He attended a frontier celebration at Cheyenne, Wyoming. In Kansas he spoke on broad national policies; in Denver on the problems of lands, forests and natural resources; and in St. Paul, where he attended the Conservation Congress, he spoke on the phases of public policy which have to do with the country's treatment of its own Federal domain. As a result of a speech made at Osawatimie, Kansas, the phrase "new nationalism" became current as a statement of national policies which Mr. Roosevelt believed should be carried out (see *NEW NATIONALISM*). He finished the campaign in New York State where he made a number of addresses in favor of the Republican nominee, Henry L. Stimson. The results of the campaign as they concern Mr. Roosevelt will be found discussed in the section *Campaign and Elections of 1910* in the article *UNITED STATES*. Following the election he returned to his home in Oyster Bay and continued his work as a contributing editor of the *Outlook*. His book, *African Game Trails*, was published during the year.

**ROWING.** The intercollegiate regatta held on the Hudson River, near Poughkeepsie, in June, resulted in another Cornell triumph. For the second successive year the Ithacan crews captured all three events. The magnificent showing made by Pennsylvania, which finished second in the 'varsity eight-oared race, was a surprise to the experts most of whom had figured that Columbia would prove to be Cornell's most dangerous rival. The bitterness of the struggle between Cornell and Pennsylvania for first honors is shown by the fact that the Cornell crew crossed the finish line only two seconds ahead of Pennsylvania. The winning crew was composed of C. N. Seagrave, bow; L. D. Stimson, 2; C. W. Wakely, 3; W. M. Aitchison, 4; S. H. Sutton, 5; P. L. Day, 6; S. Names, 7, and E. F. Bowen, stroke. The time of the various eights follows: Cornell, 20 minutes 42½ seconds; Pennsylvania, 20 minutes 44½ seconds; Columbia, 20 minutes 54½ seconds, Syracuse, 21 minutes 1½ seconds; Wisconsin, 21 minutes 15½ seconds. In the 'varsity four-oared event Cornell and Syracuse were the contestants for first place, the former pulling away in the last half of the race. The order of finish and the times of the various crews were: Cornell, 11 minutes 37½ seconds; Syracuse, 11 minutes 43½ seconds; Columbia, 11 minutes 48½ seconds; Pennsylvania, 12 minutes 22 seconds. Cornell's third victory was in the freshmen eight oars, the Ithacan crew covering the two miles in 10 minutes 40½ seconds. The Columbia youngsters were second, their time being 10 minutes 53½ seconds and Syracuse finished last in time only two seconds slower, Wisconsin finished last.

The annual races between the Harvard and Yale crews were held as usual on the Thames River, near New London, Conn. Harvard repeated its success of the previous year by making a clean sweep of all the events. In the 'varsity eight oars Harvard for the third year in succession was the victor. The Yale 'varsity made a very poor showing in 1910, being beaten by ten lengths. Harvard's time 20 minutes 46½ seconds was four seconds slower than Cornell's in the same event on the Hudson. Yale covered the four miles at 21 minutes 4 seconds. The winning crew were R. Whitney, bow; G. F. Newton, Jr., 2; G. O. Metcalf, 3; L. Withington, 4; E. C. Bacon, 5; A. Strong, 6; J. E. Wald, 7; R. C. Cutler, stroke. The freshmen eight-oared event was the closest of the three races, Harvard's time being 11 minutes 54½ seconds and Yale's 12 minutes 2 seconds. In this race as well as in the 'varsity eight oars the winner's time was slower than Cornell's for the same event. The 'varsity four oars resulted in an easy victory for Harvard, whose time was 13 minutes ½ second.

Of the dual college regattas held during the year the one to attract the most interest was that between Cornell and Harvard. The race took place on the Charles River over a two-mile course, Cornell being the winner in 11 minutes 23 seconds. In other dual races Harvard defeated Annapolis at Annapolis over a two-mile course, the winner's time being 11 minutes 17 seconds; Annapolis defeated Columbia and Syracuse over the same course, the navy crew making its best time 10 minutes 42½ seconds against Columbia. The Cornell freshmen defeated the Harvard freshmen on the Charles River, covering the two miles in 11 minutes 10 seconds. Two college regattas were held in the West. Stanford University defeated the University of California at Oakland and the University of Wisconsin defeated the University of Washington on Lake Mendota, Wis.

The thirty-eighth annual regatta of the National Association of Amateur Oarsmen was held on the Potomac River August 12-13. The only new American record established was in the quarter-miles race in single sculls which was won by William Mehroff of the Nassau Boat Club of New York in 1 minute 24¾ seconds. The winners of other events were: International fours, Arundel Boat Club of Baltimore; intermediate fours, Argonaut Rowing Club of Toronto; junior eights, Detroit Boat Club; senior doubles, Frederick Fuessel and Frederick Shepherd of the Harlem Boat Club of New York; senior eight-oar shells, Ottawa Rowing Club.

The eighth annual regatta of the National Rowing Association, popularly known as the American Henley, took place on the Schuylkill River on May 21 over a course of 1 mile 550 yards long. The winners of the more important events and the time made in each follow: First four oared shells, University Barge Club of Philadelphia, 8 minutes 3½ seconds; junior collegiate eight-oared shells, Harvard, 7 minutes 9½ seconds; first single sculls, Fred Shepherd of the Harlem Boat Club of New York, 8 minutes 54½ seconds. In the forty-fourth annual regatta on the Harlem River the Wahnetah Boat Club won the senior eight-oared shells and the senior single sculls race went to Fred Shepherd of the Harlem Boat Club.

Magdalen College, Oxford, won the Grand Challenge Cup in the Henley Regatta, held at

Henley, England. The other winners at the Henley meeting were: Steward's Challenge Cup, Winnipeg Rowing Club of Toronto; Thames Challenge Cup, Anglian Boat Club; Senior Goblets, Leander Rowing Club; Visitors' Challenge Cup, Trinity Hall, Cambridge; and the Diamond Challenge Sculls, W. D. Kinnear of the Kensington Rowing Club.

The sixty-seventh annual Oxford-Cambridge boat race was won for the second year in succession by the Oxford crew, whose time for the four miles was 21 minutes 14 seconds. The record for the event made by Oxford in 1893 and equalled by Cambridge in 1900 is 18 minutes 47 seconds.

**ROYAL ACADEMY.** See PAINTING.

**RUBBER.** The high price of rubber maintained during the year 1910 led to a considerable curtailment in the output of the manufacturing industry in which tires now figure most prominently. The prices of all manufactured articles were advanced to correspond with the changed conditions in the crude rubber market. The price of the best grade of Pará rubber in New York was \$2.90 a pound in April, 1910, as compared with \$1.26 in April of the previous year at 84 cents in April, 1908. In London Ceylon rubber inferior to the South American sold for \$3.10. At the end the year a price of \$1.35 per pound, a substantial decline over that of the late spring and lower than at the end of 1909, when it was \$1.80, was reached and supplies of crude rubber were coming into the primary markets in full quantities so that the Brazil crop of about 40,000 tons for 1910-11 was anticipated which would be about the same output as in 1909-10. From the Far East a large increase was expected and the output was estimated at about 15,000 tons.

About 60 per cent. of the world's output now goes to the United States and of this about one-half is put into automobile tires. The increase in the consumption of rubber in the United States has been at a greater rate than the increase in population. The imports of crude india rubber, not including gutta-percha, jelutong, balata, or the like for the year 1910 and previous decades, as compared with the population have been as follows:

	1910	1900	1890
Population .....	91,972,266	75,994,575	62,947,714
Imports (pounds).....	101,078,825	49,397,138	33,712,089

The exports to foreign countries of India rubber manufactures have increased from \$1,236,443 to \$9,060,895 in twenty years.

Arrivals of crude rubber at Pará (including Pará) during the first half of four crop seasons, or from July 1, to December 30, have been as follows: 1910 (to December 17, 1910), 14,610 tons; 1909, 16,715 tons; 1908, 15,735 tons; 1907, 14,240.

**RUBIDIUM.** See ATOMIC WEIGHTS.

**RUCKER, DANIEL HENRY.** An American army officer, died January 6, 1910. He was born in Belleville, N. J., in 1812. In 1837 he was appointed second lieutenant of the First Dragoons and was promoted to be first lieutenant in 1844

and captain in 1847. He served in the Mexican War and throughout the Civil War rising to the rank of brevet major-general. He was honorably mustered out of the volunteer service in 1868. In 1882 he was appointed brigadier-general and quartermaster-general in the regular army. He retired at his own request, in 1882. He was the oldest surviving army officer at the time of his death.

**RUEBEL BRONZE.** See CHEMISTRY.

**RUEF, ABRAHAM.** See CALIFORNIA.

**RULES, HOUSE.** See UNITED STATES, Congress.

**RUM.** See LIQUORS, FERMENTED AND DISTILLED.

**RUMANIA.** A constitutional monarchy composed of the (formerly Turkish) Moldo-Wallachian provinces and the territory of the Dobruja. Capital, Bucharest.

**AREA AND POPULATION.** Area, 50,720 square miles. Population (1899), 5,956,990; estimated, 1905, 6,480,300; 1907, 6,684,265; 1908, 6,771,722. Births (1908), 272,850; deaths, 185,393; still-births, 6963; marriages, 61,499; divorces, 2384. Over 50 per cent. of the marriages show the women to be between the ages of sixteen and twenty. Bucharest has 300,000 inhabitants; Jassy, 80,000; Galatz, 66,000.

**EDUCATION.** The census of 1899 returned 78 per cent. of the population over seven years of age as unable to read or write. Since then considerable progress has been made. Primary education is compulsory. Official statistics for the year 1904-5 are as follows: State-supported schools, 4851, with 10,525 teachers and 559,934 pupils; private, 436, with 2261 teachers, 30,856 pupils. Secondary schools 72, with 1231 teachers, 16,787 pupils. In industrial and agricultural schools, 3729 students. University of Bucharest, 85 professors, 3443 students; University of Jassy, 63 professors, 629 students.

**AGRICULTURE, ETC.** Of the total area, 5,974,798 hectares were under cultivation in 1908 as follows: 5,133,459 under cereals; 36,228 under textile and oleaginous plants; 90,022 under legumes and tubers; 110,240 under grasses and forage crops; 428,474, natural pasture; 70,267, plum orchards; 86,337, vines; 19,771, industrial plants. The areas in hectares under different crops, and the production in hectolitres are given for two years as follows:

	1907	1908
Corn .....	1,928,592 ha. 20,289,516 hl.	2,020,315 ha.
Wheat .....	1,714,317 ha. 14,884,307 hl.	1,801,685 ha. 19,316,118 hl.
Rye .....	146,659 ha. 899,947 hl.	147,052 ha. 930,421 hl.
Barley .....	509,693 ha. 7,069,858 hl.	620,190 ha. 4,536,399 hl.
Oats .....	352,468 ha. 6,287,334 hl.	490,338 ha. 6,065,427 hl.
Millet .....	130,360 ha. 869,273 hl.	53,461 ha.
Rape .....	16,691 ha. 53,656 hl.	13,038 ha. 91,333 hl.
Vines .....	82,960 ha. 967,527 hl.*	86,337 ha.
Plums .....	71,503 ha. 661,104 qu.†	70,267 ha.

\* Value, 32,851,403 lei. † Value, 6,077,543 lei.

The livestock was valued in 1900 at 462,740,000 lei. Livestock raising has since then declined on account of the closing of the Austro-Hungarian frontier to exports of Rumanian cattle. Silk-worm culture was carried on in 1907 in 55,101 breeding establishments; weight of

fresh cocoons produced, 438,057 kilograms. State forests (1905), 1,069,702 hectares; revenue (1899-1905), 34,279,120 lei. Private forests, 1,492,841 hectares. Fishing has progressed under protection; catch (1907-8), 29,876,415 kilos.

The investigations in 1907 by the Ministry of the Interior into agricultural conditions (investigations instigated by the agrarian troubles of that year) have resulted in legislation looking to the amelioration of the condition of the peasantry.

The petroleum industry is next in importance to agriculture. Total output of crude oil in 1905, 641,070 metric tons, valued at 20,508,435 lei; 1906, 890,888 tons, 33,856,044 lei; 1907, 1,142,448 tons, 46,840,388 lei. Estimate for 1908, 1,147,727 tons; for 1909, 1,296,403 tons. Output of coal mines (1906-7), 128,413,215 metric tons; 1905-6, 144,323,015. Salt (a government monopoly) mined in 1906-7, 124,399,514 kilos; in 1905-6, 115,680,644. Flour mills (1907-8), 144.

COMMERCE. Total imports and exports for three successive years are given in lei as follows:

	1906	1907	1908
Imports .....	422,114,125	430,590,115	414,058,479
Exports .....	491,360,178	554,018,631	379,430,871

Imports for home consumption and exports of domestic products are detailed for 1908 in the following table:

Imports	1908 Lei	Exports	1908 Lei
Metals, etc. ....	100,197,161	Cereals, etc. ....	282,446,298
Textiles, etc. ....	74,421,205	Petroleum, etc. ....	38,593,595
Wool, hair, etc. ....	37,833,395	Wood, etc. ....	26,478,038
Machinery ....	37,561,084	Vegetables ....	11,750,491
Clothing ....	21,156,435	Animal prods. ....	6,920,437
Hides, etc. ....	16,533,908	Live animals. ....	2,632,863
Silks, etc. ....	12,537,981	Fruits .....	1,333,985

Germany contributed imports amounting to 140,810,359 lei, and received exports valued at 24,566,838; Austria-Hungary, 94,967,719 and 25,989,703; Great Britain, 66,770,416 and 40,379,521; France, 23,288,168 and 27,789,383; Italy, 21,540,120 and 34,378,705; Belgium, 12,921,976 and 105,770,889. Vessels entered (1909), 30,649, of 9,128,030 tons; cleared, 30,572, of 9,123,388.

COMMUNICATIONS. Length of railways (1909), 2054 miles (State, 1980); receipts for the year 1907-8, 83,358,576 lei; expenditure, 49,676,098; total expenditure to 1905, 773,315,048. The European Commission of the Danube, having its headquarters at Galatz, has an average annual revenue of £80,000 derived exclusively from taxes on shipping. Length of telegraph lines (1907-8), 4756 miles; wires, 13,190; number of offices, 3047. Telephone lines, 19,322 miles; wires, 29,845. Post-offices, 3280.

FINANCE. The monetary unit is the leu, valued at 19.3 cents. The revenue and expenditure (including railway and other budgets) for three successive years are given in lei below:

	1908-9	1909-10	1910-11*
Revenue .....	411,011,035	435,685,322	461,079,942
Expenditure .....	408,741,268	428,648,945	461,079,942

\* Estimate.

The principal sources of revenue and items of expenditure are estimated for 1910-11 as follows (in thousands of lei):

	1000 lei.	Expenditure	1000 lei.
Revenue	1000 lei.	Finance .....	197,628
Public services ..	112,639	Public works ....	81,664
Indirect taxes ...	73,330	War .....	61,175
State monopolies. .	67,460	Interior .....	46,388
Finance .....	66,254	Ed. & Worship ..	44,074
Direct taxes .....	43,880	Justice .....	10,534
State domains ...	27,044	Agriculture, etc..	7,432
Stamps, etc. ....	26,000		

Public debt, April 1, 1910, 1,553,152,527 lei. Capital and reserves of the National Bank of Rumania, December 24, 1909, 39,055,000 lei.

ARMY. Military service is compulsory between the ages of 21 and 42. Seven years are spent in the active army, 10 in the reserve and 4 with the militia. In the active army the men in the infantry serve two years with the colors and five on leave; for the other arms three years are spent with the colors. Considerable modification in the organization of the army was effected by the budget of 1910-11. The post of inspector-general of the army was created to be filled by H. R. H. Prince Ferdinand, who retained at the same time his duties as inspector-general of cavalry. A new army corps, the Fifth, was organized to be situated at Constanza and to consist largely of reserve battalions, but with full cadres and staffs. By the new reorganization all the chasseur and infantry battalions were to have four companies, one of which would be a company cadre. There were 36 infantry regiments, each of three battalions and a dépôt company; nine battalions of chasseurs of four companies plus a dépôt company and two reserve battalions were being created for the 35th and 36th regiments. The cavalry regiments were organized into four squadrons and one dépôt squadron, with the exception of the Escort Regiment, which had but three squadrons and one dépôt squadron. There were 10 Roshiori cavalry regiments grouped by twos to form brigades and 10 Calarashi regiments. There were 18 regiments of artillery grouped into 9 brigades and three groups of reserve artillery to serve as the nucleus for the reserve divisions of artillery. In all there were 72 field batteries, 18 battery cadres, 7 howitzer batteries, and 9 reserve batteries, making a total of 106 batteries with 18 dépôt batteries. There was also one group of horse artillery of 4 batteries, designated to form the artillery for the cavalry division. There were five battalions of engineers and one of fortress pioneers each of three companies and a dépôt unit, and various other technical troops such as railway, wireless, automobile, etc., divisions. The budget for 1910-11 provided for an increased number of troops to be called out amounting to 96,000 men in all, 53,000 of which were to serve for 10 days during the manœuvres and 43,000 for 22 days' training in camps of instruction. In 1910 the effective strength on a peace basis was given at 3942 officers, 658 civil employees, 982 military cadets, 81,540 men, 17,978 horses and 452 cannon. The war effective was 7600 officers, 280,000 men, 86,000 horses, and 644 cannon.

NAVY. One protected cruiser of 1320 tons, a training-ship of 350, 7 gunboats, 6 coast-guard vessels, a screw despatch boat (240 tons), 6 first- and 2 second-class torpedo-boats, comprise the navy; in addition are 12 naval police boats, with 8 vedettes. Personnel, 143 officers, 2176 men. Two new armored cruisers are projected.

GOVERNMENT. The executive authority devolves upon the King, aided by a cabinet (8

members) and a prime minister. A Senate (120 members) and a Chamber of Deputies (183 members) constitute the legislative body. The present King, Charles I., was born April 20, 1839 (o. s.); married (1869) to Elizabeth, Princess von Wied (Carmen-Sylva); crowned, May 22, 1881. Heir-presumptive, Prince Ferdinand von Hohenzollern (nephew of Charles I.), born August 24, 1865. The Council of Ministers is composed as follows: Premier and Minister of the Interior, J. J. C. Bratiano; Instruction and Worship, Sp. Haret; Foreign Affairs, Al. G. Djuvara; Finance, E. Costinesco; Justice, T. Stelian; Public Works, B. G. Mortzun; Agriculture and Domains, Al. Constantinesco; Industry and Commerce, M. G. Orleano; War, Gr. Crainciano.

Some comment was occasioned by the report in the autumn of 1910 that an understanding had been reached with Turkey, whereby Rumania engaged in the event of war between Turkey and Bulgaria to mobilize her troops on the Bulgarian border. See *TURKEY, History*.

**RUSSIA.** An empire of northeastern Europe and northern Asia, extending from the Baltic to the Bering seas, and from central Europe and Asia to the Arctic Ocean. Capital, St. Petersburg.

**AREA AND POPULATION.** The area and the population in 1907 and 1908, according to the Russian Central Statistical Committee, are seen below:

	Sq. miles	1907	1908
European Russia...	1,862,524	111,279,500	113,841,000
Poland .....	49,018	11,138,700	11,360,900
Ciscaucasia .....	85,201	4,454,800	4,601,200
Trans.-Caucasia ..	95,402	6,199,100	6,307,200
Siberia .....	4,786,730	6,893,900	7,049,200
Steppes .....	710,905	2,856,100	2,927,900
Turkestan .....	400,770	5,856,400	5,961,600
Trans.-Caspian Province .....	213,855	405,500	415,700
Finland .....	125,784	2,925,300	2,968,600
Internal waters...	317,486	.....	.....
<b>Total .....</b>	<b>8,647,667</b>	<b>152,009,300</b>	<b>155,433,300</b>

Total population in 1897 (last census), 129,209,297 (Aryans, 100,331,516; Uralo-Altayans, 17,669,067; Jews, 5,070,205; Georgians, 1,352,535; other Caucasians, 1,091,782; Chinese, Japanese, Koreans, 86,113; Hyperboreans, 33,602; others, 5201). All following statistics, except when specifically indicated, are exclusive of Finland. For Finnish statistics, see *FINLAND*. Births (1904, the latest obtainable government figures) in all European Russia, exclusive of Finland, 5,539,174; deaths, 3,406,452; in Asiatic Russia, 874,311 and 542,775. Emigration in 1906, 139,050; 1905, 218,371; 1904, 128,211. No figures are obtainable in Russia for the number of Russians emigrating to the United States; but the United States Bureau of Immigration records 120,460 as the

number of persons whose last permanent residence was Russia entering this country during the fiscal year ended June 30, 1909 (Finns, 11,202; Jews, 39,150; Lithuanians, 14,595; Poles, 37,770; Russians, 9099; Germans, 7781; others, 863).

The population of the chief towns is given as follows: European Russia: St. Petersburg, 1,678,000; Moscow, 1,359,254; Warsaw, 756,426; Odessa, 449,873; Lodz, 351,570; Kiev, 319,000; Riga, 282,230; Kharkov, 173,989; Helsingfors (Finland), 117,317. Asiatic Russia: Baku, 179,133; Tiflis, 159,590; Tashkent, 155,673; Irkutsk, 70,000; Tomsk, 67,419.

**INTERNAL MIGRATION.** The opening up of Siberia by the Trans-Siberian Railway has led many thousands of Russian peasants to seek in that country some amelioration of the wretched conditions under which they exist at home. Up to 1906, only 60,000 persons altogether had settled in the new land. Since 1906, the average annual exodus has increased steadily. The permanent new settlers in 1907 are given at 415,287; in 1908, 637,608. During 1909, 619,000 emigrants left European Russia by the Siberian Railway. Total emigration from 1896 to 1907, 1,560,905.

**EDUCATION AND RELIGION.** Public elementary instruction is inadequately provided for, and 72 per cent. of the population above the age of nine are illiterate. The average per 1000 attending any school is 46.1. In the autumn of 1909 the rule concerning the admission of Jews to the universities was rigidly enforced. This rule fixes, on the basis of their proportion to the total population, the number of Jewish candidates for admission at 3 per cent. An official report gives the number of all kinds of public schools (1907) in the empire at 107,141, with a total attendance of 6,076,616 (primary, 5,505,454; middle, 329,739; high, 41,729; special, 199,694). The cities of St. Petersburg and Kronstadt, and the governments of Warsaw and Tiflis, are not comprehended in these figures. Private schools in the same year had 363,777 pupils; unclassified schools had 229,852. Elementary schools in 1906, 92,501; teachers, 170,894; pupils, 5,738,289. Universities (1908-9): Moscow, 9516 students; St. Petersburg, 8235; Kiev, 3000; Kharkov, 4537; Yuriev or Dorpat, 2918; Warsaw, 809; Kazan, 2902; Odessa, 3423; Tomsk, 780. A new university was created in 1909 at Saratov and another at Moscow (the Popular University) in 1908.

The emperor is head of the church (the Græco-Russian); he appoints to all offices, and transfers and dismissals are at his discretion. The Procurator of the Holy Synod has practically unlimited authority under the emperor. The religious liberty that was a prominent feature of the Manifestos of 1905 received a severe blow when the government bill was proposed in 1909 severely restricting Catholic observances. It was aimed at the Ruthenians in Poland who, forcibly converted to Russian Orthodoxy in 1875-6, had taken advantage of the Manifestos of 1905 to lapse into Roman Catholicism.

**AGRICULTURE.** The state and imperial family, towns, etc., own in European Russia 36.0 and in Poland 7.4 per cent. of the land; private owners, 23.7 and 46.6; the peasants, 32.3 and 41.6; unfit for culture, 8.0 and 4.4. The land owned by the peasants was forcibly sold to them after the liberation, at a price which they had no voice in fixing, and by a system of pay-

ments which becomes each year a more and more insupportable burden. Of the productive land 401,435,000 acres in European Russia (1905), 17,739,000 in Poland (1899) were arable; 191,473,000 and 6,059,000 under orchards, meadows, and pasture; 474,000,000 and 6,700,000 under forest, etc. Official figures (Central Statistical Committee) give the area sown to principal crops and the production for two years, for the empire:

	1909	1910
	1000 a.	1000 bu.* 1000 a. 1000 bu.*
Rye .....	71,970	896,835 71,020 1,182,214
Wheat .....	65,274	783,271 71,034 682,200
Barley .....	26,851	473,617 28,440 431,250
Oats .....	46,240	1,145,373 47,331 903,374
Corn .....	3,808	50,764a 3,660 61,112b
Flax .....	3,601	23,197†

\* 60-pound bushels of wheat, 56 of rye, 48 of barley, and 32 of oats.

† Seed. Fibre, 1,186,984,401 lbs.

a 1907. b 1908.

Area under beetroot (1908-9), 1,340,743 acres. Hemp (1907), 1,880,600 acres; seed, 25,524,700 poods; fibre, 30,450,200. Potatoes (1907), 10,305,000 acres; 1,747,705,300 poods; (1908) 1,798,902,000 poods. Tobacco (1908), 170,145 acres; 92,834 tons. Hay (1907), 87,127,000 acres; 2,026,223,600 poods; (1908) 2,958,625,600 poods. Cotton (1909), approximately, 11,000,000 poods. Livestock (1908): 29,285,000 horses; 43,204,000 cattle; 61,549,000 sheep and goats; 12,734,000 swine. A serious epidemic is reported among the cattle in Yaroslav and neighboring provinces; no reliable details are obtainable.

The profit derived from the state forests after all expenses were deducted amounted (1907) to 47,489,000 roubles.

**MINING AND METALS.** The development of the mining and metallic industries is shown in the following comparative table of production:

	1905	1906	1907
Gold, kilos .....	28,037	23,911	31,113
Platinum, kilos .....	5,158	5,685	5,301
Silver, kilos, .....	1,998	1,564	2,141
Lead, tons, .....	631	997	512
Zinc, tons, .....	7,786	9,928	9,955
Copper, tons, .....	8,278	9,162	13,037
Pig-iron, 1000 tons, .....	2,669	2,648	2,773
Iron and steel, 1000 tons, .....	2,291	2,231	2,364
Coal, 1000 tons, .....	18,447	21,459	24,537
Naphtha, 1000 tons, .....	6,610	7,229	7,675
Salt, 1000 tons, .....	1,813	1,703	1,836

Production in 1908 of pig-iron, 171,060,000 poods (1000 poods = 16.121,789 tons); of iron and steel, 145,375,000 poods; of Baku petroleum, 467,100,000 poods.

**MANUFACTURES.** Total number of manufacturing under state supervision in 1909, 14,710, employing 1,831,396 persons. Number of distilleries (1908-9), 2625; output of alcohol, 122,929,000 gallons (2610, with 115,106,000 in 1907-8). Sugar works (1908-9), 274; no statistics for production (278 in 1907-8; production, 76,046,000 poods). The Department of Finance has fixed the amount of total production of beet-sugar manufacturing for 1910 at 77,890,453 poods, plus 500,000 poods for export to Persia. The timber industry employs 80,000 hands (factories, mills, etc., 1428), and the value of the annual output approximates 155,000,000 roubles. Flax, hemp, and jute factories, 414; employees, 52,000; annual production (about), 73,000,000 roubles. Cotton spinning and weaving mills, 140; employees, 399,900; spinning spindles, 8,132,338; twist spindles, 322,145;

looms, 139,964; value of annual production (about), 607,000,000 roubles.

**COMMERCE.** The total trade of the empire is given, in roubles, for three successive years (1909 provisional):

	1907	1908	1909
Imps.: mdse. ....	847,365,000	912,659,000	788,448,000
Gold, silver .....	10,937,000	28,226,000	.....
Exps.: mdse. ....	1,053,010,000	998,250,000	1,366,373,000
Gold, silver .....	13,108,000	18,910,000	.....

Imports and exports by great classes for three years across the European frontier, the Black Sea frontier of the Caucasus, and to and from Finland (in thousands of roubles):

	1907	1908	1909
Foodstuffs .....	119,087	123,375	116,810
Raw materials.....	375,909	406,780	411,137
Animals .....	1,073	1,409	1,553
Mfd. goods.....	205,444	215,743	258,948
Total imports....	701,513	747,307	788,448

	1907	1908	1909
Foodstuffs .....	559,962	517,944	900,326
Raw materials.....	383,613	370,719	416,276
Animals .....	22,745	23,386	25,044
Mfd. goods.....	25,205	26,720	24,727
Total exports....	991,525	938,769	1,366,373

The bulk of Russian trade is carried on through the European frontier, the Black Sea frontier of the Caucasus, and with Finland; at these three frontiers 90 per cent. of the customs duties was levied in 1907. The details of the trade of the empire (not including the external trade of Finland) are given below for three years in thousands of roubles:

	1905	1906	1907
Imports:			
Across European and Black Sea frontiers.	536,900	589,900	671,200
From Finland.....	28,200	35,400	31,600
Across Asiatic frontier .....	70,000	175,400	144,600

Other products....	57,900	51,000	76,000	71,300
Total .....	399,600	375,600	760,700	748,300

Additional exports, across the Asiatic frontier: Sugar, in 1907, 12,198,000 roubles; in 1908, 12,870,000; in 1909, 12,328,000. Cottons, in 1907, 19,635,000 roubles; in 1908, 18,761,000; in 1909, 21,519,000. Additional imports, across the Asiatic frontier: Rice (from Persia), in 1907, 4,995,000 roubles; in 1908, 7,073,000; in 1909, 7,025,000. Raw cotton, in 1907, 8,507,000 roubles; in 1908, 7,503,000; in 1909, 9,534,000.

The most important countries of origin and destination are seen below (valuation in thousands of roubles, 1909 figures provisional):

	Imports		Exports	
	1908	1909	1908	1909
Germany .....	348,426	356,822	278,992	386,629
Great Britain.....	120,286	128,017	220,514	288,597
United States....	79,215	57,917	2,822	11,496

Total .....	11,011	10,760	10,926	10,645
Coasting (1907)* .....	68,514	28,844		

\* Touching at ports of the White, Baltic, Black, Azov, and Caspian seas, the Danube, and the Pacific Coast.

The mercantile marine consisted, January 1, 1909, of 3363 vessels, of 700,959 tons (898, of 443,243 tons, steam; remainder sail).

COMMUNICATIONS. Length of railways open for traffic January 1, 1909, 44,595 miles (34,108 in European Russia, 10,487 in Asiatic Russia. Government lines, 32,675 miles; company lines, 10,472 miles; short local lines, 1448. Gross receipts (1907): European Russia, 710,783,000 roubles; Asiatic Russia, 78,623,000. Cost of construction to 1906: European Russia, 6,137,624,000 roubles; Asiatic Russia, 437,235,000.

Of the 77,721 miles of rivers, canals, and lakes in European Russia, 16,080 are navigable for steamers, 8598 for small sailing craft, 28,-

516 for rafts; of the 73,848 miles in Asiatic Russia, 21,544 are navigable for steamers, 8280 for small sailing craft, 25,065 for rafts. Total vessels forming the European Russian river fleet in 1908, 26,676. The Caspian Sea naphtha flotilla has 57 steamers and 263 sailing vessels.

Length of telegraph lines reported in 1908, 119,188 miles; of wires, 416,252; stations, 113,583; receipts (1907), 77,092,269 roubles; expenditure, 46,520,211. Post-offices, 14,311.

FINANCE. The revenue and expenditure, ordinary and extraordinary, for three years are given, in thousands of roubles, as follows (1909 estimate):

	1907	1908	1909
Revenue ordinary....	2,342,475	2,417,808	2,458,741
Revenue extraord....	143,043	200,860	136,308
Expenditure ordinary..	2,195,968	2,387,751	2,449,535
Expenditure extraord.	386,640	268,932	145,514

The budget estimates for 1910, voted by the Duma and the Council of the Empire and sanctioned by the emperor April 13 (26), 1910, balanced at 2,591,687,880 roubles. The principal estimated sources of revenue and items of expenditure in 1910 are reported in thousands of roubles as follows:

Rev.	1000 rs.	Expend.	1000 rs.
Direct taxes ..	198,246	Holy Synod....	34,195

Total .....	2,591,687		

The budget for 1911 was reported as balancing at 2,893,351,300 roubles. The total debt stood January 1, 1910, at 9,038,756,433 roubles. The Bank of Russia (a state and also a commercial bank) had January 8 (21), 1910: Assets, 2,694,066,000 roubles; liabilities, 2,467,358,000. The savings banks (1908) numbered 6710, with 6,210,238 depositors and deposits amounting to 1,149,243,582 roubles.

ARMY. In 1910, as a result of legislation by the Duma on December 29, 1909, appropriating an addition to the military budget of some \$50,000,000, there were numerous reforms in progress and a general reorganization. In October, 1910, it was announced that there had been formed three new army corps for the European army, one for the army in the Caucasus, and one for the army in Siberia. The army was increased by the creation of 174 new battalions

of infantry, making five additional divisions in Europe and a brigade of tirailleurs, 2 divisions of infantry in the Caucasus and 2 divisions of tirailleurs in Siberia. All the isolated bodies of tirailleurs were transformed or grouped into regiments of two battalions. The general tendency of the reorganization was to suppress the reserve organizations and increase the number of active units. The actual strength of the army was not increased for many of the reserve and fortress organizations were disbanded.

The various armies into which the Russian forces are divided vary considerably in their recruitment and organization. The European army follows in the main European models, but in the armies of the Caucasus, Turkestan, and Amur local conditions influence the organization and training. In the army in Europe and the Caucasus, including the Guards Corps, there are 32 army corps, and in addition 2 cavalry corps, 2 corps in Turkestan and 3 in Siberia.

The peace strength of the empire has been estimated as follows:

	Europe & Caucasus	Asiatic Russia
Infantry .....	627,000 men	83,000 men
Cavalry .....	116,000	14,000
Artillery .....	138,000	15,000
Engineers .....	34,000	8,000
Army services .....	34,000	8,000
Total .....	949,000	124,000

By including Cossacks and frontier guards this peace strength has been increased to 1,424,000 by some authorities, who add 60,000 men in Turkestan and Semirietshenk and 280,000 in Siberia.

The war strength of the Russian army is estimated at about 56,500 officers and 2,853,000 men, but all of this force which is the active army, of course, is not available in any one part of the empire. There is also a reserve estimated at 1,064,000 men, frontier battalion; and Cossacks, 142,000, while the Territorial Reserve of some 2,000,000, and Opoltschenié of 1,300,000 bring the available war strength of trained men to about 5,000,000, but it was an open question whether more than two-thirds of this number could be put into the field and in any event the mobilization would be slow.

The accompanying table shows the changes and increases following on the reorganization of the troops of the active army as regards the various districts:

District	Div. of Infantry	Div. of Cavalry	Div. of Infantry	Div. of Cavalry
Saint Petersburg ....	7½	2	9	2
Vilna .....	10½	2½	8½	2½
Varovie .....	12	9	10	7½
Kiev .....	10½	5	10½	5
Odessa .....	4½	1	4½	1
Moscow .....	7	1½	10	2
Kasan .....	.....	.....	5	1
Caucasus .....	5	3	7	4
Turkestan .....	3	2	3	2
Omsk .....	.....	.....	1	.....
Irkutsk .....	4	½	4	½
Amur .....	5	½	6	½

The Russian army was engaged in forming new artillery and engineer organizations, together with various technical corps, such as aeronautical and motor divisions. During the year there were regulations adopted for the uniforms of officers in which provision was made

for service uniforms very similar to those employed by other European nations.

**NAVY.** The number and displacement of war ships of 1000 tons and over, and of torpedo craft of 50 tons and over, built and building, in 1910, are placed at 211, of 401,463 aggregate tons, detailed as follows: 13 battleships (10,000 tons and over), of 213,200 aggregate tons; 2 coast-defense vessels (10,380); 7 armored cruisers (70,200); 7 cruisers over 6000 tons (46,460); 2 cruisers 6000 to 3000 tons (6300); 2 cruisers 3000 to 1000 tons (2680); 100 torpedo-boat destroyers (38,804); 45 torpedo boats (5697); 33 submarines (7742). The larger vessels of the effective navy in 1910 were:

Battleships, 8 (5 first-class), detailed as follows: 2 of 12,733 each, the *Erstaf* and the *Ioann Zlatoust*, completed in 1910; one of 13,516; one of 13,110; one of 12,480; one of 8880; one (1896) of 13,318; one (1896) of 10,280. Armored cruisers, 6 (all first-class): 3 of 7900 tons each, the *Pallada* and the *Bayan* completed in 1909, the *Makharoff* in 1908; one of 15,000 tons; one of 12,336; one of 12,130. There were building, in 1910, six first-class battleships, four of 23,000 and two of 17,400 tons each.

Naval appropriation in 1910, \$47,256,569; in 1909, \$58,480,012; in 1908, \$49,682,482; in 1900, \$42,101,212.

Of the four *Dreadnoughts* laid down in June, 1909, none has yet been launched; financial and administrative obstacles have come up continually to impede progress, and a special commission was appointed in August, 1910, to investigate naval abuses. The reorganization of the training scheme for officers was set in motion early in the year. Several million roubles have been appropriated for the works at Helsingfors and Sveaborg, the new headquarters for the Baltic Fleet.

**GOVERNMENT.** Russia is actually an autocracy, the entire legislative, executive, and judicial power being vested in an emperor whose will is supreme. Nominally the government is a constitutional hereditary monarchy, with an elective Duma (since 1905) and many legal provisions for public liberty and freedom of conscience, speech, assembly, and association. The members of the Duma are elected for five years and represent the governments, provinces, and seven largest cities. The Council of the Empire has equal legislative powers with the Duma. Special administrative boards exercise executive functions. The present Emperor of all the Russias, Nicholas II, was born May 6 (18), 1868; came to the throne October 20 (November 1), 1894; married November 14 (26), 1894, Princess Alexandra Alix of Hesse. Heir-apparent (Czarevitch), Grand-Duke Alexis, born July 30 (August 12), 1904. The heads of departments in 1910 were as follows: Premier and Minister of the Interior, P. A. Stolypine; Minister of the Imperial Household, Gen. V. B. (Baron) Fredericksz; Foreign Affairs, S. Sazonoff; War, Gen. W. A. Sukhomlinoff; Marine, Vice-Admiral E. A. Voyevodsky; Justice, J. G. Stecheglovitoff; Finance, W. N. Kokovtsoff; Commerce and Industry, M. T. W. Timacheff; Communications, S. V. Rukhloff; Procurator-General of the Holy Synod, S. M. Lukianoff; Agriculture, A. W. Krivocheyn; State Comptroller, P. A. Kharitonoff; Instruction, Dr. L. A. Casso. President of the Council of the Empire, M. G. Akimoff. President of the Duma, A. J. Gutchkoff.

## HISTORY

**THE DUMA.** The meetings of the Duma were marked by some disorder early in the year on account of the aggressive tactics of the Reactionaries and in March M. Homiakoff resigned the presidency. M. Gutchkoff the Octobrist leader was elected in his place. The appropriation to the department in charge of Siberian exile was cut down by the budget committee in March. The bill of the Opposition for the abolition of the death penalty was reported on adversely. The new president, M. Gutchkoff, declared that the chief need of the country was for national defense, and that a measure would be introduced for that purpose calling for an expenditure within the next ten years of \$650,000,000. Important measures passed were the Agrarian bill, the bill for the reform of the local courts, the bill for the establishment of zemstvos in the southwestern provinces and the Finnish bill (see below). The Duma adjourned at the end of June. M. Gutchkoff resigned the presidency to serve a term of imprisonment for having fought a duel, but after a detention of five days in August was released by order of the Czar. The Duma reassembled on October 28 and re-elected M. Gutchkoff as president. During the interval a special commission was appointed to investigate alleged abuses in the Admiralty, the Duma having made such investigation a condition of further grants for naval construction. Some of the chief measures passed by the Duma were held up by the Imperial Council. The latter withdrew the liberties provisionally accorded to the Old Believers by the Duma bill. The organization of the representatives of the gentry into a party under the title of Nationalists tended to strengthen the position of Premier Stolypin in the Duma. The expenditure of \$55,000,000 was authorized by the Duma for the reorganization of the army late in December, 1910. The Duma had not yet succeeded in attacking successfully the system of court-martial, although it had devoted its sessions to debates on the plan for a habeas corpus measure and trial by jury. The court-martial system, known as "re-enforced protection" had been for nearly four years enforced in most of the Russian cities. In regard to the question of nationality, Premier Stolypin laid down the principle that in regions where Russians happened to be in the minority, they should not be allowed to sink into political inferiority. Thus local administrations of the non-Russian parts of the empire, as, for example, Finland, Poland and the Baltic Provinces, must be approved by the Russians living there.

**THE LEGISLATIVE ACT FOR FINLAND.** The Finnish bill (see *FINLAND, History*) gave the Russian Duma authority to determine Finland's share in the Imperial expenses and to impose taxes, thus violating the constitutional right claimed by the Finnish people to tax themselves. The Duma also was to settle the rights of Russian subjects in Finland and might make exceptions to the Finnish criminal law and procedure. It could also legislate on popular education and the right of meetings and associations, on the importation of foreign literature, on the customs relations between Russia and Finland, on trademarks, copyrights and the monetary system, means of communication, navigation and the rights of aliens in Finland. The assumption of this great field of legislation

by the Russian Parliament was resented by the Finns as a complete subversion of their rights as a constitutionally governed country, and the Finnish Diet unanimously declared against it. On June 7 the Duma decided on the third reading of the bill by a vote of 196 to 105. M. Stolypin had declared the matter to be not one of controversy, but of historical fact. Finland had persistently refused to fulfil her military obligations. The bill only asserted the principle which Alexander I had applied, he said, and it had been repeatedly shown that Finland was subordinate in imperial matters by the acts of every emperor in the 19th century. The critical portions of the bill, namely, those providing that Finnish autonomy should be subject to the Imperial legislature as well as the provisions concerning schools, the press, right of meetings, of associations, taxation, military service, customs and the merchant marine were carried through with great rapidity, the Nationalists having secured the passage of a rule cutting off the debate on these clauses. The entire Opposition, along with some 20 Octobrists, immediately withdrew from the Chamber. The bill passed its third reading on June 10, and was accepted by the Council of the Empire on June 27. While the bill was under discussion remonstrances were received from members of the French, British, German, Italian, and Dutch parliaments. The French memorial of remonstrance was signed by 292 Deputies and 20 Senators and consisted in a historical survey of Finland's relations to Russia and of an appeal to the Imperial Duma "to bestow upon this problem the study that it deserves." It begins with a declaration that the signers "have followed with painful interest the recent development of the projects hostile to the independence" of Finland and feel "justified in drawing the attention of the Imperial Duma to the impression which persistence in such a policy must produce in France." The historical view of Russo-Finnish relations was precisely the opposite of that taken by the Czar, the Duma and the Council of the Empire, and the address amounted to a rather severe lecture on the policy which the Russian government had adopted.

**FOREIGN RELATIONS.** Relations with Austria-Hungary which had been strained since the Balkan crisis of 1908 were restored to a friendly footing in March. (See *AUSTRIA-HUNGARY, History*.) For an account of the Russo-Japanese Convention guaranteeing the *status quo* in Manchuria, see *JAPAN, History*, and for Russia's relation to the railway questions in the Far East, see *CHINA, JAPAN, and UNITED STATES, under History*. Concerning the difficulties occasioned by the retention of Russian troops in Persia, see *PERSIA, History*. The Czar's visit to the German emperor at Potsdam at the beginning of November occasioned much comment in the press, but it was declared to offer no menace to the stability of the Triple Entente, but on the contrary to assume its absolute maintenance; and that it had to do with the relations of Russia and Germany on the one hand and Persia and Turkey on the other. It was announced that the German government denied having taken any part in changing the attitude of Turkey toward Russia and that it acknowledged Russia's rights in northern Persia, but had expressed a desire that Russian railways projected in that region might be connected with the Bagdad railway. In the European press, it was regarded as a sign

that the Entente was drawing to an end. A meeting between the Czar and the King and Queen of the Bulgarians took place at St. Petersburg in March, at the end of which a note was issued declaring that the ministries of both governments were in accord in their desire to maintain peace in the Balkans. The King of Servia visited St. Petersburg soon afterwards.

**OTHER EVENTS.** Baron Ungern-Steinberg, the correspondent of an Austrian news agency, was arrested by the political police on June 25 and charged with having obtained possession of a secret document and shown it to some one in the Austrian service. In November he was found guilty of betraying military secrets and sentenced to hard labor for four years. The Asiatic cholera broke out in the Southwestern Province in June and by the first of July it had spread to St. Petersburg. At the end of July over 65,000 cases were reported in the provinces with a mortality at some points of nearly 50 per cent. and over 1000 cases were reported in St. Petersburg. Later, however, the numbers declined. Statistics published during the year showed that down to midsummer the deaths from cholera numbered 57,000 as against 28,000 in 1909. (See CHOLERA.) M. Nicholas Tchaikovsky and Madame Breschkovskaya who had been arrested in 1907 on the charge of belonging to a secret revolutionary society, but who on October 28, 1908, had been released on bail furnished by friends in England and the United States, were brought to trial in March. M. Tchaikovsky was acquitted, but Madame Breschkovskaya, who was seventy-eight years of age, was sentenced to Siberian exile. The Czar and his family spent two and half months in Germany in the autumn.

**RUSSIAN POLAR EXPEDITION.** See POLAR RESEARCH.

**RUSO-JAPANESE AGREEMENT.** See JAPAN, *History*.

**RUST-PROOFING PROCESS.** See CHEMISTRY.

**RUTGERS COLLEGE.** An institution of higher learning at New Brunswick, N. J., founded in 1766. There were enrolled in the year 1910 11,350 students in the courses leading to a degree, and about 100 registered on December 1, in the short course in agriculture. The faculty includes 42 members and the entire teaching staff is 52. Among the changes in the teaching staff during the year was the appointment of Walter Taylor Marvin, Ph. D., as professor of mental philosophy and logic; the appointment of Lieut. Arthur H. Ahrends, 29th Infantry, United States Army, professor of military science and tactics, and the appointment of Henry Briggs North, Ph. D., as associate professor of chemistry. John Hubbard Logan was appointed acting professor of history. During the year a chemistry building was in course of erection at a cost of \$65,000. It was ready for occupancy February 1, 1911. The productive funds held by the college amounted to about \$800,000 and the income was about \$150,000. The President is W. H. S. Demarest, D. D.

**RUTHENIUM.** See ATOMIC WEIGHTS.

**RYE.** The world's crop in 1910 was a little above the average but not quite as large as in 1909. The total production of the rye-exporting countries was larger and that of the rye-importing countries smaller than the year before. The world's rye crop in 1910 amounted to about 1,-

610,000,000 bushels, as compared with 1,736,683,000 bushels in 1909. See following table:

**THE WORLD'S RYE PRODUCTION IN 1909 AND 1910**

Countries	1909 Bushels	1910 Bushels
United States .....	32,265,025	33,065,600
Canada .....	1,715,380	1,544,755
Germany .....	447,127,550	414,139,700
Austria .....	114,526,060	109,027,550
Bulgaria .....	6,912,160	11,733,320
Denmark .....	19,053,940	18,907,075
Spain .....	34,929,535	27,618,655
France .....	55,734,845	47,987,150
Hungary (incl. Croatia and Slavonia) .....	50,857,345	59,420,720
Italy .....	5,036,500	5,443,110
Luxemburg .....	656,980	636,705
Norway .....	1,011,070	1,063,015
Netherlands .....	17,622,370	14,828,800
Rumania .....	3,091,340	7,683,300
Russia .....	897,580,855	869,359,800
Sweden .....	24,970,600	24,571,000
Switzerland .....	1,997,580	1,970,000
Algeria .....	22,470	62,500

The above figures are final for Germany, Spain, Hungary, Italy, Canada and the United States, and preliminary for all other countries. They are taken from the Bulletin of Agricultural Statistics for January, 1911, as published by the International Institute of Agriculture, Rome.

In the United States in 1910 rye gave a normal crop. This was largely due to the fact that the crop ripens earlier, the plant is hardier than the other common cereals and therefore the drouth conditions of the season could not exert such an unfavorable influence as they did upon other crops, particularly wheat and barley. Furthermore the most important rye-growing States are not in the section of the country where drouths were most prevalent and severe. The area devoted to rye in the United States this year was 2,023,000 acres and the average yield was 16.3 bushels per acre. The farm price per bushel on December 1 was 72.2 cents and on this basis the total yield represents a value of \$23,840,000. The leading rye-growing States and their yields were as follows: Pennsylvania 6,460,000 bushels, Michigan 5,355,000 bushels, Wisconsin 4,880,000 bushels, New York 3,111,000 bushels, Minnesota 1,955,000 bushels, New Jersey 1,530,000 bushels, Illinois 1,218,000 bushels and Nebraska 1,200,000 bushels. In all other States the crop amounted to less than a million bushels. The exports of rye from the United States in 1910 amounted to about 220,000 bushels, as compared with 1,272,500 bushels in 1909.

**SAGE FOUNDATION.** A foundation for social and economic investigation, founded in 1907 by Mrs. Russel Sage, who set apart in that year the sum of \$10,000,000 for its professional endowment. The object of the foundation is "the improvement of social and living conditions in the United States." The means by which this result is to be accomplished is not limited. The administration of the foundation is in the hands of eight trustees who are responsible for the expenditure of the income of the endowment fund and who are permitted to invest any part of that fund in plans for social betterment. The work carried on by the foundation in 1910 has included important researches in the charity organization department. In the Child-Helping Department a survey was under way of the institutions for the care of children in Virginia for the State Board of Public Charities of that State. The Depart-

ment of Child Hygiene, under the direction of Dr. Luther H. Gulick, conducted researches and promoted activities favorable to the physical, moral and intellectual welfare of children. The committee on the prevention of blindness conducted a national campaign for the prevention of blindness. The most interesting work of the foundation, however, is that carried on by the Sage Foundation Homes Company. This company obtained a large tract of land at Forest Hills, L. I., and on this it is erecting model buildings, including a railway station and other houses of attractive design and a varying cost. The general plan of the enterprise is indicated in the illustration on the following page. Forest Hills Gardens is a business enterprise and is expected to return moderate interest on the investment. It also has a distinct educational purpose. If the expectations of the promoters are realized, the enterprise will provide more healthful and more attractive homes to many people; it will demonstrate that more tasteful surroundings and open spaces pay in suburban development and would encourage more economical methods of marketing land. Forest Hills Gardens is a tract of 142 acres which has been laid out by Frederick Law Olmsted, the well known landscape architect. Its architectural development is in charge of Grosvenor Atterbury. The general director of the foundation is John M. Glenn.

**SAHABAN EXPLORATION.** See EXPLORATION.

**ST. ANDREW, BROTHERHOOD OF.** An organization of the Protestant Episcopal Church, established for the spread of religious faith among young men. The Brotherhood is divided into senior and junior departments. The number of active senior departments in 1910 was 864 and the junior departments numbered 525. The Brotherhood is active in the cause of domestic missions and is carrying on an official movement in the advancement of this cause. There were five secretaries in the field in 1910. Conferences were held in the South at Biloxi, Mississippi, July 2-4, and at Portland, Oregon, September 8-11. Two college conferences were held, one at New Haven, Conn., and the other at Ames, Ohio. James L. Houghteling, the founder of the Brotherhood, died July 28, 1910. The President of the Brotherhood is Edward H. Bonsall, Philadelphia.

**ST. HELENA.** A solitary island, of volcanic origin, in the South Atlantic, belonging to Great Britain. Area, 47 square miles; population (1909), 3577. Jamestown (1439 inhabitants), the capital and port, is a British coaling station. Fishing is carried on, and some crops are raised. Imports (1908), £36,216 (£34,175, Great Britain); exports, £6085 (£5537). Revenue, £7432; expenditure, £8104; debt, nil. Governor (1910), Sir H. L. Gallwey.

**ST. JOHN, Sir SPENCER.** An English diplomat, died January 3, 1910. He was born in 1825, and was educated in private schools. In 1848 he accompanied Sir James Brooke to Borneo as private secretary, and in 1850 acted as secretary to Brooke's mission to Siam. In 1851 he was Acting-Commissioner and Consul-General of Siam, and from 1855 to 1861 was Consul-General in the island of Borneo. In the latter year he became Chargé d'Affaires and Consul-General in Haiti, and in 1872 was Minister Resident and Consul-General at Lima, Peru. In the following year he was engaged in a

special mission to Bolivia. In 1883 he undertook a special mission to Mexico, and in the following year was appointed British Minister to Mexico. In 1893 he was transferred to Stockholm as Minister to Sweden. He wrote a number of books, including a *Life of Sir James Brooke*, and he edited a volume of essays on Shakespeare and his works.

**ST. KITTS, or ST. CHRISTOPHER.** An island of the British West Indies, forming, with Nevis and Anguilla, a presidency of the Leeward Islands (q. v.). Area, 150½ square miles (St. Kitts, 65½; Nevis, 50; Anguilla, 35). Population (1901), 46,446; estimated, 1909, 50,000. Births (1908), 1790 (illegitimate, 1118); deaths, 1269; marriages, 182. Capital, Basseterre, with 10,000 inhabitants; Charlestown (Nevis), has 1500. Primary schools (1908-9), 49, with 4649 pupils. Government grant, £1633. Secondary schools, 3, with 113 students. Area under cultivation (1908-9), 33,359 acres; under sugar cane, 15,539; under cotton, 4000 (1200 as a first crop preceding sugar cane planting). Production of sugar, 11,744 tons (11,044 exported); cotton, 474,079 pounds. Cattle are exported to neighboring islands. Imports (1908), £186,186 (from Great Britain, £70,900; British colonies, £23,008; other countries, £90,094; internal trade, £2184). Exports, £188,770 (to Great Britain, £40,296; British colonies, £103,259; other countries, £36,984; internal trade £8231). Tonnage entered and cleared, 638,941. There are four miles of telegraph line to submarine cable, and 261 miles of telephone line (St. Kitts only). Post-offices, 7. Revenue (year ending March 31, 1909), £47,133; expenditure, £45,722; estimates for 1909-10, £49,249 and £47,962. Public debt March 31, 1909, £76,000. Administrator in 1910, T. Laurence Roxburgh.

**ST. LOUIS.** See BRIDGES.

**ST. LUCIA.** An island of the Windward Islands (q. v.); a British colony. Area, 233 square miles; population (estimate, 1908), 55,097. Capital, Castries, with 7757 inhabitants. Schools, 51, with 7018 pupils enrolled. Sugar, cacao, and rum are the principal products. Imports and exports (1908), £289,775 and £152,380, respectively, against £310,309 and £122,020 in 1907. Telephone lines, 111 miles. Revenue and expenditure for the year 1909-10, £65,739 and £64,446 respectively, against £65,694 and £65,037 in 1908-9. Public debt (1908), £151,030. Administrator (1909), E. J. Cameron.

**ST. PIERRE AND MIQUELON.** The largest islands of two small groups off the southern coast of Newfoundland, which constitute a French colony. Capital, St. Pierre. Total area, 93 square miles; population (1902), 6482, of whom a number have since emigrated to Canada. Fishing is the chief industry, the islands being mainly barren rocks. The cod fisheries engaged (1907) 1281 men and 71 boats, of 3294 tons. Imports (1908), 5,242,000 francs (France, 2,539,000); exports, 6,594,000 (France, 5,607,000). Vessels entered (1907), 1520, of 109,000 tons. The local budget balanced (1908) at 476,305 francs (French expenditure, budget of 1909, 204,220 francs). Debt, January 1, 1907, 478,000 francs. Administrator (1910), M. Didelot.

**SAINTSBURY, G. E.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**ST. VINCENT.** An island of the Windward Islands (q. v.); a British colony. Area, 140

 FROM PALEOD. PLATFORM OVER GARDEN, NEW YORK

FOREST HILLS GARDENS

1140

square miles. Population (1891), 41,054; estimated 1910, 53,448. Capital, Kingstown, with (about) 4000 inhabitants. Primary schools, 27, with an average attendance of 2223 pupils. Principal products, arrowroot, cassava, cacao, cotton, cereals, peanuts, livestock, and sugar. Imports and exports for 1909, £87,810 and £88,698, against £113,713 and £94,740 in 1908. Export of arrowroot (1909), £31,792; cotton and cotton seed, £23,218. Length of telephone lines, 150 miles (about). Revenue and expenditure for the year 1909-10, £28,440 and £31,331 respectively (1908-9, £30,810 and £26,847). Public debt (1909), £2750. Administrator (1910), C. Gideon Murray. Part of the Grenadine Islands are attached to St. Vincent.

**SAKHALIN.** An island off the eastern coast of Siberia. Formerly the entire island was Russian, but that part south of the 50th parallel was ceded to Japan by the treaty of September 5, 1905. Russian Sakhalin has an area of about 16,370 square miles and upwards of 12,000 inhabitants. There are large coniferous forests, extensive beds of inferior coal, and valuable oilfields. It is administered by a military governor. To Japanese Sakhalin, or *KARAFUTO*, has been attributed an area of nearly 12,500 square miles, but in 1910 the chief of administration stated the area at about 8800 square miles. Population, over 26,000 (Japanese, over 24,000). About half the territory is forest, and an important turpentine industry is developing. The fishery was markedly successful in 1910. In that year 70 miles of railway were under construction. The budget for 1909-10 balanced at 1,868,190 yen; for 1910-11, 1,966,294; for 1911-12, 2,105,604; of the latter figure ordinary revenue and ordinary expenditure were 1,151,947 and 1,011,072 yen respectively. Deficits are covered by Japan. Chief of administration in 1910, Mr. Hiraoka.

**SALEEBY, C. W.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**SAISON OF FRENCH ARTISTS.** See PAINTING.

**SALT RIVER PROJECT.** See RECLAMATION.

**SALVADOR.** A Central American republic, on the Pacific coast. Capital, San Salvador.

**AREA AND POPULATION.** Estimated area, 7225 square miles. Estimated population at end of 1908, 1,148,624, largely mestizos and Indians. Births and deaths in 1908, 47,651 and 24,641 respectively. Principal towns: San Salvador, about 60,000 inhabitants; Santa Ana, 50,000; San Miguel, 22,000; Nueva San Salvador, 19,000; San Vicente and Sonsonate, about 18,000 each.

Primary instruction is free and compulsory. There are about 600 primary schools, with about 35,000 pupils enrolled, 25,000 in average attendance, and 1100 teachers. There are over 20 higher schools, including three normal and three technical schools and a national institute.

**PRODUCTION.** The people are engaged principally in agriculture. The leading crop is coffee (annual production about 37,500 tons). Other products are cacao, tobacco, indigo, rubber, Peruvian balsam, sugar, and bananas. Livestock (1908): 284,013 cattle, 74,336 horses, 21,457 sheep, and 422,980 swine. Various valuable mineral deposits occur, but mining is largely confined to gold and silver. There are a few small manufacturing industries.

**COMMERCE.** The imports subject to duty and

the exports have been valued as follows (imports in thousands of gold dollars, exports in thousands of silver pesos):

	1906	1907	1908	1909
Imports .....	4,164	3,441	4,241	3,788
Exports .....	16,309	15,163	15,434	16,964

In 1909 imports subject to duty were valued at \$3,787,844; free, \$389,087; total, \$4,176,931. With the silver peso valued at 37.5 cents, the exports amounted to \$3,361,340. The leading dutiable imports in 1909 were: Cottons, \$1,492,000; cotton yarn, \$128,363; flour, \$260,708; hardware, \$199,427; drugs, etc., \$193,214; shoes, etc., \$145,962; coffee sacks, \$117,904; foodstuffs, \$102,863. The principal exports in 1909 were: Coffee, 63,330,077 pounds, valued at \$4,590,705; gold (bars), \$688,510; silver (bars), \$300,745; indigo, 418,969 pounds, \$257,247; sugar, 1850 tons, \$136,575; gold and silver (not included above), \$111,584; balsam, 143,098 pounds, \$103,681. Imports from and exports to the countries commercially most important were as follows in 1909: Great Britain, \$1,438,614 and \$449,894 respectively; United States, \$1,344,316 and \$1,879,454; Germany, \$482,342 and \$1,061,316; France, \$285,170 and \$1,629,063; Italy, \$157,708 and \$430,811. The principal exports to the United States were: Coffee, \$770,201; gold, \$688,510; silver, \$300,745. Coffee export to France, \$1,601,013; to Germany, \$937,494; to Great Britain, \$196,342; to Italy \$430,811.

**COMMUNICATIONS.** In 1909 there were in operation 156 kilometres (97 miles) of railway (narrow gauge). There is a line from the port of Acajutla to San Salvador (105 kms.), with a branch to Santa Ana (40 kms.), and another line connects the capital with Santa Tecla (18 kms.). A railway between San Miguel and La Unión is under construction. Telegraph, 179 offices, with 2479 miles of line; telephone, 137 offices, 2049 miles of line; post-offices, 85.

**FINANCE.** Revenue and expenditure in 1908 amounted to 10,676,339 and 12,656,657 pesos respectively (the silver peso is worth 37.5 cents); in 1909, 10,716,099 and 11,856,002. Principal sources of revenue in 1909: Import duties, 5,841,734 pesos; liquor taxes, 2,377,423; public services, 944,061; export duties, 882,381. Larger items of expenditure in 1909: War and marine, 3,226,478; public debt, 3,207,924; interior, 1,808,006; fomento, 1,242,967. On January 1, 1909, the public debt stood at \$9,531,319 (gold) and 6,260,196 pesos (silver). The former amount included the external debt of \$8,572,146. On January 1, 1910, the gold debt was \$9,745,480, and the silver debt 5,534,847 pesos.

**GOVERNMENT.** The chief executive authority is vested in a president, elected by popular vote for four years and assisted by a cabinet of four members responsible to the National Assembly. The legislative power rests with this body, which is unicameral and is composed of 42 members elected annually. The President in 1910 was Gen. Fernando Figueroa, who was inaugurated March 1, 1907.

**SALVARSAN.** See ARSENO-BENZOL.

**SALVATION ARMY.** A religious body founded on military principles by William Booth in 1878, although as a Christian mission it had existed in London since 1865. The corps and outposts of the Army in the United States in 1910 numbered 896. The indoor attendance at its meetings was 8,248,497, and the open-air

attendance 1,526,971. The local officers and bandmen numbered 6104. There were 54,551 Junior meetings held with an attendance of 1,552,998. The relief institutions for the poor include 107 industrial homes, to which in 1910 14,668 men were admitted; 79 workingmen's hotels with shelter accommodations for 6592; 19 slum posts, by which 2856 sick cases and 21,344 families were visited during the year; 26 rescue homes to which 1372 girls and 938 children were admitted; a bureau for missing friends, through which 206 persons were found during the year; 3 colonies embracing 2569 acres of land, in which were 399 persons. The Army distributed 18,335 Thanksgiving dinners, and 344,062 Christmas dinners. It afforded temporary relief to persons outside industrial homes and hotels numbering 309,591 during the year. Summer outings were given to 3972 mothers and 35,949 children; 1,593,834 pounds of ice and 4,579,788 pounds of coal were distributed during the year. The above figures cover the work for the year ending September 30, 1910, in the United States only.

The United States is divided into two Departments with the National Headquarters in New York City. Miss Evangeline Booth is in charge with Colonel William Peart as Chief Secretary. The Department of the West which administers the affairs of the Western States has its Headquarters in Chicago. Commissioner Thomas Estill is in charge with Colonel George French as Territorial Secretary.

**SAMARIUM.** See **ATOMIC WEIGHTS.**

**SAMBOURNE, EDWARD LINLEY.** An English cartoonist, died August 3, 1910. He was born in London in 1845 and was educated at the City of London School and at Chester College. At the age of sixteen he was an apprentice at the Marine Engine Works of John Penn & Sons in Greenwich. He early displayed a talent for drawing and having made the friendship of Mark Lemon, editor of *Punch*, he contributed a small drawing to that periodical in April, 1867. From that date he remained a contributor. He was for a time co-cartoonist with Sir John Tenniel and from 1901 to the time of his death was chief cartoonist of *Punch*. Among his publications are *New Sandford and Merton*, illustrated (1872); *Our Autumn Holiday on French Rivers* (1874); illustrations for Charles Kingsley's *Water Babies* (1876), and illustrated editions of many other books. He designed a diploma for the Fisheries Exhibition of 1883 and was one of the Royal commissioners, and sole juror in class 7, of the fine arts of the Paris exposition in 1900.

**SAMSONITE.** See **MINERALOGY.**

**SAMUEL, H. L.** See **GREAT BRITAIN, Government.**

**SAMOS.** One of the Anatolian Islands, a principality, under a Greek prince appointed by the Porte, to which it is tributary in the sum of 200,000 piastres annually. Its integrity is guaranteed by France, Great Britain, and Russia under the act of December 11, 1832. Area, 181 square miles; population, 53,424. Capital, Vathy (25,000 inhabitants). The island is fertile, and wine, raisins, olive oil, and tobacco are the chief products and exports. Imports (1909), 29,673,545 piastres (1 piastre = 4.4 cents); exports, 27,835,312 (wine, 12,000,000; cigarettes, 3,675,000). Revenue (budget

1910), 3,716,968 piastres; expenditure, 3,627,496; debt, 2,570,500. Prince-governor (1910), Andreas Kopassiss Effendi.

**SAN ANTONIO.** See **MUNICIPAL GOVERNMENT.**

**SANDERS, JARED YOUNG.** An American public official, elected July 5, 1910, United States Senator from Louisiana to succeed the late Senator McEnery (q. v.). He was born in St. Mary's Parish, La., in 1869 and graduated from Tulane University in 1893. He studied law and was admitted to the bar and practiced at Franklin and New Orleans. He was elected a member of the Louisiana House of Representatives in 1892 as an anti-lottery candidate in the famous struggle to break up the Louisiana lottery. He was a member of the constitutional convention in 1898 and was prominent in securing the franchise law which prevents negroes from voting. In 1900 he was elected Speaker of the House of Representatives. From 1904 to 1908 he was lieutenant-governor and in 1908 was elected governor of the State for the term 1908-12. Governor Sanders's election met with some opposition on the ground first, that he had not been nominated by a primary election, which the Louisiana law requires, and second that he came from the same parish and the same town as Senator Foster, being indeed the law partner of the latter. The custom has been in Louisiana that one Senator shall come from the northern and one from the southern part of the State. Further objection was urged that he intended to retain the governorship until December, 1910, when the Senate resumed its session. All these objections, however, were not sufficient to defeat him, and his election was practically unanimous.

**SANFORD, SAMUEL SIMONS.** An American musician and educator, died January 6, 1910. He was born in 1849 and studied music under Klingman, Mason, and Mills in the United States, and under Rubinstein, Battiste, and Ritter abroad. His high talents won him a prominent place among musicians and in 1894 he was appointed professor of applied music at Yale University. This position he held until his death. In coöperation with Professor Horatio W. Parker, he developed the musical department of the University, preferring this labor rather than the easier fields of professional accomplishment.

**SAN FRANCISCO.** See **CALIFORNIA, and MUNICIPAL OWNERSHIP.**

**SANITATION.** Local, State, and national health-protective work continued to grow in amount and efficiency during the year and to receive increasing appreciation from the general public. The movement to secure a national bureau or department of health was continued with unabated zeal, but Congress failed to take action on the subject. Of a number of Congressional bills effort centred on the Owen bill (see **HYGIENE**). Unexpected opposition to the bill arose from those who claimed that the real object of the Owen bill was to further the American Medical Association in general, and practitioners of the old school in particular. As a matter of fact, the bill did not include the recognition of any school of medicine, and only a relatively small part of the work which would be done under the bill, if enacted, is medical in character. State or preventive medicine, so-called, is largely sanitary rather than medical, having to do with the receiving and protection

of ample supplies of pure air, water, and food, and this requiring, in turn, the proper disposal of various domestic, manufacturing, and city wastes. The engineering character of much of the work of boards of health is now reorganized by the rapidly-increasing number of engineers appointed to membership. State and local boards of health are engaged to serve as executive officers. The most notable recent example of this was the appointment of a civil and sanitary engineer as chief of the bureau of health of the city of Philadelphia. A large part of the valuable work accomplished by the health boards or departments of the States of Massachusetts, New York, New Jersey, Pennsylvania, and Ohio is directed or carried on by sanitary engineers, ably assisted or supplemented by sanitary chemists and biologists. Besides water-supply and sewerage and the purification works often connected with each, modern sanitation includes street cleaning, garbage collection and disposal, drainage and filling for mosquito extermination, rat-proof construction for combating the plague, numerous mechanical and other devices or operations for disinfecting houses and dairy utensils, various means for controlling dust in factories and on and from highways, and other agents too numerous to mention. In all the ways just indicated there has been notable activity of late. Particular mention may be made of the ditching and draining of salt marshes in New Jersey for mosquito extermination, carried on at State expense under the direction of Prof. John B. Smith of New Brunswick, State Entomologist. In no field, perhaps, was more well-directed energy in behalf of public health directed in 1910 than in connection with the sanitary protection of milk supplies. Besides much municipal and a little State milk and dairy inspection, various important milk conferences were held in 1910. Two great aims of recent pure milk campaigns have been the protection of milk from infection from tuberculous cows and from a needless number of bacteria due to dirt and high temperatures, with resulting excessive infant mortality. The tuberculin test of all cows, with the removal of tuberculous cattle from the herds, and frequent general inspections to insure the proper sanitation of stables, bottling and shipping plants, milk stores and milk delivery carts, are now recognized essentials of a safe milk supply. The alternative now presented to milk dealers in a number of cities is either the tuberculin test and thorough sanitary inspection, with correction of sanitary defects, or else the pasteurization of the milk. By pasteurization is meant raising the temperature of the milk to from 140° to 165° F., and keeping it there long enough to kill disease germs. The "holding method" of pasteurization, or subjecting milk to heat for a considerable period is considered essential, while "commercial pasteurization," or heating for only an instant, is no longer approved by sanitarians. See also GARBAGE AND REFUSE DISPOSAL, SEWERAGE, SEWAGE PURIFICATION, STREET CLEANING, WATER WORKS, and WATER PURIFICATION.

**SAN JOSÉ SCALE.** See HORTICULTURE.

**SANTAYANA, GEORGE.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**SANTO DOMINGO.** The DOMINICAN REPUBLIC, occupying the eastern and larger part of the island of Haiti. Capital, Santo Domingo.

**AREA, POPULATION. ETC.** Estimated area, 18,045 square miles. The estimated population is upwards of 600,000, mostly of mixed Spanish and African blood; one estimate, relating to the end of 1908, places the population at 673,611. Principal towns: Santo Domingo, 20,000 inhabitants; Puerto Plata, 17,500; Macoris, 15,000; Santiago, 12,000. Public schools, at end of 1908, 440, with an enrollment of 15,901. State religion, Roman Catholicism.

**PRODUCTION AND COMMERCE.** There are no statistics of production, but the leading crops are sugar, tobacco, coffee, and bananas. Honey is produced in large quantities, and cattle raising is important. The forests contain valuable building and cabinet woods. Various minerals occur, including gold, iron, coal, copper, petroleum, and salt, but their exploitation is almost negligible.

Imports and exports have been valued as follows:

	1906	1908	1909
Imports .....	\$4,281,337	\$5,127,463	\$4,645,378
Exports .....	6,534,872	9,486,344	8,177,330

Leading imports in 1909: Cotton manufactures, \$925,970; iron and steel manufactures, \$609,416; rice, \$414,271; flour, \$309,282; meat and dairy products, \$292,006; oils, \$226,065. Principal exports in 1909: Sugar, \$3,304,931; cacao, 32,672,671 pounds, valued at \$2,759,191 (\$4,269,047 in 1908); leaf tobacco, \$1,239,486; coffee, \$128,202 (\$325,153 in 1908); bananas, \$125,766; wax, \$123,769; cattle hides, \$70,996. Imports from and exports to the principal countries, in thousands of dollars:

	Imports		Exports	
	1908	1909	1908	1909.
United States .....	2,892	2,593	4,212	4,765
Germany .....	868	912	4,220	2,190
Great Britain.....	789	577	20	77
France .....	212	189	908	924

**COMMUNICATIONS.** Puerto Plata is connected by rail with Santiago and Moca (state railway), and Sánchez with La Vega, with a branch from Macoris to Jina and another from Salcedo to Cabullas. Total length of railways in the republic, 282 kilometres (175 miles); in addition, there are about 362 kilometres (225 miles) of private lines for the large sugar plantations. A line is projected to connect Moca and Salcedo. Telegraph: 52 offices, with 2044 kilometres (1270 miles) of line (of which, 1444 kilometres state-owned). Post-offices, 81.

**FINANCE.** The standard of value is the United States dollar. Revenue and expenditure for 1909 are stated at \$4,523,160 (\$3,862,173 ordinary) and \$4,532,323 respectively. Principal items of ordinary revenue: Customs, \$2,936,760; spirit excise, \$281,598; Central Railway, \$247,047. Under an American-Dominican treaty looking to the adjustment of the debt, a loan of \$20,000,000 was authorized and an American receivership of customs, from April 1, 1905, established. The receiver has authority to deposit 55 per cent. of the customs revenue (less expenses of collection) for the national creditors. From April 1, 1905, to July 1, 1910, the receiver collected and distributed in accordance with the treaty stipulations \$16,553,839. Of the authorized loan, \$15,743,167 had been issued December

31, 1909, the amount of old obligations cancelled thereby being \$28,015,335. The reorganization of Dominican finance has proceeded most satisfactorily under the receivership.

**GOVERNMENT.** The constitution of April 1, 1908, vested the executive authority in a president, elected indirectly for six years and assisted by a cabinet. The legislative power devolves upon a congress of two houses, the Senate (12 members) and the Chamber of Deputies (24 members). The president in 1910 was Gen. Ramón Cáceres, who was installed in 1906 to complete his predecessor's term and was inaugurated for a full term on July 1, 1908.

The republic has one gunboat and four revenue cutters.

**SAO THOMÉ AND PRINCIPE.** Two islands off the coast of French Equatorial Africa, constituting a Portuguese colony. Total area, about 360 square miles; population (1900), 42,103 (negroes, 40,639). Cacao is the chief export, a considerable portion of the world's supply coming from this source; coffee, rubber, and cinchona are also exported. Imports (1908), 3,185,005 milreis; exports, 7,920,836. Exports of cacao to Lisbon in 1908 amounted to 477,175 bags (of 132 pounds each); re-exports from Lisbon to United States, 91,896 bags, or about one-eighth of the total American import. Vessels entered (1908), 190, of 494,000 tons. A railway (9 miles) is under construction on São Thomé. Estimated revenue (1909-10), 869,956 milreis; expenditure, 732,805. Governor (1910), vacant.

**SAPPHIRES, SYNTHETIC.** See **CHEMISTRY.**

**SARAWAK.** A British protectorate on the west coast of Borneo. Approximate area, 50,000 square miles; population, 500,000 (Malays, Dyaks, Kayahs, Kenyahs, Chinese, etc.). Capital, Kuching. The country produces sago, gutta-percha, rubber, beeswax, birds'-nests, tobacco, rice, rattans, pepper and gambier. Coal exists in great quantities; gold, silver, antimony, diamonds, and quicksilver occur. Total imports (1909), 5,325,759 dollars Mexican; exports, 6,153,207 (gold export, 1,130,760 dollars). Revenue (derived mainly from opium, gambling, arrack, Malay exemption tax, etc.) in 1909, 1,346,961 dollars; expenditure, 1,152,736. The territory is administered by the rajah, Sir Charles Johnson Brooke (born June 3, 1829); succeeded on the death of his uncle, June 11, 1868; married (1869) to Margaret Alice Lily de Windt. Heir-apparent, Charles Vyner Brooke (born Sept. 26, 1874).

**SARCOMA.** See **CANCER.**

**SARDIS, EXCAVATIONS AT.** See **ARCHAEOLOGY.**

**SASKATCHEWAN.** A province of Canada (since September 1, 1905). Capital, Regina. Area, 250,650 square miles. Population (est. 1910), 377,590. For details, see **CANADA.** The government consists of the Lieutenant-Governor, appointed by the Governor-General of Canada, the executive Council (responsible ministry), and the unicameral Legislative Assembly of 41 elected members. In 1910, Lieutenant-Governor, George William Brown; Premier, Walter Scott.

**SATOLLI, FRANCESCO.** A Roman Catholic prelate, died January 8, 1910. He was born in Perugia, Italy, in 1839, and was educated in the diocesan seminary of that city, then presided over by Gioacchino Pecci, Archbishop of Perugia, who afterwards became Pope, as Leo XIII. When Pope Leo went to Rome,

Satolli was summoned to the Vatican. In 1886 he was appointed president of the Academy of Noble Ecclesiastics and in 1889 was created Archbishop of Lepanto. In 1889 he was deputed by the Pope to represent the latter on the occasion of the celebration in Baltimore of the centenary of the Catholic hierarchy in the United States, and also at the inauguration of the Catholic University of the United States in Washington. During this visit he made the acquaintance of President Harrison and other public officials, and he was greatly impressed with the possibilities for the advancement of the church in the United States. Largely as a result of this visit and the accounts which he carried back to the Pope, he was appointed Apostolic Delegate to the Church in the United States in 1893. In 1895 he was elevated to the College of Cardinals and was invested with the beretta by Cardinal Gibbons in the Baltimore Cathedral in January, 1896. In the same year he returned to Rome. During his stay in the United States Cardinal Satolli acted as peacemaker between Dr. Edward McGlynn and Archbishop Corrigan. The former had been deposed from the rectorship of St. Stephen's because of his attitude on questions that were prominent then and because of his friendliness to Henry George, and the promotion of his doctrines through the Anti-Poverty Club. Through Cardinal Satolli's efforts Dr. McGlynn was restored to his priestly privileges, and was placed in charge of a parish in Newburg, N. Y. On the death of Pope Leo, Cardinal Satolli was mentioned as his possible successor.

**SAUSAGE.** See **MEAT AND MEAT INSPECTION.**

**SAVINGS BANKS.** The 1910 report of the Comptroller of the Currency summarized the reports of 638 mutual and 1121 stock savings banks in the United States. The mutual banks were all in the New England and Eastern States, except 21 situated in West Virginia, Ohio, Indiana, Wisconsin, Minnesota, and California. These had deposits aggregating \$3,360,563,000, an increase of \$215,979,000 over 1909. Almost one-half these deposits, or \$1,527,000,000, were in banks in New York State; and 23 per cent., or \$761,000,000, in Massachusetts. The depositors in mutual banks numbered 7,481,649, of whom 3,331,135 were in New England, and 3,832,438 in the Eastern States; there were 2,886,910 depositors in New York, 2,078,953 in Massachusetts, and 570,065 in Connecticut. The average interest rate on deposits was 3.92 per cent.

The stock savings banks, which are run with a view to dividends to stock holders, were distributed as follows: 8 in New Hampshire; 15 in the Eastern States; 149 in the Southern; 734 in the Middle Western; 59 in the Western; and 156 in the Pacific States; 663 were in Iowa alone. Their total deposits were \$709,922,403; the depositors numbered 1,661,259; and the average interest rate was 3.56 per cent.

There were thus in the United States 9,142,908 depositors, with \$4,070,486,000 to their credit, an average deposit of \$445.20. The average deposit in the more important States were: Massachusetts, \$366; Connecticut, \$481; New York, \$529; Pennsylvania, \$442; New Jersey, \$345; Ohio, \$375; Iowa, \$392; California, \$797. In 1900 there were only 1002 savings banks in the United States, with \$2,449,000,000 deposits; thus there was a very remarkable

growth for the decade just passed. This is shown also by the increase of the average per capita deposit in United States savings banks from \$31.78 in 1900 to \$45.05 in 1910.

School savings banks numbered 8515 on January 1, 1910, in the United States, Canada, Porto Rico and South and Western Australia. The number of pupils with deposits was 203,458, and they had \$870,696 to their credit. In the United States there were 7065 banks, with 160,488 depositors, and \$721,732 deposits.

Statistics of savings banks of the world as compiled by the Bureau of Statistics from official sources follow. See also POSTAL SAVINGS BANKS.

Glen State Reservation, Letchworth Park, Fort Brewerton and Philipse Manor Hall. William Pryor Letchworth, the donor of Letchworth Park to the State of New York, died during the year. In accordance with the terms of the deed of gift, Mr. Letchworth retained a life tenure of the property. At his death the legal guardianship devolved upon the Society. The Society has been prominent in preventing the disfigurement of natural scenery by the erection of bill boards or by other advertising methods. The honorary president is J. Pierpont Morgan, the president, George Frederick Kunz, and the sec-

retary is Edward Hagan Hall. The landscape architect of the society is Samuel Parsons.

**SCHIAPARELLI, GIOVANNI VIRGINIO.** An Italian astronomer, died July 4, 1910. He was born at Savigliano, Piedmont, in 1835. After studying in the schools of his native town he went to the University of Berlin, where he studied with the famous astronomer, Encke. He afterwards went to Pulkova where he

studied under Struve. He returned to Italy in 1859 and was at once appointed an assistant in the observatory of Brera at Milan. He became director of this observatory in 1896 and held this position until his retirement in 1900. His first important discovery was that of the planetoid Hesperia No. 69 in 1861. He then established his reputation by pointing out the coincidence of the orbits of certain comets with the paths of the shooting star showers. His observations were confirmed in a monograph on the falling stars, printed in Florence in 1867 and in another work in 1871. His next work was a series of observations of the double stars, involving elaborate calculations as to their distances apart. Following this came his observations on Mars, involving his theory of the habitation of the planet by sentient beings akin to mankind. When he published his maps and the descriptions of the markings he had made, many astronomers met them with open opposition. They insisted that while they had been observing Mars all their lives they had seen no such markings. Others, however, defended the Italian's ideas and his theory of the habitation of Mars has defenders to this day. This discussion led to a world-wide study of the planet, which established the existence of the markings as described by Schiaparelli, also the presence of an atmosphere and of water on the planet, with a probability of vegetation. Besides Mars he devoted considerable attention to the planet Mercury and announced in 1889 that he had been able to fix the period of its revolution at 88 days, a period exactly corresponding with its revolution around the sun so that, like the moon as regards the earth, the planet always presents the same portion of its surface to its primary. Schiaparelli was the author of a number of important works on astronomy. Besides those on comets and falling stars already mentioned, he published *The Precursors of Copernicus in Antiquity* (1873), *Observations on the Movement of Rotation and the Topography of the Planet Mars* (1878-86), and *Astronomy in the Old Testament* (1905).

**SCHILLER, F. C. S.** See LITERATURE, ENGLISH AND AMERICAN, *Philosophy and Religion*.

**SCHILLING, JOHANNES.** A German sculptor, died March 22, 1910. He was born at Mittweida, Saxony, in 1828 and studied at Dresden and Berlin. In the former city he won a prize which enabled him to study for three years at Rome. He returned to Dresden in 1856 and became professor of the academy in that city in 1868. His first works to attract attention were the four admirable groups of "Morning," "Noon," "Evening" and "Night" on the Brühl Terrace in Dresden. Notable also are the colossal group of "Dionysos and Ariadne" on the façade of the Royal Theatre at Dresden and the monument to Emperor William I. at Wiesbaden. His masterpiece is the famous national monument in the Niederwald, unveiled in 1883. His works represent the transition from the classical to the romantic style and are characterized by a high sense of the beautiful and by careful execution.

**SCHÜRER, EMIL.** A German Lutheran theologian, died in May, 1910. He was born at Augsburg in 1844, and studied theology at Erlangen, Berlin and Heidelberg. He became professor of theology successively at Leipzig, 1873, Giessen, 1878, Kiel, 1890, and Göttingen, 1895. He published *Die Gemeindeverfassung der Juden in Rom* (1879), *Die ältesten Christengemeinden im römischen Reich* (1894), and the work by which he is best known, *Geschichte des jüdischen Volkes im Zeitalter Jesu Christi* (1886-90; Eng. trans., 1886-90). After 1876, with Adolf Harnack, he edited the *Theologische Literaturzeitung*.

**SCIENCES, NATIONAL ACADEMY OF.** A society organized for the examination and investigation of any subject of science or art, and for making reports at the call of the United States government, the actual expense of such examination and report to be paid out of the appropriation made for that purpose. It was incorporated by act of Congress May 3, 1863. The academy can not, under any circumstances, receive compensation from the government for its services. Annual reports are made each year at the meetings, which are held at such places in the United States as may be specially designated. The annual meeting is held in Washington on the third Tuesday in April. The academy is composed of members, honorary members and foreign associates. Citizenship is prerequisite to full membership, while the number of foreign associates is limited to 50. The academy had on December 1, 1910, a membership of 115, with 44 foreign associates. The officers are elected for six years. Those in office in 1910, with dates of expiration of their terms, were as follows: President, Ira Remsen (1913); vice-president, Charles D. Walcott (1913); foreign secretary, George E. Hale (1916); home secretary, Arnold Hague (1913); treasurer, S. F. Emmons (1914). The autumn meeting in 1910 was held at St. Louis November 8-10. The following papers were read: "Some Problems of Stellar Motion," by George C. Comstock; "Preliminary Note on the Sun's Velocity with Respect to Stars of Spectral Type A," by Edwin B. Frost; "On the Origin of Binary Stars," by Forest R. Moulton; "The Cycadophytes," by John M. Coulter; "A Monograph of Agave in the West Indies," by William Trelease; "The Mode of Chromosome Reduction," by Reginald R. Gates; "The Front Range of the Rocky Mountains in Colorado," by William M. Davis; "Mutualism, Parasitism and Symbiosis," by George T. Moore; "A Molecular Rearrangement leading to the Formation of Anidines," by Ira Remsen.

**SCOFIELD, WALKER KEELER.** An American rear-admiral of the United States Navy, died August 6, 1910. He was born in Stamford, Conn., in 1839 and entered the navy as assistant surgeon in 1861. In 1868 he graduated from the College of Physicians and Surgeons. In 1864 he was made passed assistant surgeon in the navy and surgeon in 1866. In 1883 he

was made medical inspector and was promoted to be medical director in 1890. He was retired with the rank of rear-admiral in 1901.

**SCOTLAND.** See GREAT BRITAIN.

**SCOTT, HARVEY W.** An American newspaper editor, died August 7, 1910. He was born in Tazewell county, Ill. in 1838. He was reared on a farm and worked at various occupations, finally removing to Oregon in 1852. He joined a militia company and was engaged in several affrays with the Indians in the Puget Sound country. He worked his way through the common schools, and was a hard student, particularly of the English classics. He joined the staff of the *Portland Oregonian* in the early 60's, when it was a small and unimportant paper. He became its editor in 1865 and remained in that position until his death. In addition to being editor of the journal he was its principal owner. Through his aggressive and independent efforts the *Oregonian* became one of the most influential papers in the West. In 1896, when the sentiment for free silver prevailed more or less throughout the western part of the country, Mr. Scott, who believed in the gold standard, maintained his attitude and as a consequence lost many subscribers. Oregon, however, was the only Pacific coast State that was carried solidly for gold in that struggle. He was always a Republican, with a leaning toward lower tariff. Some of his political quarrels, particularly that with Senator Mitchell of Oregon, became historic in the Northwest.

**SCOTT, ROBERT F.** See POLAR RESEARCH.

**SCOTT, WILLIAM EARL DODGE.** An American ornithologist, died August 27, 1910. He was born in Brooklyn, N. Y., in 1852 and graduated from Harvard College in 1873. From 1874 to 1885 he was curator at Princeton University and from 1897 to the time of his death was curator of the department of ornithology at that university. He did field work for the British Museum, the American Museum of Natural History and the Museum of Comparative Zoölogy. Among his published works are *Bird Studies* (1902), *Birds of Patagonia, No. 1*, (1903), *No. 2* (1910). He also contributed many technical articles on birds to scientific journals and wrote many popular articles on ornithological subjects for magazines.

**SCOTTISH SOUTH POLAR EXPEDITION.** See POLAR RESEARCH.

**SCRIBNER, GILBERT HILTON.** An American lawyer and scientist, died January 5, 1910. He was born in Monroe county, N. Y. in 1831 and was educated at Oberlin College. He studied law, and practiced at the bar from 1856 to 1868. In the latter year he entered the legislature, and from 1870 to 1873 was Secretary of State. In 1883 he published a monograph, entitled *Where Did Life Begin?* in which he originated the theory of the circumpolar origin of life. He also contributed to the *Popular Science Monthly* and other scientific journals. He was a member of several learned societies in New York City.

**SCULPTURE.** In New York's 1910 Spring Academy exhibition the display of sculpture had to be small owing to lack of room. Gertrude V. Whitney's "Paganism Immortal," the nude figures of a man and woman in the style of Rodin, was ambitious and conspicuous. Robert I. Aitken's portrait of George Bellows; Augustus Lukeman's "Genius of the Forest,"

Victor D. Brenner's portrait of Theodore Roosevelt, and one of Henry Irving by Courtenay Pollock were among other contributions worthy of mention. In the Winter Academy D. C. French's impressive memorial to Alice Freeman Palmer, late president of Wellesley College, held the place of honor. A woman of majestic mien guides a young girl who holds the lamp of knowledge. A fountain figure by S. E. Fry; Robert I. Aitken's portrait of Henry R. Wollcott; Karl Bitter's portraits of Dr. Angell of the University of Michigan, and of Mrs. Edwin Emerson; J. Scott Hartley's "Fisherman's Luck;" "Bondage," the strong figure of a woman, by C. A. Heber; some small pieces in figurine style, delightful in their grace, by Bessie Potter Vonnoh, and the study of a small girl by Edward Berge, were perhaps the best things shown. A special exhibition of sculpture by women showed some clever pieces. Gertrude V. Whitney's "Aztec Fountain" for Washington; "A Victory," by Sallie James Farnham; Janet Scudder's "Sun Goddess" for the Brooklyn Institute, and Helen F. Mear's portrait busts were among the important contributions.

Among the most important statues unveiled during the year were Gutzon Borglum's heroic Lincoln, a seated figure made for Newark, New Jersey; "The White Woman of the Genesee," a woman's figure in Indian dress, for Portage, New York, by Henry K. Bush-Brown; Saint Gaudens's bronze memorial of Phillips Brooks, erected outside of Trinity Church, Boston; and Paul W. Barlett's figure of Philosophy for the New York Public Library façade, one of four to be completed by this sculptor.

Much interest was shown in Paris in the exhibition of George Grey Barnard's symbolical groups, "The Life of Humanity," for the Pennsylvania Capitol. Critical judgment was divided as to Mr. Barnard's success in blending modern realism with classical conventionalism. Burr Miller, an American, also showed in Paris his heroic figure of Thomas B. Reed for Portland, Me. Of the French sculpture of importance exhibited during the year were two exquisite fountain designs, one by Félix Charpentier, and the other by Raoul Larche. A peasant group in mottled granite, by Emile Guillaume, attracted attention.

Thomas Brock's bronze statue of Henry Irving in Charing Cross, London, was perhaps the most important sculpture of the year in England. It was erected by the members of the theatrical profession and represents the late actor standing in his doctor's gown. The conventional masks of Tragedy and Comedy appear in the base. A quadriga by Adrian Jones, for Constitution Hill, London, was one of the largest and most ambitious pieces of sculpture of the year by an English sculptor.

In Germany, the exhibition in Leipzig of a life-size group entitled "The Vampire," by Miss Kuhne Beveridge, an American, caused discussion by the realistic treatment of the nude figures of a man and woman. German sculptors were gratified by the selection of Hermann Hahn's design for the Goethe Memorial to be erected in Lincoln Park, Chicago. The design represents the lightly draped figure of a young man holding an eagle. Above the pedestal, is a portrait in relief of the poet.

In Vienna, a marble statue by Edmund Hellmer in the courtyard of the university, was

greatly praised for its simple beauty. A draped female figure sits in dream-like contemplation. At the feet of the figure, which is eighteen feet high, is a fountain.

**SCULPTURE SOCIETY, NATIONAL.** A society incorporated in 1896 for the purpose of spreading the knowledge of good sculpture, fostering the taste for ideal sculpture and its production, the promotion of the decoration of public and other buildings, and the improvement of the quality of the sculptor's art as applied to the industries. There are about 250 members, of whom about 100 are sculptor members, whose work has to pass a special committee before they can be recommended to election. The Society inaugurated in 1909 a circulating exhibition of small bronzes and this was continued in 1910. Exhibitions were held in Buffalo, Pittsburg, St. Louis and Chicago. The honorary president of the Society, J. Q. A. Ward (q. v.) died during the year. A friendly competition for the medal of the Society, confined to its members, was carried on during the year. The design submitted by the president, Hermon A. MacNeil, was selected. The officers of the Society in 1910 were Hermon A. MacNeil, president; John M. Carrere, first vice-president; F. G. R. Roth, second vice-president; I. Wyman Drummond, treasurer; and J. Scott Hartley, secretary.

**SELIGMAN, WILLIAM.** An American financier, died January 6, 1910. He was born at Bayersdorf, Germany, in 1822 and in 1839 emigrated to the United States. He settled in Alabama, where he engaged in business until the outbreak of the Civil War, when he was obliged to leave on account of his Unionist sympathies. With seven brothers, who had come from Germany in the meantime, he established a dry-goods and commission business, in New York City. This, later, was converted into the banking firm of J. & W. Seligman & Co. The California branch of the drygoods business was also converted into a bank in San Francisco. The Paris branch of the house was established in 1864 by William Seligman. In the same year the London house was opened, with two brothers, Isaac and Leopold in charge, and the Frankfort house in charge of Henry and Abraham. During the Civil War Mr. Seligman aided the authorities in New York City in suppressing the draft riots, and soon after the establishment of the Paris house he succeeded in interesting French investors in United States government bonds. In recognition of these and other services, President Grant appointed the Seligman houses fiscal and naval agents of the government in 1868. This post they have held since with the exception of the two Cleveland administrations. Mr. Seligman was for many

years dean of the American Chamber of Commerce in Paris. For his services as a banker and in promoting trade he was made an officer of the Legion of Honor, in 1878.

**SENEGAL.** The oldest colony in French West Africa (q. v.). Area, 192,000 square kilometres. Recently estimated population, 1,172,096 (4229 French). Capital, St. Louis, with (1908) 22,093 inhabitants. Dakar (administrative headquarters for French West Africa) has 24,914; Rufisque, 12,457; Gorée, 1560. Schools (1908): 38 official, with 3717 pupils; 2 private, with 94; Mussulman, 1316, with 10,717. The following are the principal products with export values for 1908: Peanuts, 32,889,312 francs; rubber, 3,865,547; gum arabic, 1,581,945; animal products, 1,005,676; live animals, 253,261; rice 33,587; smoked and dried fish, 24,677. Total imports and exports (1908), not including those of Upper-Senegal-Niger, 67,069,680 and 45,474,069 francs respectively. Official figures for 1907 (54,696,406 and 43,858,850) included both colonies. Of the 1908 imports 25,346,000 francs' worth came from foreign countries, the remainder from France and French colonies; of the exports, to foreign countries, 15,437,000. Vessels entered (1908), 1142, of 293,386 tons; cleared, 1136, of 286,001 tons. The railway from Kayes to Koulikoro has a length of 555 kilometres; and that connecting Dakar, Rufisque, and St. Louis, 264 kilometres. There are 1351 miles of telegraph lines and about 100 of telephone. Dakar is connected by cable with France (Brest). A steamer service on the Senegal connects St. Louis with Kayes (490 sea miles). Number of post and telegraph offices, 44. Revenue and expenditure (1908) for the territories of direct administration, 2,069,492 (less 131,935 applied to the deficit of 1906) and 1,812,387 francs respectively; for the protectorate, 4,840,632 and 4,509,029. The Bank of West Africa has a capital of 5,895,000 francs and 254,000 francs reserve funds. The lieutenant-governor of Senegal (1910, J. M. Gourbeil) is under the direction of the governor-general of French West Africa. The colony sends one deputy to the French Chamber.

**SERUM THERAPY.** An enormous amount of investigation into the problems of serum therapy and of immunity, natural and artificial, was undertaken during 1910. While no new serums were introduced, a better understanding of the value of this class of remedies was arrived at. Normal blood serum was employed by J. E. Welch in the treatment of *hemophilia neonatorum*—a very fatal form of hemorrhage in new born infants. Carrel, of the Rockefeller Institute, had previously succeeded in saving the life of a moribund infant by anastomosing the child's popliteal vein with the father's radial artery and allowing his blood to flow into the vessels of the exsanguinated infant. This method is technically difficult, and a suitable donor of blood is not always at hand. Welch, therefore, drew off the blood from the donor into a sterile flask, allowed it to clot, and then injected subcutaneously the separated serum in doses of 10 c. c. every two hours, in severe cases of bleeding. The results were per-

**MEMORIAL TO ALICE FREEMAN PALMER AT WELLESLEY COLLEGE**  
**DANIEL C. FRENCH, SCULPTOR**

1700

fect. Whereas seventeen out of eighteen cases of hemophilia neonatorum, occurring before the institution of this method, had died, of the eight children treated with the human serum, all made rapid recoveries.

**VACCINE THERAPY.** A serum is made by the inoculation of an animal with successive doses of bacteria or toxins, thus producing in its blood a certain degree of immunity. This blood or serum, when injected into another animal, or human being, increases by so much his resistance to the particular bacteria for which the serum is prepared. The immunity conferred is fleeting and passive, and, with the exception of diphtheria antitoxin and possibly cerebrospinal meningitis serum, the prophylactic value is greater than the curative power. Vaccines, on the other hand, aim to develop an active immunity in the blood of the sick individual. Vaccines are prepared in the following way: A culture is made of the particular germ desired; this culture is then killed by heat and suspended in normal salt solution in such a way that definite numbers of the killed bacteria can be given at a dose. Two kinds of vaccines are made: Autogenous vaccines, prepared from cultures derived from the lesion of the patient, and stock vaccines, derived from artificially propagated cultures of particular kinds of bacteria, streptococci, pneumococci, etc. As different strains of the same organism vary in activity and virulence, better clinical results are had from autogenous vaccines. It can readily be seen that the variety of these is endless and that the technique is simple in comparison with that of making antitoxic serums. Vaccines were used widely during the past year, but the science is still in an experimental stage.

**SERVIA.** A constitutional monarchy in the south of Europe; one of the Balkan States. Capital, Belgrade.

**AREA, POPULATION, ETC.** Area, 18,649 square miles. Population (1900), 2,493,882; estimated, December 31, 1908, 2,853,659. Marriages (1909), 26,641; births, 110,226; deaths, 83,350. Belgrade had (1905) 77,116 inhabitants; Nish, 21,946; Kraguyevac, 15,596; Leskovac, 13,647. Elementary instruction is free, state-aided, and nominally compulsory. Attendance is poor; in 1900 only 16.99 per cent. of the total population could read and write. Schools (1907): 1292 primary, with 2373 teachers and 132,051 pupils; secondary, 20, with 327 and 6061; 4 normal, with 27 and 437; besides special and professional schools. Belgrade University had (1908-9) 902 students, of whom 46 were women.

The Greek-Orthodox is the state religion; entire religious liberty prevails.

**PRODUCTION.** Of the total population (1900), 2,093,947 were dependent on agriculture. Of the total area in 1905, 1,027,816 hectares were sown to crops, 25,815 were under gardens, 33,101 under vines, 136,940 under orchards, 59,855 under common and 95,709 under other pastures, 322,683 under meadows, 136,399 in worked and 166,612 in unworked forests; miscellaneous, 50,246; making a total of 2,055,000 hectares of productive area. The area, production (in metric quintals), and value of the main crops in 1906 are shown in the table at top of next column.

**Livestock (1905):** 969,953 cattle, 3,160,166 sheep, 174,363 horses, 908,108 swine, and 510,063 goats. Sericulture employed (1907) 9850 persons; export of cocoons, £30,538. Coal and

lignite output, (1907), 269,316 metric tons, valued at 3,045,621 dinars. Roads and railways are lacking for proper development of the mineral resources; though workable quantities exist of gold, copper, lead, zinc, antimony, silver, iron, quicksilver, asbestos, arsenic, chromium, graphite, gypsum, sulphur, marble, building stone, and oil shales. Milling, brewing, distilling, sugar refining, and iron working are carried on; and quantities of plum preserves are put up for export.

**COMMERCE, ETC.** Details of the special trade for 1909 and totals for three years are as follows (in thousands of dinars):

Articles	Imports	Exports
Textiles and raw materials.....	21,930	1,571
Foodstuffs, etc.....	15,557	83,068
Metals .....	13,662	5,237

Other merchandise.....	56	5
Total, 1909.....	73,535	92,982
Total, 1908.....	75,635	77,749
Total, 1907.....	70,583	81,491

Germany (1909) furnished imports valued at 28,858,000 dinars, and received exports valued at 15,595,000; Austria, 17,797,000 and 29,097,000; Great Britain, 7,585,000 and 142,000; Turkey, 4,856,000 and 21,974,000; France, 3,536,000 and 2,429,000; Italy, 2,345,000 and 3,047,000; Russia, 1,932,000 and 20,000; Rumania, 1,613,000 and 2,282,000; Belgium, 1,589,000 and 9,906,000.

Total railway mileage (1908), 420 (one main line and branches); highways, 3495; telegraphs, 2140 (wires, 6030); post-offices, 1493.

**FINANCE AND GOVERNMENT.** The unit of value is the dinar, worth 19.3 cents. Revenue and expenditure for three years have been as follows (1908 and 1909 estimates) in dinars:

	1907	1908	1909
Revenue.....	96,977,513	96,685,659	104,576,998
Expenditure ...	87,602,641	96,614,110	104,253,538

The budget for 1910 estimates the revenue at 115,277,745 dinars, derived as follows: Direct taxes, 32,235,000; monopolies, 30,010,000; customs, 12,300,000; state railways, 12,000,000; domains, 7,000,462; excise, 6,600,000; judiciary

taxes, 5,515,000; posts and telegraphs, 3,127,000; various, 1,951,283; extraordinary, 4,539,000. Expenditure, 115,072,843, distributed as follows: Debt, 33,196,850; war, 26,626,935; public works, 14,709,393; finance, 10,985,218; worship and instruction, 8,189,950; interior, 4,962,530; pensions and subventions, 4,860,249; agriculture and commerce, 3,761,944; justice, 2,445,029; foreign affairs, 2,435,364; civil list, 1,200,000; Skupschtina, 674,000; various, 699,081; extraordinary, 500,000. The debt stood, Jan. 1, 1910, at 536,720,000 dinars. An additional loan of 150,000,000 dinars nominal was realized in 1910.

**ARMY.** The army is recruited by compulsory service which begins at the age of 17 when youths are incorporated in the Landsturm to which they return after service with the active. Theoretically from the age of 21 there is 10 years of military service in the first line after which the soldier passes to the second and third. In practice, however, the army is maintained largely on a skeleton basis and service with the colors is limited to two years for the cavalry and artillery and 18 months in the other branches. In fact many have only 6 months' service with the colors. The skeleton organizations are maintained at an average strength of 24,000 officers and men, with an increase of about 10,000 in the summer when additional recruits are incorporated for training. The organization of the first line comprises five divisions with a strength of 125,000 men and capable of being increased to an army of 200,000 ready to take the field. The infantry comprise 30 2-battalion regiments and 2 battalions of frontier guards, armed with Mauser rifles. The militia when mobilized would supply 45 regiments for the first and second lines. During the year a school of musketry was established at Belgrade. In 1910 the war budget amounted to 26,626,935 dinars, an increase of 5,389,710 dinars over that of the previous year and represented 23 per cent. of the total budget. The increase was desired to augment the number of troops but especially the number of officers, and the effective strength of the army, and to provide additional equipment and facilities. Estimates vary on the actual fighting qualities of the army. Many of the troops are raw and inexperienced while some of the officers are poorly and inadequately trained.

**GOVERNMENT.** The executive authority rests in the king, acting through a council of eight responsible ministers. The Narodna-Skupschtina is the (unicameral) legislative body, with 160 deputies, popularly elected. The reigning sovereign, Peter I (Karageorgevich), was born July 11, 1844; elected June 15, 1903; married (1883) to Princess Zorka, of Montenegro (died 1890). Heir-apparent, Prince Alexander, born December 16, 1888. The council in 1910 (constituted October 24, 1909) was as follows: Premier, N. P. Pashich; Foreign affairs, Dr. M. G. Milovanovich; Finance, S. M. Protich; Worship and Instruction, S. M. Protich (ad int.); Justice, K. Timotievich; Commerce, Agriculture, etc., J. Prodanovich; Interior, J. Prodanovich (ad int.); Public Works, V. Voulovich; War, Col. J. Goikovich.

**SETON, ERNEST THOMPSON.** See BOY SCOUTS OF AMERICA.

**SEWARD, GEORGE FREDERICK.** American financier, died November 28, 1910. He was born in 1840 and was educated at Seward Institute and Union College. He entered the government

service and from 1861 to 1863 was Consul, and from 1863 to 1876 Consul-General at Shanghai, China. He was appointed Minister to Korea in 1869, but at his suggestion the sending of a mission to that country was deferred. He was Minister to China from 1876 to 1880, but on account of his refusal to undertake negotiations for a treaty restricting Chinese immigration, he was recalled. During his service in China he was active in checking piracy and suppressing riots. He was also engaged in diplomatic service in Korea and Siam. Returning to the United States he became engaged in the business of insurance and in 1887 was elected vice-president of the Fidelity and Casualty Company. In 1893 he was made president of this company. He was considered an authority on casualty insurance. Mr. Seward wrote much relating to his experiences in the East and on the diplomatic and commercial relations of the United States with China. He received decorations in recognition of his services from the Danish and French governments. He was president of the North China branch of the Royal Asiatic Society for two years. Among his published writings are *Chinese Immigration in its Social and Economic Aspects* and *Digest of System of Taxation of New York* (1902). He also made frequent addresses and contributions on economic and sociological topics.

**SEWAGE PURIFICATION.** INCREASING INTEREST IN SEWAGE PROBLEMS. Considering the vast amount of experimental and practical work already done in the field of sewage disposal the problems still awaiting a satisfactory solution are various and troublesome. These problems, however, relate to details of construction and operation and to costs rather than to sanitary efficiency. The number and difficulty of the problems attendant on sewage disposal are largely accounted for by the fact that sewage is a complex substance and that its treatment and final disposal is influenced not only by the complex character of the material itself, but also by the number and variety of local conditions which must be met and which are rarely the same in any two communities. The composition of sewage varies with the character of the city, whether purely residential, chiefly industrial, or mixed; and again with the character of the population and of the local industries; and still further from hour to hour and even from day to day. Then, too, the degree and character of treatment required varies largely with the kind and volume of water which is to receive the final effluent and the uses to which the water is put in relation to the health and comfort of the people adjacent to or dependent on the water. The real nature of the sewage disposal problem, with its many complexities, is being appreciated in these later days as never before. As a result, a rational view of the subject is becoming more common and there is less attempt than formerly to insist on hard and fast rules as to either methods which must be adopted or results which must be attained.

Two notable examples of the final prevalence of a rational view were afforded during the year, one in connection with the proposed disposal of the sewage of the Passaic River Valley municipalities into New York Bay and the other in connection with the proposed discharge of the sewage of Rochester, N. Y., into Lake Ontario. In each case a compromise was

effected which, while recognizing the necessity of partial purification, stopped far short of the extremes which had been urged by some of the champions of a high degree of purification or even the exclusion of the sewage from the waters in question.

**SEWAGE IN NEW YORK HARBOR.** In the case of New York Harbor the State of New York had brought suit for an injunction against the discharge of the sewage of the New Jersey communities into those waters, and the United States had sought and been granted intervention in the suit. The United States suit was withdrawn in 1910, on a stipulatory agreement between the two sides of the controversy. The Passaic Valley Sewerage Commission agreed to build more efficient sewage purification works than it had at first proposed. The amended plans provided for: (1) coarse screens; (2) grit chambers; (3) self-cleaning screens with meshes having a clear opening of not over 0.4-in; (4) sedimentation tanks so proportioned as to detain the sewage not less than  $1\frac{1}{2}$  hours at levels of average daily flow; (5) discharge of the final effluent into at least a 40-foot depth of water through at least 150 separate outlets, so exposed as to give a sewage disposal area of  $3\frac{1}{2}$  acres or more, the discharge to be in a horizontal rather than an upward direction. Furthermore, the works must be so designed, constructed, and operated as to produce no visible suspended particles of sewage in the bay; no deposits objectionable to the Secretary of War; no odors due to putrefaction; a practical absence of grease or color on the surface of the bay; no injury to public health, nor to property of the United States located in or on the harbor; nor may the sewage effluent so reduce the dissolved oxygen in the waters of the harbor as to interfere with major fish life. It was expected that New York State would follow the United States in withdrawing its suit, but this had not been done up to the close of the year.

The Metropolitan Sewerage Commission of New York, which has made extensive technical studies of the existing and prospective pollution of New York Harbor, declared the compromise provisions just outlined insufficient to protect New York City and advised the city to petition for the right to intervene in the suit. Such a petition was filed in the United States Supreme Court, but was promptly denied.

**THE SEWAGE QUESTION IN ROCHESTER, N. Y.** At Rochester, N. Y., the authorities proposed to divert the untreated sewage of the city from the Genesee River to Lake Ontario, with coarse screening and a short period of sedimentation before final discharge. The local press made strong protests and appeared to demand a high degree of purification. In due course the proposed plans were submitted to the State Department of Health for approval. The Department supplemented the advice of its own chief engineer with that of three outside engineers of national standing. The consensus of opinion was a virtual approval of the plans submitted by the city, which had been based on thorough-going engineering studies. The State Department of Health required some relatively slight changes in the plan, and then gave its approval, with the reserved power of requiring further changes should experience indicate that they are necessary. The Rochester case is notable for the recognition given to the principle that under proper circumstances sew-

age disposal by dilution, or in water is as proper as disposal on land.

**VARIOUS EXPERIMENTS.** The experiments in sewage purification begun by the Massachusetts State Board of Health in 1887 are still being continued. They were revived and summarized in considerable detail in the annual reports of the Board for 1908 and 1909, appearing first in pamphlet form in 1910. Likewise the sewage experiments begun considerably later at the Massachusetts Institute of Technology, Boston, Mass., are still in progress, latterly with a new equipment. A sewage experiment station has recently been established by the Sanitary District of Chicago, to help solve future problems in connection with the Chicago Drainage Canal and territory not yet tributary to the canal. During 1910 a report on sewage experiments made in 1909 at Gloversville, N. Y., was published, and a plant carrying out the conclusions of the report was put under construction. The plant will deal with domestic sewage of Gloversville combined with the industrial wastes of some two dozen tanneries. Considerable portions of the solids in the tannery wastes, however, are removed by sedimentation at the tanneries before the wastes enter the city sewerage system. The Gloversville plant will include screens, primary settling tanks, sprinkling filters, secondary settling tanks and sand filters, in the order named. The elaborate character of these works is due partly to the sort of sewage to be dealt with but largely to the very small summer flow of the stream into which the final effluent will be discharged, thus affording a marked contrast with the high degree of dilution afforded Rochester by Lake Ontario.

**THE SEPTIC TANK.** The Imhoff sewage clarification tank, a modification of the Travis hydrolytic tank, which in turn is based on the Cameron septic tank, is being used extensively in the Essen district of Germany, and has been adopted but not yet put in operation by the cities of Batavia, N. Y., and Atlanta, Ga. The aim of the septic tank is to retain the sludge or solid matters of the sewage for reduction to liquids and gases by anaërobic bacteria. To effect better control of the process than could be given by the simple rectangular septic tank, Travis, of Hampton, England, so modified the septic tank as to arrest the solid matters in one compartment and let them fall into a lower compartment for a less undisturbed and longer period of digestion than was offered by the septic tank. The sewage was so divided as to flow through both compartments, but at a lesser rate in the lower or digesting tank than in the upper or arresting tank. Imhoff uses a circular instead of a rectangular tank, and permits the sewage to flow through the upper or arresting compartment, only. The lower compartment is reserved exclusively for digesting the solids that fall to it from above, and the openings between the two are so arranged that the rising gases cannot carry solid particles into the upper compartment. It is reported that the sludge from the Imhoff tank is less offensive than that from either the Travis tank or the ordinary septic tank and that its final disposal is more readily accomplished, since after draining it resembles rich garden soil in texture. For detail of the Passaic Valley compromise, the Rochester controversy and its settlement, and the principles, design and practical operation of the Imhoff tank, see *Engineering News*, New York,

for May 12, August 11 and December 1, 1910, respectively. Kinnicut, Winslow and Pratt's *Sewage Disposal* (New York, 1910), is a notable contribution to the American literature of the subject.

**SEWERAGE.** The general principles and practice of sewerage design and construction underwent no significant change in 1910. The increasing use of concrete for sewerage conduits and tanks is giving rise to important questions as to the disintegrating effect of sewage upon concrete but no large body of conclusive evidence on the subject has yet been published. A revised edition of Folwell's *Sewerage* (New York, 1910) has appeared.

**SHAKESPEAREANA.** See **LITERATURE, ENGLISH AND AMERICAN, Essays and Literary Criticism.**

**SHARP, WILLIAM.** See **LITERATURE, ENGLISH AND AMERICAN, Biography.**

**SHARPE, RICHARD BOWDLER.** An English zoölogist, died January, 1910. He was born in London in 1847 and was graduated in Peterborough and Loughborough grammar schools. After having filled various capacities in publishing houses, he was appointed first librarian of the Zoölogical Society of London, in 1867, serving until 1872. In the latter year he was appointed senior assistant in the department of zoölogy in the British Museum. Here he remained until 1895, when he became assistant keeper of the sub-department of vertebrata in the British Museum. He was one of the best known of modern ornithologists, and among his published works are the following: *Catalogue of Birds in the British Museum* (27 vols.);

*Monograph of Alcedinidæ Hirundinidæ and Paradisidæ.* He was the editor of Allen's *Naturalists' Library*. In 1905 he was president of the fourth International Ornithological Congress.

**SHAW, CHARLES HUGH.** American botanist and educator, died August 8, 1910. He was born at Delaware, O., in 1875 and graduated from Ohio Wesleyan University in 1897. From 1895 to 1897 he was instructor of botany in that institution and from 1898 to 1903, professor of botany at Temple University. In 1900-02 he was lecturer at Woods Hole. He was the author of several works on botanical subjects.

**SHIPBUILDING.** Lloyd's Returns of Shipbuilding for 1910 gave the total merchant shipping launched during the year throughout the world as 1,975,853 tons, exclusive of warships and vessels of less than 100 tons. Of this Great Britain and Ireland were responsible for 58½ per cent.; the United States, 17 per cent., mostly for lake and inland navigation; Germany 8.15 per cent.; France, 4.13 per cent.; Holland 3.63 per cent, and still smaller percentages for other countries. The 1910 figures show substantial gains for most of the nations represented, that of France amounting to 91½ per cent.; Germany nearly 24 per cent., Holland 20 per cent., the United States, excluding river and harbor tonnage, 39 per cent., and the United Kingdom 15.13 per cent. The figures are given in detail in the accompanying tables.

During the year eight large steamers of 10,000 tons or over were constructed in British yards. These are given in the table on the following page.

For another year Messrs. Harland and Wolff of Belfast have the record for the construction of the largest tonnage launched in one year in the United Kingdom. Their total was 115,861 gross tons put into the water during 1910 as compared with 29,708 tons in 1908. The 1910 record of the Belfast shipbuilding firm has only been exceeded once by any single firm, which was in 1906, when Messrs. Swan, Hunter and Wigham Richardson launched from their ship-

yards a gross tonnage of 118,639 including in this amount the Cunard liner *Mauretania*.

**LAUNCH OF THE OLYMPIC.** On October 20 there was launched at Belfast from the shipbuilding yards of Harland and Wolff the *Olympic*, the world's greatest steamship. The new vessel is equipped with combined turbine and reciprocating machinery which had proved so successful in the *Laurentic*, a smaller ship also of the White Star Line. The *Olympic* is 888½ feet in length, 92½ feet in breadth overall, 97 feet breadth over boat deck, 105½ feet in height from bottom of keel to top of captain's house or 175 feet to the top of the funnels, has a maxi-

mum draft of 37½ feet and about 60,000 tons displacement. It is but natural to compare this vessel with the *Mauretania*, the next largest steamship and one which the *Olympic* closely resembles. The Cunard liner has a length of 790 feet and a displacement of about 45,000 tons at the same draft. On account of the huge size the launching of the *Olympic* presented many unique engineering features, and the launching weight of the vessel, about 27,000 tons, was the record weight ever transferred from land to water. A system of hydraulic triggers was arranged to hold the ship on the way and by the mere opening of a valve these were released and the ship was launched, the entire operation being executed with great success. It is quite obvious that in all the structural parts and machinery great masses of metal were involved and castings, beams, plates, propellers, shafting and other elements all reaching extraordinary size

\* Engines by Wallsend Slipway and Engineering Co.

and dimensions. The engines were designed to develop 45,000 horse-power which will maintain a speed of 21 knots. The two reciprocating engines drive the wing propellers, while the exhaust steam at lower pressure passes into a low pressure turbine, this arrangement having been found most economical and efficient. The *Olympic* was designed to furnish the maximum comfort for 2500 passengers and make the transatlantic trip at moderate speed. The crew numbers 860.

At the end of the year such progress had been made with the construction of the *Olympic* that the official announcement was made that the ship would leave Southampton and Cherbourg on her maiden voyage to New York on June 14. This would give less than eight calendar months for the completion of the ship from the time of her launching on October 20 and indicates much greater speed than was shown in the case of the *Lusitania* and *Mauritania* which required twelve months fitting out after they had been put overboard.

After the launch of the *Olympic* the most important event was the commencement of work on the *Europa* a new liner of even greater dimensions for the Hamburg-American Line for its transatlantic service. This new vessel whose keel was laid during the year is to be 900 feet in length, 96 feet beam, with a tonnage of 50,000. It will have an extreme displacement of between 60,000 and 70,000 tons and will have nine decks above the water line. The *Europa* is designed to accommodate without crowding 4250 passengers or more persons than the three largest hotels in New York combined. Comfort and convenience for those making the ocean voyage rather than extreme speed are the objects aimed at by the designers of the ship.

UNITED STATES SHIPBUILDING. The Commissioner of Navigation reported 1196 sail and steam vessels of 334,900 gross tons built in the United States and officially numbered during the year ended December 31, 1910, as shown in table on page 660.

SHIPBUILDING ON THE GREAT LAKES. During the year 1910, there were 51 vessels of all classes built on the Great Lakes, an increase of 12 over the year 1909; and as to size and carrying capacity, the output in 1910 was greater by 24,000 tons than in 1909. There were 20 steamers of more than 5000 tons each built, of which the *William B. Palmer*, 7600 tons, is the largest; and the total cargo carrying capacity of this group amounts to 194,500 tons. In the design of several of these great bulk freight

There were 345 unrigged vessels of 55,840 gross tons numbered during the same period.

carriers, the longitudinal system of framing is adopted.

On the Canadian shores of the Lakes, the largest vessel of the past year was launched at Collingwood, Ontario, to carry coal, ore and grain in bulk. She is 525 feet long, 56 feet beam and 31 feet in depth, and can transport 350,000 bushels of grain in her hold. A triple expansion reciprocating engine of 2400 horsepower driving a single screw was expected to give the ship a speed of 13 miles an hour loaded. As is the custom on cargo ships on the Great Lakes, a luxurious suite of rooms was fitted up for the occupancy of the owner and his guests.

**GREAT BRITAIN.** To the British merchant ships of 1910 only five were fitted exclusively with turbines. Two others had reciprocating engines on wing shafts and a low-pressure turbine using the exhaust from them on a centre shaft.

**GERMANY.** The total shipbuilding output in Germany during 1910, as reported by Lloyds, was 159,393 tons—an increase of about 31,000 tons as compared with 1909, but at the same time the total was only half what it was in 1906. The largest ship completed by Germany in 1910 was of 8000 tons, and there were eight others exceeding 5000 tons. No large sailing ship was built. The warship work was only about half what it was in the two years preceding.

**FRANCE.** The year 1910 was remarkable so far as France was concerned in the construction of the largest ship yet built in that country, the trans-atlantic liner *France* of about 23,000 tons, launched at St. Nazaire; she is to be fitted with Parsons turbines. From the Seine yard there was launched the *Sant' Anna*, of 9350 tons. The other vessels were of less than 5000 tons, and the total made up 80,571 tons, which was nearly double the total in 1909, but 2700 tons less than in 1908. As regards warships, there was only a total of 24,036 tons, which is only one-fourth of the tonnage of the previous year, but compares favorably with the earlier years of the century.

**HOLLAND.** The total tonnage credited to Holland (70,945 tons) in 1910, exceeded by nearly 12,000 tons the figures for 1909. This total does not include vessels known to be exclusively intended for river navigation. The tonnage of barges, lighters, and other river vessels launched during 1910 amounts to about 15,000 tons. Three steamers of 5000 tons and upwards were launched, the largest being the *Princess Juliana*, 8055 tons, built at Amsterdam.

**NORWAY.** The output for 1910 in Norway amounted to 36,931 tons. This was an increase of about 8000 tons on the 1909 figures, but is a much smaller total than that returned for several previous years. The figures include only two vessels of over 1500 tons, the largest being of 1701 tons.

**JAPAN.** The figures for Japan (30,215 tons) continued to show a decreasing output, which is 22,000 tons less than that of 1909. Included are two steamers of about 6000 tons each. The warship output was, however, much higher than in the two years preceding.

The only other countries with an output of over 20,000 tons were the British Colonies (26,343 tons) and Italy (23,019 tons). The total for the British Colonies included one steamer of about 6500 tons, built at Collingwood, Ont., already mentioned. Among the vessels launched in Italy were four steamers capable of a speed of 22 knots, two of which were fitted with turbines. The tonnage of Italian warships launched (19,374 tons) was above the average.

**SAILING VESSELS.** The largest sailing vessel in the world was completed at Bordeaux for a firm of shipowners in Rouen, whence she was to sail for India and Australia. She is 427 feet long, 56 feet beam and is confidently expected to be capable of making 17 knots speed under sail alone. An auxiliary gas engine is installed, however, that will propel her at 11 knots speed alone. A notable and unusual feature of the ship is the accommodation provided for a limited number of passengers, as it is said that a demand exists for sailing trips to the far East; and, as an experiment, the owners have furnished the cabins in a comfortable and attractive manner.

For Warship Construction see **NAVAL PROGRESS**.

**SHIPPING.** See paragraphs on subject in articles on countries and on States of the United States.

**SHIPPING.** The table at top of page 661 gives the number and net gross tonnage of steam and sailing vessels of over 100 tons of the several countries of the world, as recorded in Lloyd's register for 1910-11.

**SHIPPING SUBSIDIES.** Nearly every important country grants some kind of bounty or subsidy to encourage its shipping or shipbuilding industry. Most subsidies are designed to encourage both industries though most of them apply directly to the shipping industry and indirectly stimulate shipbuilding. England, France, Germany, Italy, Russia, Austria, Norway, Holland, Spain, Portugal, Brazil, Canada, Japan, Australia and other British Colonies pay mail subsidies, though in some cases the amounts are very slightly in excess of established postal rates or mail pay. A second kind of subsidies are known as shipping or navigation bounties for the encouragement of the merchant marine. France, Japan, Italy, Spain and Austria pay these. Third are the naval, admiralty, naval reserve, or armament subventions paid on condition that vessels have a certain minimum speed and required structural

features and be available for naval purposes in war time. England and France have developed this class of subsidies in excess of other nations. A fourth class includes the construction or shipbuilding subsidies paid at a certain rate per ton on home built vessels. These are paid by France, Spain, Italy, Japan and Austria. A similar purpose is served in Germany by free importation of and low freight rates on all materials used in shipbuilding. Other encouragements are discriminating duties in favor of goods carried in national vessels; favorable harbor and canal tolls; and in Germany low railway rates on goods for export in German vessels.

The annual subsidies of Great Britain amount to \$5,800,000; of British colonies, \$3,800,000; of Germany, \$2,400,000; of Australia, \$3,000,000; of France, \$13,000,000; Italy, \$3,800,000; Spain, \$3,200,000; Japan \$4,500,000; Russia, \$2,000,000; Norway, \$1,200,000, and Holland, \$900,000. These are approximately the amounts paid in 1908; the totals vary from year to year owing to variations in the different items.

**AMERICAN.** For many years bills providing for general ship subsidies have been before Congress. These measures usually provide for an extension of the existing mail subsidy established in 1891, and the inauguration of subsidies on merchant vessels and on deep-sea fishing vessels. Under the act of 1891, which grants much higher rates for carrying mail to American than to foreign vessels, the total subsidies equaled \$1,189,000 in 1908. Of this 62 per cent. was paid to 20-knot vessels of the American Line to Southampton; 17 per cent. to 16 to 18 knot vessels to Cuba and Mexico; nearly 10 per cent. each to

12 to 14 knot vessels to Jamaica and Venezuela, and \$37,962 to the Oceanic running to Tahiti. It was proposed in legislation before Congress in 1910 to increase and diversify the subsidies as a means of developing American merchant marine and encouraging American shipbuilding.

**ARGUMENTS FOR.** The principal ground on which this proposal is based is the decline of American shipping since 1860. The total documented merchant marine of the United States decreased from 5,539,800 tons in 1861 to 4,068,000 tons in 1880; it thereafter rose to 5,164,800 tons in 1900, and to 7,508,082 tons in 1910. But the tonnage registered in the foreign trade was 2,496,894 in 1861; 1,352,800 in 1880; 826,700 in 1900; 954,500 in 1905, and 782,515 in 1910. Whereas in 1861 we carried practically all our own trade and a large proportion of that of the rest of the world, in the last few years American ships have carried less than 10 per cent. of our foreign trade.

In this connection the growing importance of South American and Oriental trade is emphasized. The United States enjoys a relatively small proportion of South American trade, in spite of our proximity and political advantages. It is not unusual for an entire year to pass without a single American steamship entering the ports of Buenos Ayres or Rio Janeiro. It is argued that much American mail and trade are carried first to Europe in subsidized vessels and then to South America in other subsidized vessels. This for all practical purposes gives European merchants the advantage.

Then it is contended that subsidies are a logical part of the protectionist policy to which the

country is pledged. American workmen demand higher wages; and, after vessels are built American seamen require better pay and conditions than do foreigners. The more zealous protectionists declare that it would be un-American and unpatriotic to allow foreign built vessels, though owned by Americans, to sail under the American flag. They contend, moreover, that this would not overcome the effects of foreign subsidies. Similarly they declare the plan of discriminating duties in indirect trade to be not feasible since this would require the abrogation of more than a score of trade treaties and would be followed by retaliatory duties. The infantry industry argument is used; shipbuilding it is said is our only unfostered industry, and to develop it will benefit first one section of the country and then by diffusion all sections.

The extremity to which the protagonists of subsidies go is illustrated by the argument that we must build up a merchant marine for our navy to protect. That is, we are spending millions on a navy that is of little use until American merchant vessels frequent the high seas. Very similar is the argument that we must create shipping to use the Panama Canal; the advantages of this great undertaking can be secured to the United States only when we have many vessels passing through it.

Much sounder are the arguments based on the probable effects of war. It is held that a war involving those nations upon which we now depend to carry our goods would prove disastrous to our foreign commerce. Again it is pointed out that foreign countries have built up an auxiliary navy and transports available in war by means of subsidies; whereas the United States required foreign transports when its fleet toured the world. It is argued that our new navy would prove powerless in war without the support of auxiliary cruisers and transports.

**ARGUMENTS AGAINST.** Those contending against the proposed measure admit the great decline in our foreign shipping and the fact that we pay foreigners about \$200,000,000 per year for carrying our goods. But they find in this no cause for alarm, since this indicates that American labor and capital have found more profitable employment in the development of the rich internal resources of the country, and that foreign vessels carry our trade more cheaply than we can afford to do it ourselves. They hold that as it becomes profitable to do so American capital will seek investment in shipping; that there is at present no lack of foreign vessels to carry our goods; and that therefore it is uneconomical to divert our energies to the relatively less productive lines of shipping and shipbuilding. With this goes the contention that a subsidy is class legislation—the taxation of all for the benefit of a few and that it is not desirable, at a time when the country is demanding a radical reduction of tariff duties, to create a new class of favored interests.

It is said that the best means of developing our South American trade is to establish branch banks in principal ports; to send out well-equipped agents; and to systematically cultivate the interests of foreign merchants.

Many feel that the first step of all should be to open American registration to foreign built but American owned vessels. This would at once increase our shipping and make available transports for use in war. At the same time shipbuilding should be encouraged by al-

lowing the free importation of all materials intended for use in the construction of vessels. Then there is a plan for discriminating duties, whereby goods brought in American vessels are taxed at a lower per cent. than those carried in foreign vessels. This is sometimes modified so as to apply only to indirect trade. By this device goods carried in American vessels or in vessels of the country exporting the goods would pay lower duties than those carried in the vessels of a third nation. Those advocating discriminating duties in preference to subsidies hold that the resulting disturbance to our trade treaties would be slight. At any rate there is no guarantee that American subsidies will not be met by higher subsidies abroad or even by higher tariff duties.

Then the plan is said to have been futile in those countries that have tried it. Most foreign subsidies have been granted the mail steam-ships and for short periods of time. Great Britain pays no subsidies for the carrying of goods and yet she has more than half the world's tonnage. France has paid larger subsidies than any other nation and yet has a relatively small and inefficient merchant marine.

**JAPAN.** Amendments to the Japanese laws for the encouragement of navigation and shipbuilding, became effective January 1, 1910. A general navigation subsidy is provided for all home-built steel steamships of at least 12 knots speed and not over 15 years old, and engaged on any four routes, the European, South American, North American and Australian. Subsidies one-half as great are granted to approved foreign-built vessels not more than five years old. The total cost of these navigation subsidies for 1910-11 was estimated at 7,260,000 yen (about \$3,600,000). The law for the encouragement of shipbuilding divides vessels into two general classes of four grades each according to size and speed with subsidies ranging from 11 yen to 22 yen per ton. The total construction in Japanese yards in 1908 was 137 vessels with a total tonnage of 246,764 tons.

**SHIRT-WAIST MAKERS' STRIKE.** See STRIKES.

**SHOEMAKER, JOHN DIETCH.** An American physician and educator, died October 11, 1910. He was born in Chambersburg, Pa., in 1852 and graduated from Dickinson College in 1872. He studied medicine at the Jefferson Medical College in 1874. From that year until 1886 he was demonstrator and lecturer on anatomy at the Jefferson Medical College and from 1886 until his death was professor of cutaneous diseases and of materia medica and therapeutics. He was a founder of the *Medical Bulletin* in 1879, of the *Medical Register* in 1887, and later was editor of the *Medical Times and Register*. He was a member of several American and foreign medical associations and was delegate to the ninth, tenth and eleventh International Medical congresses. From 1901 to the time of his death he was president of the Board of Charities and Corrections for the city and county of Philadelphia. He was also surgeon-general to the national guard of the State. He wrote extensively on medical subjects and among his published works are the following: *Poisons and Antidotes*; *Treatise on Materia Medica and Therapeutics*; and *A Practical Treatise on Diseases of the Skin*.

**SHOES.** See BOOTS AND SHOES.

**SHOOTING.** More interest was shown in

shooting matches by the soldiery of the United States in 1910 than ever before with the result that unusually high scores were made. In the matches held under the auspices of the National Rifle Association of America the individual championship was won by Corporal George Farnham of the United States Marine Corps, who scored a total of 547. Other events and winners were: Wimbledon Cup (100 yards), Captain G. H. Emerson, Ohio National Guard; Leach Cup (800, 900 and 1000 yards, seven shots at each distance), Lieutenant C. L. Sturdevant, Engineer Corps, U. S. A.; Long Range Tyro Match (1000 yards), Sergeant Scott Clark, Indiana National Guard; President's Match, Sergeant W. A. Fragner, United States Marine Corps; Press Championship of the United States, A. E. Gaartz, Milwaukee Sentinel; Individual Rapid Fire Match, D. A. Dixon, U. S. A.; Regimental Team Championship, Sixth Massachusetts Infantry; Company Team Championship, Fourth Company, United States Naval Academy; Revolver Team Championship, First Squad Cavalry, Colorado National Guard.

The eleventh annual tournament of the United States Revolver Association was held September 18-25 in twenty-two different places. The revolver championship at 50 yards was won by J. R. Hicks of New York. Other events and winners were: Military Revolver Championship, W. H. Whigam of Chicago; Pistol Championship, J. A. Dietz of New York; Military Record Match, Samuel Peterson of Chicago; Military Revolver Team Match, First Cavalry, Illinois National Guard; Grand Aggregate Medal, A. P. Lane of New York.

An international small bore match between the United States, Great Britain and Australia, each team consisting of 50 men, was won by the United States with a score of 24,539. Great Britain finished second with 24,439 and Australia last with 23,883. The most noteworthy performances of the year in trap shooting were those of J. R. Graham, an amateur, who made 417 straight targets, Harry S. Wallis, who ran 138 straight from the 20-yard line and W. R. Crosby who scored 390 out of a possible 400.

The professional champion of the year was Fred Bills and the amateur J. R. Graham. In a match between teams from the United States and Canada, the United States was the victor by a score of 212 to 193.

**SHORE, R.** See **LITERATURE, ENGLISH AND AMERICAN, Travel and Description.**

**SHORT BALLOT.** A steady growth of public opinion in behalf of the short ballot idea is to be noted. The New York Short Ballot Organization did good work in preparing a resolution and getting it introduced at Albany. The resolution called for a constitutional amendment, taking all the minor officers off the ballot and making them appointive by the governor. The measure secured considerable publicity throughout the State, although it was defeated in committee. Further work in New York State on this measure is probably impossible on account of the nearness of the Constitutional Convention of 1916. The committee of the New York State Legislature, which made a journey through the West to study direct primaries, reported against direct primaries and said that the short ballot was the real remedy for our political ills. This made the short ballot somewhat conspicuous in direct primary discussions in New York State, and it was always referred

to by Governor Hughes in his speeches. Outside of New York and New Jersey, where Governor Hughes and Governor Fort had much to say regarding the short ballot, the subject has come up in politics in Ohio, where Mr. Garfield, who tried to obtain the Republican nomination for governor, made the short ballot one feature of his progressive platform. The supporters of Governor Vessey, who was a candidate for reelection in South Dakota, used short ballot arguments to oppose a local plan of their opponents for making the warden of the State prison and the keeper of the State insane asylum and all other State officers elective by party vote. Ex-Governor Hay of Washington, running for reelection, made short ballot ideas part of his platform. The Keystone party in Pennsylvania put a short ballot plank in its platform. Generally speaking, the attitude of the public toward the short ballot continues to be cordial and receptive. In Pennsylvania a resolution to amend the constitution of the State so as to open the way for appointive elections (now elected by districts) has been introduced. It is the same amendment that was defeated in the November (1909) elections, under the impression that it was undermining democracy.

The first specific plank in the California Republican platform was a pledge to enact a short ballot law, and the State Central Committee has appointed a sub-committee on election laws, which is instructed among other things to prepare for presentation to the legislature, a bill for short ballot reform. This committee will present a county government bill, which will provide for the short ballot in counties, and doubtless also a bill providing for the easier adoption of the commission plan of government in cities. The general committee will, it is expected, present a somewhat radical bill greatly curtailing the ballot in State elections.

Involving as it does constitutional changes, there is very little more to report in the way of concrete accomplishment, although the adoption of the commission form of government represents one form of short ballot, and in this direction there has been a very substantial advance during the past year. Moreover, the agitation of the short ballot idea has brought about a more wide-spread consideration of the whole question of our governmental machinery, with the result of awakening the people to their duty and responsibility in the premises. Some idea of the need for a short ballot may be gathered from the statement that the ballot voted in South Dakota in November, 1910, was eight feet long.

**SIAM.** An independent kingdom in south-western Asia. Capital, Bangkok.

**AREA, POPULATION, ETC.** Approximate area, 200,000 square miles. Estimated population, 6,687,000, made up of Siamese, Chinese, Shans, Laos, Malays, Burmese, Cambodians, and (1909) about 1800 Europeans. Bangkok has 628,675 inhabitants. The official religion is Buddhism, and education is largely in the hands of the priests.

**PRODUCTION.** Owing to the debt-bondage system, which renders the inhabitants virtually a nation of serfs, the country has been but inadequately developed. The late king, however, issued decrees looking to the ultimate abolition of slavery, and improved conditions are confidently expected. Rice is the chief export, as well as the staple food of the people; and the acreage has been greatly increased by irrigation. In 1907-8, 795,855 tons were exported; in 1908-9, 918,367 tons. The first rice-mill was built in 1858, and the industry has grown until it now supports in all large and small mills to the number of 47. Pepper, sesame, cotton, tobacco, fruits and coffee are grown and cattle are raised in considerable numbers. Dense forests cover large northern areas, where the teak-cutting industry is carried on, mostly by British enterprise. The planting of rubber is encouraged. The mineral deposits, including gold, coal, iron, zinc, manganese, and antimony, are little worked. Tin alone is mined on a considerable scale; rubies and sapphires are exported. Quantities of fish are taken along the coasts.

**COMMERCE AND COMMUNICATIONS.** Trade is almost entirely in the hands of foreigners; the value of the sea-borne trade for three years is as follows:

	1907-8	1908-9	1909-10
Imports .....	£5,784,985	£5,781,219	£5,279,000
Exports .....	7,332,241	7,582,866	7,756,000

Rice export in 1907-8, £5,556,560; 1908-9, £5,975,162; 1909-10, £6,433,000. Teak exported in 1907-8, £981,513; 1908-9, £887,463; 1909-10, £527,000. The details of the sea-borne trade for 1908-9 are given below in thousands of pounds sterling:

Imports.		Exports.	
Cottons.....	1,035	Rice.....	5,975
Treasure.....	752	Teak.....	887
Iron, etc.....	336	Other woods.....	22
Silks.....	292	Fish, etc.....	170
Gunny sacks.....	222	Hides.....	83
Sugar.....	193	Treasure.....	53
Kerosene.....	149	Pepper.....	41
Opium.....	134	Salt.....	33
Cotton Yarn.....	114	Silks.....	29
Hardware.....	89	Silk, raw.....	16
		Sticklac.....	10
Various.....	2,466	Various.....	263
Total.....	5,781	Total.....	7,582

The imports are derived, in order of value, from Singapore, Hongkong, Great Britain, China, Germany, and India. The exports, in the same order, are destined to Singapore, Hongkong, India, Great Britain, and the Netherlands. The imports from Burma in 1907-8 (tobacco, chillies, pepper, cottons, silk, and clothing) amounted to £175,634; and the exports thereto (teak, kerosene, soap, cloth, etc.) to £218,507. A considerable traffic is carried on by hawkers across the northern frontiers with the British Shan states and Yunnan. In 1909, 830 vessels, of 774,424 tons, entered, and 832, of 776,421 tons, cleared. The merchant marine (1908) included 18 steamers, of 2120, and 50 sail and junks, of 4626 aggregate tons.

Length of all railways (1910) about 650 miles, largely state-owned. The state line under construction to the Burma-Siam frontier has reached Meh Puak; work on it is in abeyance, in consequence of the concentration of energies

upon the extension into the Malay Peninsula which will ultimately connect Bangkok with Singapore. There are few roads, properly so-called. Telegraph lines, 3000 miles; wires, 6200. Post-offices (1909), 102.

**FINANCE.** The monetary unit is the tical, worth about 36 cents, but fluctuating with the price of silver. Measures for the adoption of a gold standard have been enacted, whereby the value of the tical will be fixed at 37.43461 cents. Budget estimates for three years are as follows in ticals:

	1907-8	1908-9	1909-10
Revenue.....	50,700,805	59,200,717	64,250,000a
Expenditure ...	56,261,524	66,594,611	73,673,898b

a Derived as follows: opium, spirits, and gambling farms, 26,849,290 ticals; land and fisheries, 8,831,960; capitation tax, 6,927,168; customs, 6,032,900; railroads, 4,220,000; octrois, 1,713,509; forests, 1,668,600; posts and telegraphs, 1,176,980; mines, 770,300; other, 7,236,282. b Disbursed as follows: war, 14,260,048; interior, 11,169,984; civil list, 9,661,600; railroads, 7,699,210; finance, 6,795,823; administration, 4,255,276; public works, 3,941,369; justice, 2,865,119; land and mines, 2,520,968; irrigation, 1,725,246; worship and instruction, 1,308,603; foreign affairs, 936,286; other, 6,534,366. Public debt (1910), £4,000,000; paper currency, March 31, 1909, 17,988,185 ticals.

**NAVY.** The effective navy included (1910) one cruiser of 2800 tons; 4 gunboats of from 500 to 700 tons each; 3 torpedo boats, 90 tons each; one torpedo-boat destroyer, 380 tons; besides despatch boats, transports, etc., and 65 small craft in the river and coast service. Personnel, 4500 to 5000 officers and men.

**ARMY.** The standing or active army consists of about 6000 men organized on a peace basis into 10 divisions and having 80 pieces of artillery. Each division consists of 2 regiments of infantry, 1 regiment (2 squadrons) of cavalry or mounted chasseurs, 1 regiment of artillery, 1 company of engineers, 1 company of train, and an ambulance company. Military service is required by a law of 1905 and there is general training of male inhabitants for the militia. The armament is modern and consists of Mauser and Mannlicher rifles.

**GOVERNMENT.** Siam is an absolute monarchy, nominally hereditary; in fact, each sovereign appoints his successor. The king is the executive, assisted by a council of ministers and a European adviser. There is a legislative council, composed of the ministers, and other members appointed by the king; many foreigners are employed in the various state departments. King Paramindr Maha Chulalongkorn, who died October 23, 1910, was the most enlightened monarch and the author of many reforms. He was succeeded by his son, Maha Vajiravudh, born January 1, 1881, educated at the Sandhurst Military School and at Oxford, and possessed of many of his late father's Western ideals.

**SIBERIAN SURVEYS.** See **EXPLOATION; ASIA.**

**SICHEL, W. S.** See **LITERATURE, ENGLISH AND AMERICAN, Biography.**

**SIERRA LEONE.** A British colony and protectorate on the west coast of Africa. Area of the colony, 4000 square miles; of the protectorate, 30,000 (both estimates); population (1901), 76,655 and (estimate) 1,000,000 respec-

tively. The inhabitants of the colony are descendants of liberated Africans from all parts of the world; those of the protectorate, Limbas, Kurankos, Timinis, and Mendias. Capital and largest seaport, Freetown, with 37,280 inhabitants. There are mission schools. Palm oil, palm kernels, rice, rubber, kola nuts, ground nuts, coconuts, ginger, gum copal, benni seed, and hides are exported. Imports (1909), £978,807 (Great Britain, £708,409); exports, £981,466 (Great Britain, £256,223); revenue, £361,236; expenditure, £336,746. A railway (227 miles) from Freetown terminates at Baiima near the Liberian frontier. A telegraph line follows the railway. Governor (1910), vacant.

**SILK.** In their annual review of the raw silk market for 1910, Messrs. Chabrières, Morel & Co., of Lyons, France, stated that the year 1910 has confirmed the growing influence of American consumption on the one hand and of Asiatic production on the other upon the value of silk. The United States consume more than one-third of the world's crop and the Far East produces the two-thirds of same. These authorities further stated that the world's production for 1910 seemed to be smaller by 5 per cent. than that for 1909 and 1908.

The first reason for this diminution was that the French crop resulted shorter by about one-half; then the Italian crop has constantly decreased since 1907, and the crop reports from the Levant were no better. At the same time, a further increase in the production of the Far East, namely of Japan, was reported. So that, during the first months of the season and until the mishaps to the second and third crops of Japan became known, it was generally expected that the yellow silks of Europe would scarcely be up to the requirements, while there would be an excess of Asiatic silks, particularly if the American market did not revive.

Other authorities also estimated the yield of the crop at about 5 per cent. less than the preceding year. Further study showed that the damage to the French crop was much more serious than had been anticipated, the result being reduced by just one-half, amounting to only 340,000 kilos against 674,000 kilos in 1909; in Italy the deficit was limited to about 5 per cent., in Hungary to 12 per cent. The principal crops of Asia Minor, too, had suffered considerably, and in Brusa the difference was estimated at fully one-third, the crop yielding barely 460,000 kilos against 630,000 kilos the year before. The crop in China was estimated first at about 500,000 kilos less, Japan at slightly more than the preceding season. The following table prepared for the *American Silk Journal* gives the estimates of the different countries compared with the two years preceding:

**SILK CROP ESTIMATES:** *American Silk Journal*

	Kilos 1910	Kilos 1909	Kilos 1908
Europe .....	4,300,000	5,380,000	5,560,000
Levant .....	2,900,000	3,100,000	2,700,000
China .....	3,420,000	3,940,000	3,800,000
Canton .....	2,200,000	2,240,000	2,300,000
Japan .....	8,400,000	8,290,000	7,570,000
Bengal .....	280,000	240,000	250,000
	22,000,000	23,190,000	22,180,000

The tussah crop, which occurs later in the

fall of the year, had an abundant yield, and was estimated to be about 2 per cent. larger than in 1909.

These estimates were, however, considerably modified a little later in the year, as regards the two largest silk producing countries in the Far East. In Japan the third crop was much damaged by disastrous floods, which affected about twenty of the largest silk raising districts of the empire. The damage was said to amount to as much as 40 per cent. of the autumn crop in the inundated regions and caused the original estimate of the year's export to be reduced from 145,000 bales to 135,130 bales by the end of August. Later on this was further reduced to about 125,000 bales, while there was a similar reduction in China silk.

The raw silk market during the year 1910 was crossed by a long period of dullness which changed in September to an extraordinary demand for the Japanese product, which lasted until November. This was accompanied by considerable speculation, and a good business in silk piece goods for delivery in the spring of 1911 was expected. The Japanese crop of 1909-10 had proved to be the largest on record, but the crop of 1910-11 as we have seen would have exceeded this amount had it not been for a series of floods in the growing districts which involved serious damage to the cocoons. The first estimate for the Japanese crop of 1910-11 ranged from 140,000 bales to 150,000 bales but at the end of the year many authorities reduced these figures to 125,000 or 135,000 bales. The Italian raw silk crop was reported smaller than for the previous year, while the Canton and Shanghai silk crops were of fair size. At the end of the year 600,000 bales of Japanese silk had been exported to the United States while over 24,000 bales had found their way to Europe. Similar figures for 1909 for the exports between July and December were 50,000 bales to the United States and 27,500 bales to Europe. Canton silks were also in demand especially by the broad silk manufactures and prices were advanced during the closing months of the year.

Late in the summer the manufacturing situation began to improve and the outlook became brighter for a good spring season for silk fabrics of all kinds. The American mills, which for a long time past had been overcautious in their purchases, decided that the time looked ripe for replenishing their supply.

At the close of the year the raw silk market in the United States was in a strong position and many believed that it marked the beginning of a new era of prosperity to the silk trade here and abroad, and of higher values. In 1909 the world's production amounted to 24,000,000 kilograms of raw silk with a consumption of 25,500,000; in 1910 there was estimated a production of less than 22,000,000 kilograms with an increased consumption. Two-thirds of the supply of Japan silks at the end of 1910 had been disposed of and shipped. Stocks at Yokohama at the end of 1910 stood at barely more than one-half of what they were last year. As to Canton silks, the market was entirely bare of stocks.

At the end of the year the condition of finished goods in the American market had undergone a great change for the better and the situation of manufacturers was vastly improved, as a wise curtailment of production during the summer months had prevented any accumulation of new goods, and for desirable fabrics they were able

to name advances which the buyers are willing and ready to pay.

At the beginning of the year 1910 large stocks of raw silk were on hand at nearly all the primary markets. At Yokohama, Shanghai, Canton, Milan and in the hands of the New York City importers there was a large supply, but this was gradually reduced during the first four months of the year and by the first of May prices began to stiffen, especially for Japan's raw silk. Owing to the increased use of flowers, feathers, and straw braids and other materials the ribbon business during the year 1910 was much less extensive than for any previous years and values were thought to be never as low as during that year. At the end of the year importers looked for improvement as an increased use of ribbons by Paris milliners was anticipated. The business in silk piece goods was also unsatisfactory though heavy Messalines or dress satins, printed Foulards, warp printed Persians, Marquisettes and similar fabrics enjoyed good business. Manufactures of silk and cotton mixtures were in many lines taking the place of the cheaper grades of silk.

Silk importations in 1910 exceeded in quantity those of any earlier year, amounting in round terms to 25 million pounds, valued at 70 million dollars, and from this the mills of the United States were expected to turn out more than \$150,000,000 worth of finished products.

The estimate as to the value of the year's manufactures is based upon an actual total of 133 million dollars' output shown by the census of 1905, in which year the imports of raw silk amounted to but about 20 million pounds, against the 25 million pounds imported in 1910.

Silk importations and the activity of the industry utilizing the raw material have shown a steady and rapid growth since the beginning of this industry a half century ago. The total quantity of silk imported in 1860 was approximately a quarter of a million pounds, though the exact figures cannot now be determined since only values were stated at that time. The total value of the imports of that year was approximately  $1\frac{1}{4}$  million dollars. In 1870 the quantity of raw silk imported was, speaking in round terms, a half million pounds, valued at 3 million dollars; in 1880,  $2\frac{1}{2}$  million pounds, valued at 12 million dollars; in 1890, 6 million pounds, valued at  $19\frac{1}{2}$  million dollars; in 1900, 10 million pounds, valued at  $32\frac{1}{2}$  million dollars; and in 1910, about 25 million pounds, valued at 70 million dollars. The foregoing figures of quantity include both "raw silk in skeins reeled from the cocoon or re-reeled" and "silk waste," the imports of waste being less than 4 million pounds in 1910, against about 22 million pounds of silk as reeled from the cocoon.

Meantime the production of silk manufactures in the United States has grown from 12 million dollars' value as recorded by the census of 1870 to 41 million in 1880,  $87\frac{1}{4}$  million in 1890,  $107\frac{1}{4}$  million in 1900, and  $133\frac{1}{4}$  million in 1905, a rate of growth which, taken in conjunction with the known increase in importations of raw silk, seems to fully justify the expectation that the value of the products of the silk manufacturing establishments of the country will, in the census of 1910, show an aggregate of considerably more than 150 million dollars. The number of persons employed in the silk manufacturing industry has, according to census

figures, grown from 1743 in 1850 to 5435 in 1860, 6649 in 1870, 31,337 in 1880, 49,382 in 1890, 65,416 in 1900, and 79,601 in 1905. The wages paid in the industry, speaking in round terms, amounted to 1 million dollars in 1860, 2 million in 1870, 9 million in 1880, 18 million in 1890, 21 million in 1900, and 27 million in 1905; while the capital invested has increased from a half million dollars in 1850 to 3 million in 1860, 6 million in 1870, 19 million in 1880, 51 million in 1890, 81 million in 1900, and 110 million in 1905; the number of establishments having grown from 67 in 1850 to 624 in 1905.

The importations of silk manufactures show much less change than either imports of raw material or domestic production. The value of silk manufactures imported in 1850 was 18 million dollars; in 1860, 33 million; in 1870, 24 million; in 1880, 32 million; in 1890, 39 million; in 1900, 31 million; and in 1910, 33 million, these figures of importations of silk manufactures being in all cases those of the fiscal year, while those of raw silk imported are, in the more recent periods, those of calendar years, with the purpose of presenting the latest available data.

On the export side the figures are small. The largest exportation of silk manufactures of domestic production ever recorded was in the fiscal year 1910—only \$1,097,593, and of silk goods manufactured in foreign countries, \$186,515, thus indicating that practically all of the 200 million dollars' worth of silk goods produced and imported annually is consumed in the United States.

**SILVER.** The production of silver throughout the world in 1910 according to the preliminary estimates made by the Director of the United States Mint was 217,788,714 fine ounces as compared with 211,215,633 fine ounces in 1909. Of the countries producing silver, increases in production were shown in the United States, Canada, Mexico, and South America, while decreases were shown in Africa and several of the countries producing smaller quantities. The production of each country in 1909-10 is shown in the following table:

SILVER PRODUCTION OF THE WORLD

	Final 1909	Preliminary 1910
	<i>Fine ounces</i>	<i>Fine ounces</i>
United States .....	54,721,500	56,438,695
Canada .....	27,878,590	32,878,590

The production of silver in the United States as estimated by the Director of the Mint was in 1910 56,438,695 fine ounces as compared with a production of 54,721,500 fine ounces in 1909, an increase of 1,717,195 fine ounces. This increase is due chiefly to increased production of silver from dry and siliceous gold-silver ores, from lead ores, and to a smaller degree from zinc ores, as it was known that the production of copper, the ores of which supply nearly one-third of the silver output of the United States, was somewhat decreased during 1910. The production of both lead and zinc, however, increased in 1910. The average price of copper was slightly lower than in 1909, the average price of lead was increased and that of spelter remained the same. The rather remarkable decrease in both the quantity and price of copper and the increase in both the quantity and price of lead in 1910 were accompanied by an increase in both the quantity of silver produced and the average price of the metal. The silver mining industry was therefore prosperous in 1910. The value of the production is estimated at \$30,194,702 as compared with a value for the production of 1909 of \$28,455,200. The average price of silver in 1909 was 52 cents a fine ounce, while in 1910 the price rose to 53.5 cents a fine ounce.

With the decrease, since the bonanza days of the great Comstock and other silver mines, of production from ores essentially classed as silver ores and the serious decline in market price, the production of silver in the United States has shown a certain independence of its market price and has depended rather on the mining of gold, copper, lead, and mixed ores. With satisfactory prices for the base metals and decreasing costs for mining and smelting them on a large scale, and with the generally increasing gold production of recent years, silver production may therefore be expected to continue to increase in the United States, notwithstanding the growing production from Mexico and Canada and the higher tax imposed on silver by the Indian government. The large output in China and India, the growth of trade throughout the world and a tendency to a greater use of silver in the arts, as for example in photography, have sustained the price of the metal and held out hope for the immediate future. The table given at top of next column indicates the production of silver in the United States by States in 1909-10, according to the preliminary estimates made by the Director of the Mint.

According to estimates made by the United States Bureau of Statistics the imports of silver in 1910 were valued at \$29,599,000 for silver in foreign ore; \$12,703,000 for silver in foreign bullion; \$2,011,000 for silver in United States coin; and \$1,097,000 for silver in foreign coin. The total value of silver imported is therefore estimated at \$45,410,000 for 1910.

The exports during the same year were valued at \$350,000 for domestic ore; \$30,000 for silver in foreign ore; \$51,820,000 for silver in domestic bullion; \$3,100,000 for silver in foreign bullion; \$120,000 for silver in United States coin; and \$550,000 for silver in foreign coin. The total value of exports in 1910 is estimated therefore at \$55,970,000 or \$10,550,000 in excess of the value of the imports. The imports of silver in 1910 were chiefly in ore and bullion and came mainly from Mexico and Canada. The exports were almost wholly in ore and bullion and

went chiefly to the United Kingdom and in smaller amounts to Hongkong and France.

New York, cents per fine ounce; London, pence per standard ounce.

**SILVER.** See ATOMIC WEIGHTS.

**SIMMONS, JOSEPH EDWARD.** An American financier, died August 5, 1910. He was born in Troy, N. Y., in 1841 and in 1862 graduated from Williams College. After studying in the Albany Law School he was admitted to the bar in 1863. He practised law for four years in the upper part of New York State and then removed to New York City where he engaged in the banking and brokerage business. The business prospered and he was soon able to purchase a seat in the New York Stock Exchange. During the financial crisis of 1884 he was elected president of the New York Stock Exchange and was re-elected for the following year. He skillfully steered the Stock Exchange through the crisis of these years and then declined to serve another term. In 1888 he was elected president of the Fourth National Bank,

in which position he continued up to the time of his death. He was influential in guiding banks through the crises of 1893 and 1907. In the panic of the latter year he was among those bankers who stood firmly for the climination of Charles W. Morse from the banking field. In 1907 he was elected president of the New York Chamber of Commerce. Mr. Simmons was a conservative Democrat and took an active part in the campaign which led to the election of President Cleveland. The Democratic nomination for mayor was once offered to him, but he declined it in favor of Abram S. Hewitt. In 1907 he was appointed president of the Board of Water Supply, but resigned on account of the pressure of business. He was for ten years president of the Panama Railroad. Mr. Simmons was a director or trustee in many important financial companies. He was prominent as a Mason.

**SIPHON LOCKS.** See CONCRETE.

**SKARBINA, FRANZ.** A German painter, died May 18, 1910. He was born in 1849 in Berlin and studied in the Berlin Art Academy. From 1880 to 1893 he taught in the Berlin University School of Art, in which in 1888 he was made professor. In 1892 he was made a member of the Academy for the Advancement of the Art of Engraving and was a partner in the art printing firm of Teubner and Voigtland. Among his best known paintings are "Evening of Life," "Fishmarket in Blankenberg," "A Glimpse out of the Kaiser's Window," "Noon in Ostend," and "Villagers playing Cards." In 1905 a gold medal was awarded to him in Berlin for his engraving "The Imperial Palace in Berlin on a Winter Afternoon." He was a member of the Belgian Academy of Art in Antwerp.

**SKATING.** The international outdoor skating championships were held at Saranac Lake, N. Y., in February. Edmund Lamy made a brilliant showing capturing the 220-yard, the half-mile, the mile, and the three-mile races. The 220-yard hurdles were won by W. G. Finlayson. In the international indoor championships held at Pittsburg Lott Roe made a new American record by skating one and one-half miles in 4 minutes 10 seconds. Both the mile and the five-mile races went to Edmund Lamy, while the two-mile event was won by R. Wheeler. The national outdoor championships were held on Orange Lake, near Newburg, N. Y. Joseph Miller won the quarter-mile race, William Burkholder the half-mile, and William Kuehne the mile. At the national indoor championships held in Cleveland, Edmund Lamy won the quarter-mile and one and a half mile races, while Philip Kearney captured the mile event.

A Russian skater, Strunnikow, carried off the point trophy at the world's championships held in Helsingfors, Finland, in March, although he took first place in the 10,000-metres event only. Mathiesen of Norway won the 500-metre and 3500-metre races, and Johannsen of the same country captured the 5000-metre race. The championships of Europe were contested for at

Davos, Switzerland, and here Mathiesen established the new records of 44½ seconds for the 500-metre, 1 minute 31½ seconds for the 1000-metre, and 2 minutes 20½ seconds for the 1500-metre races.

**SLAVIC PHILOLOGY.** See PHILOLOGY.

**SLEEPING SICKNESS.** The study of this disease progressed steadily during 1910, and several new features of importance were brought to light. Both in Uganda and in German East Africa it is realized that control of the malady must be had before these territories will be fit for white settlement, and the respective governments are bending every energy toward stamping it out. Professor Steudel, of the German Colonial Office, made a thorough investigation of the spread of sleeping sickness. He reports that there are several foci in German East Africa: two on Lake Victoria—one in the district of Bukoba, containing 1000 cases, another in the district of Schirati, containing 800 to 1000 cases; and a third focus exists to the north of Lake Tanganyika, containing several thousand cases. This is the largest district, and to render it free from the disease will necessitate a great deal of work. Another very old focus is located in Togo. Here the malady runs a milder course, shows less tendency to spread, and is more amenable to arsenical treatment. A remarkable fact, according to Locke, is that the arsenical preparations appear to vary widely in their effect in different localities. While patients in Togo are easily influenced by arsenicals, those on the Congo and at Kamerun (Cameroon) are affected only with difficulty. A marked difference is also noted with regard to the susceptibility to arsenic poisoning by natives in different districts, all of which renders the problem of treatment by means of these preparations highly complex. Another fact of importance was brought out by Klein in German East Africa, namely, that the tsetse-fly (*Glossina palpalis*) can remain infectious for several months, or even longer. Sir David Bruce found that the period of infectivity might last seventy-five days instead of forty-eight hours, as was formerly believed. This discovery has somewhat vitiated the theory that populations removed from fly districts could be returned to their homes after a brief period, or that these areas can be repopulated by other healthy people. Still another circumstance which complicates the situation is that certain individuals, themselves showing no signs of sleeping sickness, can harbor trypanosomes in their blood and act as carriers.

Sanitary measures on a large scale are being carried out on the lines laid down by Robert Koch. All individuals affected are segregated in colonies, the flies and their breeding places are destroyed by cutting down brush and reeds, and in addition the destruction of crocodiles, which also harbor the trypanosomes in their blood, is being carried out. Natives are removed from the fly districts and compelled to reside in healthy places free from flies. In the ten German segregation stations in East Africa, 6167 patients have been continuously under the supervision of nine physicians and sixteen sanitary assistants, both ambulant and hospital treatment being instituted.

Evidence was brought forward that sleeping sickness is spread by another fly besides the

*Glossina palpalis* (tsetse-fly). In Northwest Rhodesia, a number of cases of sleeping sickness occurred among both whites and natives. In this district no *Glossina palpalis* has been found, and the nearest point at which the fly lives is 400 miles distant. The newly suspected insect is another species of tsetse-fly known as *Glossina morsitans*, which is found in regions much farther south than the *Glossina palpalis*, where the latter is unknown. If these observations prove correct, a considerable modification in the sanitary measures already undertaken will have to be made.

Those interested may consult the Bulletins of the Sleeping Sickness Bureau, London. The librarian of the Bureau, G. A. Thimm, has compiled a *Bibliography of Trypanosomiasis*, an index of published works on the subject. More than 2000 titles are included.

**SLOANE, W. M.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**SLOCUM, C. E.** See LITERATURE, ENGLISH AND AMERICAN, *History*.

**SMALL HOLDINGS.** See AGRICULTURE.

**SMALL HOLDINGS ACT.** See GREAT BRITAIN, *History*.

**SMALLPOX AND VACCINATION.** According to the public health reports of the Marine Hospital Service, smallpox was present during the winter and spring of 1909-10 in almost every State of the Union. The disease has been unusually prevalent in the United States during the last ten years. From 1901 to 1903 it was epidemic and 4658 deaths were recorded. It is estimated that at least one-tenth of the population, or eight to nine millions of people, were unvaccinated. These constitute fuel for the propagation of the disease. Variola varies in virulence in different places and at different times, from less than 1 per cent. mortality to over 30 per cent. During epidemics, it may assume a most virulent form at any time among the unvaccinated population. The United States has succeeded in stamping out smallpox in the Philippine Islands. Up to 1909, 3,515,000 vaccinations had been performed, without a single death or serious accident occurring. Whereas in the provinces of Cavite, Batangas, Cebu, Bataan, La Union, Rizal, and La Laguna, smallpox had caused more than 6000 deaths annually, since the completion of thorough vaccination not a single death has occurred. Schamberg cites other figures to illustrate the protective value of vaccination. While the deaths from smallpox among physicians (a class particularly well vaccinated) are but thirteen per million in England, the deaths among the general population are seventy-three per million. In scarlet fever, on the other hand, against which physicians have no special protection, the figures are reversed. Fifty-nine medical men per million die of scarlet fever, as against sixteen per million of the general population. It is a common observation that nurses and physicians, who are vaccinated and who are in constant attendance upon smallpox patients, rarely contract the disease, and still more rarely lose their lives.

Sandwith points out the cost of anti-vaccinationist agitation in England and contrasts the smallpox situation in that country with that of Germany. In Germany, no such views in regard to the liberty of the subject, as prevail in Great Britain, exist to interfere with the thorough compulsory vaccination of the people.

Consequently, the only provision necessary in Berlin for smallpox is a dozen beds in a general fever hospital. Near London, on the other hand, a number of hospitals, containing 2040 beds, have to be kept constantly ready for an epidemic. The capital outlay for this purpose amounts to \$2,500,000, and the annual expenditure to \$65,000. See VITAL STATISTICS.

**SMITH COLLEGE.** An institution for the higher education of women at Northampton, Mass., founded in 1875. In 1909-10 the number of students was 1618 and there were 124 members in the faculty. There were no notable gifts received during the year or noteworthy changes in the faculty. The productive funds of the college amounted in 1909-10 to \$1,280,000 and the annual income is about \$85,000. There are about 30,000 volumes in the college library. The President is Marion Le Roy Burton.

**SMITH, EDGAR MEAD.** An American publicist, died April 9, 1910. He was born at Islip, L. I., in 1826. At the age of 18 he began the study of law, but abandoned it for a mercantile career in New York City. About twenty years previous to his death he retired from business. He took an active part in the abolition movement and was for years a prominent figure in business and political circles in New York City.

**SMITH, GOLDWIN.** An Anglo-American publicist, died June 7, 1910. He was born at Reading, Berkshire, England, in 1823. His father was a physician and from him the son inherited considerable property. He was educated at Eton and at Magdalen College, Oxford, graduating from the latter institution in 1845. During his college career he gained several prizes and two scholarships. In 1847 he became a fellow of University College, Oxford, and in the same year was called to the bar at Lincoln's Inn, but never practised law. From 1858 to 1866 he was regius professor of modern history at Oxford. He visited the United States in 1864 and during the Civil War was an ardent supporter of the North. Previous to his visit he had written pamphlets entitled *Does the Bible Sanction Slavery?* and *On the Morality of the Emancipation Proclamation*. While in the United States he made a lecturing tour and on his return to England published *The Civil War in America*. In 1868 he resigned his post at Oxford for family reasons and removed to the United States. Cornell University was at that time in the process of being organized by Ezra Cornell and Andrew D. White and they secured the services of Goldwin Smith as lecturer on English and constitutional history. He remained in this position until 1871, when he removed to Toronto, Canada, which was his residence during the remainder of his life. He retained a non-resident professorship at Cornell. In Toronto he continued his work as author, critic, and historian, expressing clearly the convictions he had arrived at through serious thought and study. In politics he styled himself a moderate liberal and he was opposed to party expediency as a means by which political corruption obtained its ends. He was a firm believer in the expediency of a union between Canada and the United States and he worked earnestly to bring this about. This brought him some degree of unpopularity in Canada. In addition to his other writing, for more than a generation he contributed a weekly article to the *Farmer's Son* of Toronto under the pen name

"Bystander." He began newspaper work as a member of the staff of the London *Times* and he was for many years honorary president of the Canadian Press Association. Goldwin Smith in his later life was called the last of the great agnostics, and he contributed many articles on religious subjects to the New York *Sun*. He was active in educational associations and was vice-president of the Canadian Land Association. As a historian he threw much light on the relations between England and Ireland, claiming that the contest was of historical origin and primarily a struggle on the part of the Irish race to reacquire the ownership of their soil. As professor of history at Oxford he developed his philosophy of history, combating the view that history is governed by necessary law; claiming on the contrary that all progress comes through the efforts of individuals, thus finding a moral rather than a physical basis for historical evolution. Goldwin Smith was the contemporary of the great English scientists and historians of the middle and latter part of the 19th century, and he was considered by them an equal in knowledge and attainments. His literary style was marked by a remarkable clearness and force of expression and in the correct use of the English language he was surpassed by no writer of his generation. Among his published works are *Lectures on Modern History delivered at Oxford 1859-61* (1866); *Irish History and Irish Character* (1861); *The Empire* (1863); *Speeches and Letters* from January 1860 to January 1865, dealing with the American Civil War (1865); *A Short History of England down to the Reformation* (1869); *The Political Destiny of Canada* (1879); *Lectures and Essays* (1882); *Dismemberment No Remedy*, a book on Home Rule (1886); *History of the United States* (1893); *Essays on Questions of the Day* (1894); *Irish History and the Irish Question* (1895); *My Memory of Gladstone* (1905); *In Quest of Light* (1906). He also wrote *Guesses at the Riddle of Existence*, *Shakespeare, the Man, Commonwealth or Empire*, *In the Court of History*, *The Founder of Christendom*, *Letters of Religious Inquiry*, and *Labor and Capital*. He founded and edited in Toronto a Canadian monthly, the *Nation*, and the *Toronto Week*. Up to the time of his death he remained an active journalist.

**SMITHSONIAN INSTITUTION.** An institution established in 1846 in accordance with the provisions of the will of James Smithson, an Englishman, who bequeathed his fortune to the United States for the increase and diffusion of knowledge. The parent institution has administrative charge of several branches which were developed by its earlier activities and are now supported by Congressional appropriation. These are the United States National Museum (q. v.), the International Exchange Service, the Bureau of American Ethnology, the National Zoölogical Park, the Astrophysical Observatory, and the Regional Bureau for the International Catalogue of Scientific Literature. The most important event in the history of the institution during 1910, at least from a popular standpoint, was the return of the Smithsonian African Expedition, in charge of Theodore Roosevelt. This expedition was entirely financed from private sources through contributions by friends of the Smithsonian Institution. The collection of large and small mammals from East Africa obtained by this expedition is probably

more valuable than is to be found in any other museum in the world. The series of birds, reptiles and plants are also of great importance. The results of the expedition in acquisitions of the institution were as follows: Mammals, 4897; birds, about 4000; reptiles and batrachians, about 2000; fishes, about 500; total, 11,397. A few marine shells were collected near Mombasa and land and fresh water shells throughout the regions visited. Several thousand plants were also collected. The anthropological material was gathered by Dr. Mearns and others.

The institution proposes to carry on an exhaustive biological survey of the Panama Canal Zone during 1910-11. By the construction of the Gatun dam a vast fresh-water lake will be created which will drive away or drown a majority of the animals and plants now inhabiting the locality and quite possibly exterminate some species before they become known to science.

Through the generosity of Mrs. E. H. Harriman a trust fund, yielding an income of \$12,000 a year, has been placed under the direction of the institution for the specific purpose of carrying on scientific studies, particularly of American mammals and other animals, the donor specifying Dr. C. Hart Merriam as the investigator to carry on the work during his lifetime.

In March, 1910, Dr. Ales Hrdlicka, Curator of the Division of Physical Anthropology of the United States Museum, proceeded to South America and the Panama Canal Zone for the purpose of making anthropological researches and particularly to undertake investigation into the question of man's antiquity in Argentina. The researches occupied nearly two months and the expedition secured numerous geological, paleontological, and anthropological specimens, some of which will throw much light on the antiquity of the finds to which they relate.

The publications of the institution include the *Smithsonian Contributions to Knowledge*, the *Smithsonian Miscellaneous Collections*, and the *Smithsonian Annual Reports*. In addition the respective departments issue many publications. The scientific literature produced through the institution aggregates about 350 volumes made up of several thousand memoirs and papers. The annual income of the parent institution is about \$60,000 and the Congressional appropriations disbursed under its direction for the government branches administered by it aggregate about \$1,000,000 each year. The secretary is Charles D. Walcott, and the assistant secretary in charge of the United States National Museum is Richard Rathbun.

**SMOKE CONSUMER.** See **CHEMIST.**

**SMOKE PREVENTION.** The movement to abate the smoke nuisance in cities was continued in various parts of the country throughout the year. State legislation applying to Boston, Cambridge, Somerville, Chelsea, Everett, and Brookline, Mass., and a part of Boston Harbor, went into effect on July 1, 1910. The act, which was drawn by the Committee on Fuel Supply of the Boston Chamber of Commerce, remedied defects in an earlier law, and laid down more specific standards, including the Ringelman smoke density charts, as published and used by the U. S. Geological Survey. A board was created to supervise the enforcement

of the law, which work will be in the direct charge of a smoke inspector.

**SNOWDEN, J. H.** See LITERATURE, ENGLISH AND AMERICAN, *Philosophy and Religion*.

**SNOW SHEDS, CONCRETE.** See CONCRETE.

**SOCIAL PHILOSOPHY.** See PHILOSOPHY.

**SOCIAL SERVICE, AMERICAN INSTITUTE OF.** An organization founded in 1898, to serve as a clearing house for facts, experiences and ideas on social and industrial betterment. Its plans are to create a museum of municipal facts and photographs, and a museum of the laws of all countries touching social problems. Those interested may consult its large specialized library and its department of expert information, and may borrow books and documents so far as the library contains duplicates. The institute has several thousand negatives of social subjects from which lantern slides may be made to order, conducts a lectureship on social subjects, arranges for special investigations, prepares bibliographies and had in 1910 over 500 classes in the United States and Canada. All its services are free except special investigations. Its office is in New York City.

**SOCIALISM.** THE INTERNATIONAL CONGRESS. The Eighth International Socialist Congress, with some 900 delegates present, was opened at Copenhagen on August 29, by a speech from M. Gustave Bang, a member of the Danish Parliament, who declared that the object of workers was to put an end to the class war by uniting with the workers of foreign countries, whereas capitalized enterprise and exploitation always tended to cause war between the nations. A subsequent speaker declared that the International Socialist party comprised 33 nationalities, and that the total number of Socialist voters in the world was now 8,000,000. In general, the objects for which the Congress was working were: First, coöperation as to Socialistic policy; second, the promotion of trade unionism and international solidarity; third, the prevention of war by arbitration and disarmament; fourth, labor legislation for the relief of unemployment; and fifth, the abolition of the death penalty. A resolution was drafted to the effect that it was the duty of all Socialists to unite in resisting militarism. Reports were made by the commissioners appointed to investigate the questions of unemployment, arbitration and disarmament, international solidarity, and the coöperative movement in socialism, each of which made specific recommendations. As to unemployment, a resolution was presented demanding that full statistics be obtained, that public works should pay union rates of wages, that the trade union funds should be subsidized for the relief of the unemployed and, in general, favoring legislation for limiting hours of labor, and subvention by the state of benefit funds. As to arbitration and disarmament, the question was raised as to the possibility of a general strike against a war, but it was finally decided to leave this question to the International Bureau which should report upon it to the next Congress. The resolution on international solidarity demanded closer fusion of labor organizations internationally. The report on the coöperative movement and socialism declared that the working class should

be on its guard against thinking that coöperation in itself was enough. Coöperation had nothing to do with socialism. If a coöperative society pays the trade union rate of wages and contributes to the trade unions and the Socialistic party it was proper for the Socialists to support it. At the International Socialist Women's Congress, held at Copenhagen at the same time, with 200 delegates representing twenty countries, it was resolved that Socialists should stand for complete woman's suffrage and against any property qualification.

**GERMANY: NUMERICAL STRENGTH.** Not only is the German Social Democracy the most prosperous and effective body of Socialists, but it is also the most numerous. It has advanced steadily in power in recent years. It counted in 1910, including women, 720,038, as against 633,309 in 1909. The women numbered 82,642 as compared with 20,383 the year before. The membership has latterly increased at the rate of about 14 per cent. a year. There are some 3000 officers engaged in its administrative work. Associated with it are choral societies and societies formed for purposes of athletics or sports, which together have a membership of 220,000, and also the trade unions which have a membership of 1,800,000. At the last election it received three and one-quarter million votes out of sixty-four million inhabitants. In the various Landtags of Germany there are 140 Socialist deputies; in the Reichstag, there are 52. The party controls 76 daily newspapers and one quarterly. The leading Berlin organ, *Vorwärts*, had a subscription of 139,000 in 1910. Despite this numerical strength, they have not a proportionate influence in politics in the Reichstag and especially in Prussia. In the latter kingdom the condition of the franchise has excluded them from any political development, and their agitation for universal suffrage and against the three-class system has had but little effect. An attempt was made to precipitate a great political strike in July, 1910, but nothing came of it. (See *GERMANY, History*.) In the elections of 1907 they lost half of their representatives in the Reichstag. Since then, however, they have gained repeatedly in the partial elections and their influence has been so much strengthened by the prevailing discontent with the imperial fiscal policy that many have predicted that they would return to the 1911 Reichstag 120 strong.

**DIVISION IN THE GERMAN PARTY.** The strictly orthodox Socialists of Prussia and Saxony were bitterly opposed to the compromises which certain Socialist groups in the South, especially in Baden, made with other political parties in order to gain immediate ends. In the South the Socialists, finding themselves under governments with a more liberal tendency, believed such political alliances to be good policy. At the Congress of Nuremberg in 1908 they were rebuked by the orthodox element but declared that they were responsible only to their local organizations for their parliamentary tactics. In Baden the Socialist deputies afterwards voted the budget in the Landtag and even sent a committee to congratulate the Grand Duke on his golden wedding. This occasioned loud protests from the Prussian orthodox branch of the party which compared these opportunists to strikebreakers. Nevertheless, the Socialist congress in Baden in August upheld the action of the deputies and expressed confidence in them.

In Hesse the Socialists favored the same course. The orthodox party believed that the policy of compromise won for the Socialists merely temporary allies who could not be relied upon at a crisis. They deprecated the sacrifice of essential Socialist principles for the mere purpose of gaining immediate ends and of making an apparently rapid progress and they urged the tightening of the lines and the exclusion of the half-hearted or insincere by a plain statement of the pure principles of collectivism.

**THE MAGDEBURG CONGRESS.** This attitude of the Baden deputies toward government finance bills was the subject of important debate in the Congress of the German Socialist party at Magdeburg in the latter part of September. A rigid resolution was offered by the more orthodox element to the effect that if the Baden Revisionists should again violate the rules laid down by the Committee of the Congress they should be excluded from the party. The Revisionists declared that they would not take part in this discussion, but the Congress decided to go on with it, and 70 Revisionist delegates left the hall, whereupon the resolution was carried by 228 to 64. In the session of September 22, a member was loudly cheered on making a declaration against the régime of personal absolutism and saying that Socialists agreed in favor of a Republic in place of it. For the Socialist debate in the Reichstag in November apropos of the Kaiser's Königsberg speech, see GERMANY, *History*.

**FRANCE: GAINS IN THE ELECTIONS.** In the elections of April 24 and May 8, 1,125,877 votes were cast for the Unified Socialists, an increase of 200,000 over the preceding elections, and 76 deputies were elected as compared with 55 in the last legislature. It was admitted, however, that they owed 17 of these seats to Conservative voters, who had been disgusted by the Radical programme. Their gains were chiefly in the country districts. In the cities they suffered some reverses, losing votes in Paris and failing to elect their candidates in several of the smaller cities. The success of the campaign in the country was due largely to the energetic efforts of the Socialists to win the peasantry over to their agrarian programme. While they preached collectivism in the cities they appeared before the peasants as champions of peasant proprietorship, arguing that a Socialist programme would certainly benefit the peasantry. Despite the extraordinary gains of the Socialists, some of their prominent writers warned the party against taking too hopeful a view of the situation. They pointed to the large proportion of these gains which were due to the disaffection of other parties with the government. These accessions were most fortunate for the Socialists, but it was a question how long they could retain their new allies. Although the Socialist press gave expression to high hopes of the speedy triumph of collectivism, there were some who saw in them rather a temporary victory, and pointed to the difficulty of concerted action owing to the antagonism between the Socialist reformers of the Jaurès type and the radical Marxists or Guesdists. Moreover, the temper of the people at large was not favorable to organized socialism, although inclined to radicalism. The Socialist deputy, M. Albert Thomas, announced in the Chamber the programme of the Unified Socialists. This comprised the following features: Collectivism; reform; secularization; progressive

taxation of income and successions; reduction of the customs tariff; monopoly of alcohol; inspection of house industries; control of the financial group that exploits savings; laws for the insurance of outdoor workmen; prevention of colonial undertakings; the right of civil servants to form trade unions; penal laws against employers who do not recognize trade unions; woman suffrage, etc. For the attitude of the Socialists toward the government during the great railway strike, see FRANCE, *History*.

**THE BRITISH EMPIRE.** In Great Britain the Social Democratic party, with a membership of about 17,000, supported eleven candidates in the general election of 1910, and only one was successful. On the other hand, the Labor party, which since the Hull Conference of 1908 has been pledged to socialism, increased its vote over that in 1906 by 57 per cent., and returned to Parliament 42 out of their 56 candidates. (See GREAT BRITAIN, *History*.)

In Australia the Socialist Labor party was victorious in the election of April, 1910. (See AUSTRALIA, *History*.)

**BELGIUM.** The Belgian Socialists, on the whole, favored a policy of participation in the government. They had hoped for greater successes at the last election as the power of the dominant Catholic party seemed clearly on the wane, but the Ministry lost only two seats and retained a majority of six. The Socialists received 500,000 votes and a Socialist congress assembled at Brussels on June 26 and 27 to consider the best means of overthrowing the Ministry. A policy of parliamentary obstruction was favored by the more aggressive element of the party but the congress finally decided upon a vigorous campaign for universal suffrage in place of plural voting, hoping to secure Liberal support to that end.

**DENMARK.** In 1909 the Social Democrats increased their vote in the general elections by 18,000, receiving one-third of the total votes cast, but in 1910 the party did not participate in the recent progress of the movement as a whole. The results of the elections were unfavorable to it. The Radical Ministry, which they supported, fell from power and they did not add to the number of their representatives in parliament, which continued to be 24.

**ITALY.** In the last elections the Italian Socialists received 339,000 votes. The liberal sympathies of the Ministry and the promise by the premier, M. Luzzatti, of social reforms, won over the Socialist deputies to the side of the government. The Socialists of the south contended especially for suffrage reform and against political corruption. The Socialists in northern Italy were better organized and formed a more compact working group. There were some signs of dissension between the northern and southern Socialists, the latter accusing the Socialists of the north of neglecting their duty of spreading the doctrines among the people at large. The Socialists gained four seats in the Provincial Council elections, and in the Milan municipal elections all of the 25 Socialist candidates nominated were elected. In the Congress of Milan, October 21-25, the majority supported a motion of the reform element in favor of a truly national Socialist movement, and the preparation for revolution by the gradual conquest of reforms on behalf of the proletariat, including universal suffrage for both sexes, the gradual reduction of military expenses, a more active

participation in political and educational affairs and in the concerns of organized labor, and the enactment of laws of insurance against invalidism and old age.

**SPAIN.** In Spain the Socialists for the first time were represented by a deputy in the Cortes, Pablo Iglesias having been elected from Madrid in the general election of 1910 by a vote of 40,000. His political speeches, however, have marked him as an anarchist rather than a socialist. They have acted marked by frequent appeals to violence. The Spanish working classes are divided into Socialists and Anarchists. The Socialists have not repudiated the policy of violence, but have actually at times shown a tendency to join with the Anarchists.

**RUSSIA.** The introduction of social reforms after the Russo-Japanese War, the calling of the Duma and the revolutionary movements of 1905 and 1907 have acted unfavorably upon the Socialist party in Russia. Only a small and discouraged remnant of that party was represented in the Congress of Copenhagen. The party is divided upon the question of political tactics, some demanding that the Socialist deputies in the Duma shall withdraw, and others that they shall remain isolated and use the Duma merely as a vantage ground for open propagandism; others still favored a policy of alliance with other political groups in parliament. Rivalries between the leaders who represent these divergent views have prevented the compact organization of the party.

In Finland the Socialists made great gains in the elections following the dissolution of the Diet, securing 86 seats out of 200.

**UNITED STATES.** There were substantial Socialist gains in the United States during the year 1910. In the Congressional and State elections the Socialist vote was 804,756. For the first time they elected a representative to Congress, Mr. Victor L. Berger being chosen from the Fifth Congressional District of Wisconsin. (See Wisconsin, *Conventions and Elections*.) In April Milwaukee elected as mayor Emil Seidel, a Socialist. A national Socialist convention was held in Chicago in May. The paying members of the organization were reported by the secretary to number 50,000.

#### SOCIAL WORK OF THE CHURCHES.

Within the past ten years there has been a great increase in the distinctly social activities of the various Christian bodies. In the year 1889, a group of English (Established) Churchmen formed the Christian Social Union. Two years later a similar society adopting the same name was formed in the United States. The two societies are alike, both in the motives that led to their formation, and in the methods and principles of their work.

The Christian Social Union undertakes first to bring the moral principles of the Christian faith to bear on social and substantial problems, and secondly, to study the "practical problems" of society in the light of this principle with the hope of pointing out where and how it may and should determine opinion and action.

In 1901, the General Convention of the Episcopal Church in America created a Joint Commission on the Relation of Capital and Labor which was designed:

First, to study carefully the aims and purposes of the labor organizations of our country; secondly, in particular, to investigate the causes of industrial disturbances, as these may arise;

thirdly, to hold themselves in readiness to act as arbitrators, should their services be desired, between the men and their employers, with a view to bring about mutual conciliation and harmony in the spirit of Christianity. Reports were made to the conventions of 1904 and 1907, which, while "designedly general in terms," were in the main suggestive but contained a strong protest against the abuse of child labor.

The great Ecumenical Council held in 1908 at Lambeth passed the following resolutions:

"The Conference recognizes the ideals of brotherhood which underlie the democratic movement of this century, and, remembering our Master's example in proclaiming the inestimable value of every human being in the sight of God, calls upon the Church to show sympathy with the movement in so far as it strives to procure for all just treatment and a real opportunity of living a true human life, and by its sympathy to commend to the movement the spirit of our Lord Jesus Christ, in Whom all the hopes of human society are bound up.

The social mission and social principles of religion should be given a more prominent place in the study and teaching of the Church, both for the clergy and the laity.

The ministry of the laity requires to be more widely recognized, side by side with the ministry of the clergy, in the work, the administration, and the discipline of the Church.

A committee or organization for social service should be part of the equipment of every Diocese, and, as far as practicable, of every parish.

The Church should teach that the Christian who is an owner of property should recognize the governing principle that like all our gifts, our powers, and our time, property is a trust held for the benefit of the community, and its right use should be insisted upon as a religious duty.

The Conference urges upon members of the Church practical recognition of the moral responsibility involved in their investments. This moral responsibility extends to—

(a) The character and general social effect of any business or enterprise, in which their money is invested;

(b) The treatment of the persons employed in that business or enterprise;

(c) The due observance of the requirements of the laws relating thereto;

(d) The payment of a just wage to those who are employed therein."

These in turn were accompanied by a careful report on social and economic questions. It is generally understood that no small part of the advanced position taken by the Lambeth Conference was due to the influence and industry of the Christian Social Union. The Anglican Church in the antipodes is also at work along social lines. There is a Christian Social Union there with branches in Adelaide, Melbourne and Sydney. The Diocese of Melbourne has a Committee on Social Questions which has not hesitated to make concrete suggestions. The Anglican Church in Canada is considering various aspects of the question and the programme of recent Canadian church congresses has given social questions a large measure of attention.

In the American Episcopal Church the dioceses are one by one giving attention to the

subject, mainly through the appointment of committees or commissions on social welfare. The first was that organized by canon, in the diocese of Long Island in 1905, consisting of the bishop, ten clergymen and ten laymen. This Social Service Committee has for its purpose the "carrying into effect any measure or measures recommended by the Diocesan Convention for the betterment of social conditions in the diocese." Subdivided into a number of sections it has accomplished much good in various ways. The relations between labor and the Church have become much more friendly. There have been a number of substantial victories in preventing the encroaching of business considerations upon Sunday, and the committee was no small factor in calling the attention of Governor Hughes to the need for the abolition of the race track gambling.

At the Cincinnati General Convention of the Episcopal Church in 1910 the following resolutions were adopted:

Resolved, That a Joint Commission on Social Service be appointed, consisting of five bishops, five presbyters and five laymen. It shall be the duty of this Commission to study and report upon social and industrial conditions, to coördinate the activities of the various organizations existing in the Church in the interest of social service, to cooperate with similar bodies in other communions, to encourage sympathetic relations between labor and capital, and to deal according to their discretion with these and kindred matters.

The Church Association in the interest of Labor, or as it is more popularly known, "Cail," has for years devoted its energies to bring labor and capital into closer relations; to lead them to understand one another and to meet on a common basis of mutual regard and respect.

The Roman Catholic Church has not been so aggressive in its social work although it shows encouraging signs of awakening. In October, 1910, the first national conference of Roman Catholic Charities was held in Washington, the keynote of which was struck in the sermon of Archbishop Blenk who in the conference sermon said: "If God wants us to be charitable, He wants us to be enlightened in our charity; that is charity guided and directed by the light of the intellect, for He is not only the God of love, He is also the God of light."

According to Monsignor White, Supervisor of Roman Catholic Charities in Brooklyn, "study and action were recommended and the delegates were exhorted to take an interest in the Consumers' League, the Child Labor Committee, the anti-tuberculosis crusade and other movements for the betterment of the poor."

Congregationalism it is claimed in a recent report on "The Church for Brotherhood in Industry" identifies its social ideals with religious life and action.

Through the Committee on Industry and the Secretary of the Congregational Brotherhood the Congregationalists are planning to enter into close and active coöperation with the Federal Council of the Churches of Christ in America, through its Committee on the Church and Modern Industry. All Congregational national societies, State conferences and local churches are urged to coöperate with this body representing all Protestant denominations, in all matters requiring interdenominational

expression or action, in order that the churches shall present a united front to organized employes and employers and to State legislatures in any situation requiring the declaration of Christian principles or coöperative effort.

The Presbyterians have no commission on Social Service, but they have established a "Department of Church and Labor," with the Rev. Charles Stelzle as superintendent, and Warren H. Wilson, Ph. D., as assistant superintendent, and G. B. St. John as field investigator. The headquarters are at 156 Fifth Avenue, New York. Mr. Stelzle has been an effective factor in arousing his own communion to its social obligations and in bringing organized labor into closer relationship with the Church. He has been remarkably successful in arranging large mass meetings and in securing intelligent publicity. He has removed much of the prejudice that existed among working men for clergymen and has overcome a measurable amount of the indifference of the clergy and laity toward labor movements.

The Methodists have a strong Federation for Social Service.

The Northern Baptists have a Social Service Commission of:

Rev. Harold Pattison, St. Paul, Minn., c/o First Baptist Church; Rev. L. W. Riley, McMinnville, Oregon; Rev. Charles J. Galpin, Madison, Wis.; George T. Webb, 1701 Chestnut Street, Philadelphia, Pa.; E. A. Hanley, Providence, R. I.; H. P. Whidden, Dayton, Ohio; George W. Coleman, Boston, Mass.; Prof. C. R. Henderson, University of Chicago, Chicago, Ill.; Rev. Edward Holyoke, Providence, R. I.; Rev. E. W. Hunt, Granville, Ohio; Rev. S. Z. Batten, Des Moines, Iowa; Rev. Walter Rauschenbusch, Rochester, N. Y.; Rev. W. Q. Roselle, 2110 Green Street, Philadelphia, Pa.; Rev. A. W. Wishart, Grand Rapids, Mich.; Prof. Shailer Mathews, University of Chicago, Chicago, Ill.

At the annual meeting of the American Unitarian Association, held on May 25, 1910, the following resolution was adopted:

Whereas, it is to-day universally conceded that a real and intimate relation exists between the church, or churches, and all work of philanthropy and social reform, and

Whereas, in the growing complexity of modern life, it is increasingly difficult to determine how the church, or churches, shall manifest a recognition of this relationship and act thereupon, therefore,

Be it Resolved, That the president of this Association, through its Social Service Department be, and hereby is, requested to appoint, as soon as convenient, a Commission of fifteen members, comprising both ministers and laymen, and including representatives of all sharply-defined points of view, to be known as the Unitarian Commission on the Church and the Social Question, which Commission shall be charged with the task of defining specifically the contribution which the churches, both individually and in their collective capacity, can and should make to the work of social progress and reform.

**SOCIETY OF CHEMICAL INDUSTRY OF GREAT BRITAIN.** See CHEMISTRY.

**SOCIOLOGY.** SOCIOLOGICAL SOCIETY. At the annual meeting of the American Sociological Society at St. Louis, in December, Professor Edward A. Ross of the University of Wisconsin

gave some result of his impressions of China gathered in the course of an extensive tour in the inner provinces. He pointed out the numerous evidences of the severity of the struggle for existence, and drew conclusions regarding the family, the conservation of natural resources, the language, changes going on in the political and social constitutions and the physical and mental stamina of the people. Another study entitled "A sociological appraisal of western influence in the Orient," by Rev. Edward W. Capen, dwelt on the social influence of missionaries and the development of education, industry, medicine, and political and social reform among Oriental people.

Studies were presented bearing on the rural life problem. Professor John M. Gillett pointed out the uselessness of agitations for return to the farm so long as the great forces leading to the city-ward movement are not fully counteracted. He and other speakers pointed out the supreme need of reorganizing rural school and social life, of developing leadership in rural communities, and creating a new spirit of concrete social service in the life of the country church.

The address of the president of the Society, Professor Franklin H. Giddings of Columbia University on "The relation of social theory to public policy," after epitomizing the contributions of Comte, Spencer, and Bagehot, treated the problem of international peace from the sociological view point. The subject of social surveys was discussed and the progress of surveys in Buffalo and Kansas City reported. Professor George E. Howard of the University of Nebraska, speaking on "Social control of domestic relations," emphasized the importance of a rational view and of preaching actual rather than conventional morals; he also discussed compulsory social hygiene, juvenile courts, State endowment of mothers, positive eugenics, venereal diseases, uniform marriage laws, and a college for the study of the domestic relations. Professor Frank W. Blackmar of the University of Kansas in discussing the progress of social reform pointed out that most reformers advance destructive criticism without being able to propose constructive policies. He held that the chief problem of modern reform is to eliminate evils and bring about better conditions under the actual limitations of complex social life; most reform leaders are not sufficiently endowed to achieve this. Professor Weatherly of the University of Indiana speaking on "The racial elements in social assimilation," declared that thus far America had met with little difficulty in assimilating the great variety and numbers of foreign peoples who come here because of their willingness to be absorbed. He dwelt on the importance of language as a factor for and against assimilation and drew the conclusion that, on account of ethnic and cultural differences, general amalgamation is unlikely in this country. Professor Hayes of the University of Illinois declared that sociology was as yet for the most part in the metaphysical stage of its development and that every effort should be made to advance it to the scientific stage. He noted the great reliance upon so-called social forces, particularly in the writings of Lester F. Ward, and pointed out the necessity of replacing "supposed forces and substances with scientific explanations."

The membership of the Society has reached

three hundred, chiefly members of departments in colleges, university students and social workers. Professor Giddings was re-elected president and Alvan A. Tenney was re-elected secretary-treasurer. The next meeting of the Society will be held in Washington, D. C., December, 1911, concurrently with that of the American Economic Association.

**SOCIETY OF MEDICAL SOCIOLOGY.** A number of leading physicians of New York City formed the American Society of Medical Sociology. Dr. Abraham Jacobi accepted the honorary presidency of the Society, of which the founder and president was Dr. Wm. J. Robinson, editor of several medical journals. Dr. James P. Warbasse, a vice-president, is known as the author of "Medical Sociology." Another vice-president, Dr. Wm. L. Holt, was then in Europe investigating the associations advancing the work of interest to the Society. Among the questions to be studied are occupational diseases; relation of the strain of our rapid modern life to insanity and nervous diseases; food adulterations and their influence on health; economic aspects of tuberculosis; social and economic effects of alcohol; infant mortality; the influence of Christian Science and irregular medical cults on the public health; the physical factors in marriage and divorce, in race suicide, and in the social evil. The founder stated that preventive medicine is a social matter; that fully 75 per cent. of our physical ailments are caused by existing social and economic conditions.

**BIBLIOGRAPHY.** Among the books of greatest interest to the sociologist were the following:

Davenport (C. B.), *Eugenics: The science of human improvement by better breeding*; Haddon (A. C.), *The races of man and their distribution*; Frazer (J. G.), *Totemism and exogamy; a treatise on certain ancient forms of superstition and society* (4 vols.); Bartlett (F. C.), *L'évolution sociale*; Haeckel (E.), *Evolution of man; a popular scientific study* (2 vols.); King (I.), *The development of religion: a study in anthropology and social psychology*; Ross (E. A.), *Latter day sinners and saints*; Samuelson (J.), *The human race: its past, present and future*; Small (A. W.), *Adam Smith and sociology; a study in the methodology of the social sciences*; Worms (R.), *Les principes biologiques de l'évolution sociale*; Baldwin (J. M.), *The individual and society*; Ellis (H.), *The Criminal; American Sociological Society, Papers and proceedings*, vol. 4; Balch (E. G.), *Our Slavic fellow citizens*; Bateson (W.), *The methods and scope of genetics*; Gumpłowicz (L.), *Der Rassenkampf* (2d ed.); Le Bon (G.), *The crowd: A study of the popular mind* (new but unrevised ed.); Fishberg (M.), *The Jews: A study of race and environment*; Ellwood (C. A.), *Sociology and modern social problems*; Sidney and Beatrice Webb, *The state and the doctor*; Hawkins (C. B.), *Norwich: A social study*.

More complete lists may be found in *The Economic Bulletin*, and *The American Journal of Sociology*; periodical literature is listed in the former, and in *The Reader's Guide*, and the *Annual Library Index*.

**SOILS.** GROWING INTEREST IN SOIL CONSERVATION. Soil investigation was greatly stimulated during 1910 by a rapidly developed appreciation of the importance of conserving

soil resources and more efficiently utilizing them in crop production. There never was greater activity than during the past year in taking inventories, by means of soil surveys and investigations, of the resources and possibilities of the soil, and in disseminating knowledge of improved methods of soil culture. The need of soil conservation is indicated by estimates published by F. W. Clarke of the United States Geological Survey, according to which the soil covering of the earth is being washed away at an average rate of 68.4 tons per square mile annually, the highest rate of denudation being 100 tons in Europe, the lowest 44 tons in Africa. The estimated rate for North America is 79 tons. It is significant that the region of greatest denudation, viz., Europe, is also the region of most intensive culture and highest average production per acre. The maintenance of this high level of production is due to the fact that some of the older countries of Europe practise improved methods of culture and for many years have steadily drawn upon the fertility of newly settled regions in the form of fertilizing materials and feeding stuff rich in fertilizing constituents and thus kept the balance of fertility in their favor. The United States on the other hand has been for many years a large exporter of soil fertility.

A. D. Hall of Rothamsted points out that there is a limit to the level to which the production of any soil may be raised, and lays down the important principle that the higher the level of production the larger the waste of soil fertility, especially nitrogen, and the greater the need of fertilizers.

**SOIL INVESTIGATIONS.** The past year furnished many evidences of a widespread awakening of interest in methods of soil investigation. Noteworthy among these was the holding of a second International Agrogeological Congress at Stockholm in August, the first having been held in Budapest in April, 1909. The congress was attended by representatives of many countries and considered all phases of soil investigation with the special purpose of securing uniformity of methods.

The U. S. Bureau of Soils continued its comprehensive surveys of the soils of the United States. Surveys were carried on during 1910 on 59 areas in 26 States, detailed surveys being made of 22,762 square miles and reconnaissance surveys of 79,108 square miles (mainly on the Great Plains). The total area surveyed and mapped by the Bureau up to June 30, 1910, was 359,564 square miles or 230,120,960 acres. These and similar surveys made in other countries have been found specially useful in land valuation and crop adaptation.

The value of native vegetation as an index of the quality of land, to which Hilgard called attention many years ago, received confirmation during the year by the observations of H. L. Shantz of the U. S. Department of Agriculture on the dry lands of the United States, indicating that the native vegetation furnishes an index of soil moisture conditions and thus a reliable basis for classification of the soils for crop production. A. D. Hall in a study of the correlation of crops and soils in England found a rather close relation between crop adaptation and the temperature and moisture conditions of the soil as determined by the size of the soil particles and their structure or arrangement.

**HUMUS COMPOUNDS.** The importance of humus as a soil constituent was recognized by a number of investigations during the year which did much to clear up the exact chemical nature of the humus compounds, the processes by which they are formed, and the rôle they play in connection with plant growth. Several compounds, some of which are believed to be toxic to plants, were isolated from the organic matter of the soil and their properties studied in the laboratories of the United States Bureau of Soils.

**PLANT FOOD AND SOIL.** Further investigations in the available plant food of the soil tend to show that except in very fertile soils the final crop yield is determined not by the amount of plant food readily available at any given time but by the rate at which the insoluble plant food becomes available during the growing season. The importance of the concentration of the soil solution was emphasized by the work of Widtsoe of the Utah experiment station, showing that plants require less water on rich soils than on poor. That the relative proportion of the soil constituents is of great importance is shown by the fact that Loew found the infertile condition of certain Porto Rican soils and Snowden found the diseased condition of orange and lemon trees in Southern California to be due to excess of magnesia over lime in the soils. Kelley and Guthrie found the unproductiveness of certain Hawaiian and Australian soils to be due to the presence of an excess of manganese.

**SOIL MOISTURE.** Attention was called to the importance of deep plowing and thorough surface tillage in conserving soil moisture by several investigations reported during the year. On the other hand Hitler reported upon the lowering of the ground water level and the failure of springs in certain parts of France, attributing this to the extension of the area of clean culture.

**SOIL BACTERIOLOGY.** It is in the field of soil bacteriology that probably the greatest amount of work was done and the greatest progress made during 1910. Russell and Hutchinson of Rothamsted made further important contributions to their theory of the effect of partial sterilization by heat or volatile antiseptics on the bacterial activity of the soil which was referred to in last year's review. This theory is that partial sterilization destroys the protozoa which feed upon the ammonia-producing bacteria of the soil but does not completely destroy the latter, which, freed from their enemies, multiply rapidly and increase the fertility of the soil by the production of ammonia. This has been declared by A. D. Hall to be "the most notable addition to the theory of the soil since the publication of Hellriegel and Wilfarth's paper on the root nodule bacteria in 1886." Many other investigations throwing light on conditions favoring beneficial bacterial activity in the soil were reported during the year and much attention was given to studies of nitrification.

**NITRIFICATION.** Headden of the Colorado experiment station reported cases of phenomenal nitrification in certain Colorado and California soils. He found that certain barren so-called "alkali spots" of more or less common occurrence were really "niter spots" the surface soil of which in some cases contained over 5 per cent. of nitrates.

**LITERATURE.** Important contributions to the more permanent literature of soils during the year were a technical treatise on Soil Fertility and Permanent Agriculture and a popular book entitled *The Story of the Soil*, by C. G. Hopkins; an English treatise on Soils and Manures by J. A. Murray; and an *Introduction to the Study of the Soil Solution*, by F. K. Cameron.

**SONE, ARASUKE, Viscount.** A Japanese statesman and administrator, died September 13, 1910. He was born in 1849, in Choshu, Japan. From 1872 to 1877 he studied military tactics in France, but soon after the latter date he left the army to enter the civil service. From 1881 to 1890 he was councillor of the Legislative Bureau and held other positions. In the latter year he became secretary of the Lower House. In 1902 he was elected to Parliament and became vice-president of the House. Re-entering the government service he represented Japan at Paris from 1893 to 1897. He accepted the portfolio of justice in the third Ito Cabinet in 1898, and was Minister of Agriculture and Commerce from 1898 to 1900 in the Yamagata cabinet. In 1909 he was appointed administrator to Korea to succeed the late Prince Ito.

**SOTHERN, E. H.** See DRAMA.

**SOUTH AFRICAN UNION;** officially entitled the UNION OF SOUTH AFRICA. A British dominion, occupying 473,183 square miles (estimate) in the extreme south of the continent. Population (about), 5,200,000, of whom 1,120,000 are white. Capital, Pretoria, in the Transvaal Province.

The Union of South Africa is constituted under the South Africa Act 1909 (9 Edw. 7, Ch. 9) passed by the Parliament of the United Kingdom, on Sept. 20, 1909. In terms of that act the self-governing colonies of the Cape of Good Hope, Natal, the Transvaal, and the Orange River Colony became united on May 31, 1910, in a legislative union under one government under the name of the Union of South Africa, those colonies becoming original provinces of the Union under the names of the Cape of Good Hope, Natal, the Transvaal, and the Orange Free State (qq. v.) respectively.

The act constituting the Union provides for the appointment by the sovereign of a governor-general, who, with an executive council (of which the members are chosen and summoned by him), administers the executive government of the Union as the governor-general in council. Departments of state are established by the governor-general in council, the governor-general appointing not more than ten officers to administer them. Such officers are king's ministers of state for the Union and members of the executive council.

The Senate consists of 40 members. For ten years after the establishment of union eight are nominated by the governor-general in council and 32 are elected, eight for each province. The first election was made prior to the establishment of the Union by the two houses of each of the colonial legislatures sitting as one body,

and a vacancy will be filled by the choice of the provincial council in respect of whose province a vacancy occurs.

The House of Assembly consists of 121 elected members, 51 of whom represent the Cape of Good Hope, 17 Natal, 36 the Transvaal, and 17 the Orange Free State. Members of both houses must be British subjects of European descent.

Pretoria is the capital and seat of government of the Union. Cape Town is the seat of the legislature.

The first parliamentary election under the South Africa Act was held on Sept. 15, 1910. (See below.)

A provincial council in each province has power to legislate by ordinance on certain subjects specified in the act, and on such other subjects as may be delegated to it. All ordinances passed by a provincial council are subject to the veto of the governor-general in council. Members of the provincial council are elected on the same system as members of Parliament, but the restriction as to European descent does not apply. The number of members in each provincial council is as follows: Cape of Good Hope, 51; Natal, 25; Transvaal, 36; Orange Free State, 25.

The first provincial elections for the Cape of Good Hope and the Transvaal were held on September 15, 1910; those for Natal and the Orange Free State, on October 12, 1910.

The executive power in the subjects on which the provincial council is empowered to make ordinances is vested in an executive committee consisting of an administrator, appointed by the governor-general in council, and four members elected by the provincial council.

Governor-General, Viscount Gladstone of Lanark; Prime Minister and Minister of Agriculture, Louis Botha; Minister of Railways and Harbors, J. W. Sauer; Minister of the Interior, of Mines, and of Defense, J. C. Smuts; Minister of Justice, J. B. M. Hertzog; Minister of Education, F. S. Malan; Minister of Finance, H. C. Hull; Minister of Lands, A. Fischer; Minister of Native Affairs, H. Burton; Minister of Commerce and Industries, vacant; Minister of Public Works, and of Posts and Telegraphs, D. P. de V. Graaf; Minister without Portfolio, Dr. C. O'Grady Gubbins.

## HISTORY

**THE NEW ADMINISTRATION.** In December, 1909, Mr. Herbert Gladstone, afterwards raised to the peerage under the title of Viscount Gladstone, was appointed governor-general of the Union. He sailed for South Africa on April 30, 1910. Lord Selborne, after farewell visits to the several capitals, sail for England on May 18. Great regret was expressed at his departure. His labors in South Africa had lasted for five years and consisted chiefly of consolidation and reconciliation pursuant to the policy begun by Lord Milner. He had successfully executed his task and had done much to weld the colonies together into a single dominion. It was a difficult position since the ill feeling engendered by the war caused intense partisanship. The Chinese labor question reached an acute stage during his term of office and the educational problem also offered serious difficulty. Though he took no public part in the union movement his influence was effective in bringing it about. The first duty

of the new governor-general was to choose a prime minister. There were strong partisans of both Mr. Merriman and General Botha, but the latter was finally appointed the first Premier under the Union. On May 30 the members of General Botha's cabinet were announced. They included, among others, Mr. Smuts as Minister of the Interior, General Hertzog as Minister of Justice, and Mr. Fischer as Minister of Lands. It contained four members of the Cape Ministry, two of the Transvaal, two of the Orange Free State, and two of Natal.

**THE INAUGURATION.** The Union government was formally inaugurated on May 31, the eighth anniversary of the Peace of Vereeniging, which was celebrated under the title of Union Day as a public holiday throughout South Africa with thanksgiving services and patriotic addresses. King George sent a message expressing his hope and confidence that the new constitution would further the highest welfare of South Africa and strengthen the empire. One of the first acts of the new government was to set free Dinizulu, the native chief who had been sentenced to four years' imprisonment in March, 1909.

**THE EDUCATION QUESTION.** On June 14 General Botha in connection with his declaration of policy expressed the hope that all the old party organizations, including his own, would unite in a great party with national principles, to be known as the South African Party. Chief among the questions that confronted the government was, he said, the task of fusing the different races into one great people. The aims of the government would be the encouragement of the white population, a broad educational policy, and the prevention of Asiatic immigration. On this programme he believed all ought to be able to unite. The government, when questioned as to its policy on the language question, replied that they were in favor of teaching the child through the medium of its mother tongue as far as possible throughout the state, even if it involved greater expense. This policy was announced by the Central Council which had been appointed to establish schools on that basis. Early in July it declared as the chief features of its programme that the curriculum should be similar to the Transvaal system and that English and Dutch should be taught as languages, and that in the lower courses the pupils should be taught in their mother-tongue; also that teachers are eligible whether they speak both languages or only one of them. Supporters of General Hertzog's policy, while admitting that certain parts of the Union ought not to be forced to adopt his system, held, on the other hand, that the other system ought not to be fastened on those parts of the country which objected to it. General Botha in his speech on July 12 declared that the educational problem should be settled in the spirit that prevailed in the Transvaal. The government policy aimed at equal opportunities of language, the use of the mother-tongue as a medium of instruction, and no compulsion. It did not believe that it was either just or fair to repeal General Hertzog's measure in the Orange Free State.

**THE ELECTIONS.** As the elections of September approached it was evident that the chief issue was the education quarrel in the Orange

Free State, the Opposition accusing the Cabinet of planning to extend the Hertzog system throughout South Africa and saying that General Botha was trying to maintain party divisions which he pretended to deplore. Its leader, Dr. Jameson, declared the chief planks of the Unionist platform to be closer settlement, and improvement of the conditions of labor. Other features of their programme were the promotion of immigration and the introduction of various measures of social reform. The election campaign took place in August. Campaign speeches were made by General Botha, General Hertzog, Dr. Jameson and others. September 22 was fixed as the date for the elections. In this first political campaign under the Union it was too early for parties to divide according to any principles, and the differences continued to follow old lines. The Boer element, in general, which had formerly supported the old organization of Orangia Unie, Het Volk, and the Bond, rallied to the Nationalist party in the Orange Free State, Transvaal and the Cape provinces; whereas the Unionists drew to them the old Progressive element and were recruited chiefly from industrial and commercial classes in the towns. The personalities of the leaders, therefore, became more prominent than matters of principle. General Botha, who in the course of a very few months had risen from obscurity to the command of the army in the Transvaal during the South African War, became the logical leader after the British government granted the country autonomy, and proved himself a remarkably able and open-minded chief, winning the confidence of both races. Dr. Jameson, the leader of the Opposition, re-entered public life at about the same time that General Botha was winning his military fame, and by his political ability and personal honesty overcame the hostility of the Dutch and the indifference of the British, rising finally to a position of acknowledged leadership. Besides the difference in race as an element in politics there was a difference in institutions and occupation. The Nationalists were mainly farmers, or in some way associated with rural interests, and among the Unionists were more of those who were concerned with industrial or commercial affairs. The Opposition developed unexpected strength and as a result of the elections the position of the parties was as follows: Nationalists, 67; Unionists, 37; Labor members, 4; Independents, 13. Thus the Nationalists secured a majority of 13 over all parties.

**THE FIRST UNION PARLIAMENT.** Parliament met for preliminary business on October 31, and was formally opened on November 4 by the Duke of Connaught, who had been appointed as Royal representative for that purpose. The education question came up very early in the session of the Parliament. The Minister of Education summoned a conference of the Directors of Education in the four provinces to consider the question of the use of the languages and to recommend some means of securing uniform practice. On November 14 the Opposition in the House gave notice of a motion declaring that the Orange Free State educational legislation was in conflict with the principles of freedom and of equality of opportunity for both races in the South African Constitution. After the opening of Parliament the Duke of Connaught made a tour throughout the country. At Endaba he met a deputation of the native

chiefs, who, in their address, expressed great alarm lest they be forced into the Union and their lands be taken. In his reply the Duke reassured them, saying that they should not come into the Union until the King decided that it was necessary. On November 26 he laid the foundation stone of the new government public offices at Pretoria. He received an impressive civic welcome at Johannesburg.

**SOUTH AUSTRALIA.** A state of the Australian Commonwealth. Capital, Adelaide. Area, 903,690 sq. miles. Estimated population, December 31, 1909, 412,808. For details, see AUSTRALIA. The executive authority is vested in a governor, appointed by the British Crown and assisted by a responsible ministry. The legislative power devolves upon a parliament of two elective houses, the Legislative Council and the House of Assembly. Governor in 1910, Admiral Sir Day Hort Bosanquet; Premier (in the ministry constituted June 2, 1910), John Verran.

**HISTORY.** The South Australian elections at the end of March gave a majority of 2 to the Labor party in the legislature, thus defeating the coalition government of Mr. Peake and Mr. Butler, formed in December, 1909. Parliament met on June 2, and the Labor party carried a vote of want of confidence by 22 to 19, whereupon a Labor Ministry was formed under Mr. Verran as Prime Minister. Mr. Verran outlined the policy of the government early in July. An important feature of it was the election of a legislative council on the basis of adult suffrage. Other matters for legislation were the transfer of the Northern Territory to the Commonwealth; a progressive land tax provided the Federal measure did not pass; the breaking up of deadlocks between the two Houses; compulsory repurchase of land, etc. The government's proposals as to public works included extensive railway building and the widening of the outer harbor of Adelaide. The Legislative Council passed a measure repealing the act by which South Australia surrendered the Northern Territory to the Commonwealth. The government brought in a measure in the latter part of November for a loan of £6,800,000 to be applied to reproductive works.

**SOUTH CAROLINA.** One of the South Atlantic Division of the United States. Its area is 30,989 square miles. Its capital is Columbia.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 1,515,400, as compared with 1,349,316 in 1900, and 1,151,149 in 1890. The increase in the decade 1900 to 1910 was 13.1 per cent. The State ranks twenty-sixth in point of population, whereas in 1900 it ranked twenty-fourth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The chief mineral products of the State are those connected with phosphate rock. The production of these in 1908, the latest year for which statistics are available, was 225,495 tons, valued at \$989,881. This was a slight decrease over the production of 1907. The value, however, was greater than in that year. Phosphate beds occur interruptedly in a belt, the lower limit of which extends along a line from a point near the source of the Wanda River in Charleston county to the mouth of the Broad River. The belt follows the coast, running back as far as twenty miles from

the ocean. Phosphate rock occurs in two forms, as land rock and river rock. The river rock is mined from the river channels. Next to phosphate rock, the chief minerals in point of value are the products of clay. In 1908 these amounted in value to \$615,248. Stone is produced in considerable quantities and gold also occurs in the State. The gold products in 1910 were valued at \$31,566. Among other products are stone, gas, coke and monazite. Kaolin, fire clay, peat and tin are also found in the State, and there are deposits of iron in various places.

**AGRICULTURE.** The acreage, production and value of leading crops are given for 1909 in the following table:

	Acreage.	Prod. bu.	Value.
Corn, 1910.....	2,418,000	44,733,000	\$36,681,000
1909.....	2,218,000	37,041,000	33,337,000
Winter wheat, 1910.....	453,000	4,983,000	6,279,000
1909.....	381,000	3,810,000	5,563,000
Oats, 1910.....	219,000	4,599,000	2,989,000
1909.....	211,000	4,431,000	3,190,000
Rye, 1910.....	4,000	40,000	58,000
1909.....	4,000	39,000	55,000
Rice, 1910.....	17,000	357,000	268,000
1909.....	18,600	476,000	433,000
Potatoes, 1910.....	10,000	900,000	945,000
1909.....	9,000	765,000	880,000
Hay, 1910.....	67,000	84,000a	1,344,000
1909.....	66,000	81,000	1,256,000
Tobacco, 1910.....	30,000	18,900,000b	1,625,000
1909.....	66,000	32,000,000	2,336,000
Cotton, 1910.....		1,116,000c	
1909.....		1,099,000	

a Tons. b Pounds. c Bales.

**EDUCATION.** The total enrollment in the public schools of the State in 1910 was, white children, 156,051, and colored children, 184,364. The average attendance of white children was 114,731, and of colored, 129,170. The total number of schools in the State was 5088. Of these 2702 are for white children and 2386 for colored children. In these schools are employed 6968 teachers, 1606 men, and 5362 women. Of these 4352 were white and 2616 colored. The average annual salary paid white teachers during the year was \$539.46 for men and \$253.26 for women, while the average salary paid to colored teachers was \$118.18 to men and \$94.30 to women. Great advance has been made in recent years in the State in agriculture and industrial education. The extension work carried on by the Clemson College has had excellent results. During 1910 the principals of the college placed in the field a rural school agriculturist, who devotes his entire time to field work. The rural schools of the State have been for many years in poor condition, largely as a result of the lack of funds. The Board which administers the Peabody fund has undertaken a systematic campaign for the betterment of rural schools in the State. This plan provides for the appointment of a State supervisor of elementary rural schools, who is associated directly with the State Department of Education, and is the field representative of that officer. The high schools of the State are in a better condition than the rural schools. The first high school conference was held in the University of South Carolina, during the spring of 1910, and much benefit was derived from its discussion.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the Industrial School for White Boys at Florence, the State Hospital for the Insane at

Columbia, and the South Carolina Penitentiary at Columbia.

### POLITICS AND GOVERNMENT

There was no session of the legislature of the State in 1910, as the sessions are biennial, and the last was held in 1909. The next session begins January 11, 1911.

**CONVENTIONS AND ELECTIONS.** South Carolina is so emphatically a Democratic State that the nomination of Democratic candidates for office amounts practically to election. The chief issue in the State in 1910 was the liquor question. The State for several years has been under the dispensary system, which proved a failure. There has been a strong sentiment for prohibition in the State, but dissatisfaction with the dispensary system has brought about a reaction, so that the prohibition forces are somewhat weakened. At the State primaries, held for nomination of State officers September 16, Coleman L. Blease, a Democrat and anti-Prohibitionist, received the nomination for governor. The Republican party made no nominations for State officers. The Socialists, however, nominated C. W. Manning for governor. In the election on November 8, Mr. Blease received practically all the votes cast in the State, 30,739, as against 70 cast for the Socialist candidate. The other Democratic State nominees were elected by practically the same vote.

**STATE OFFICERS.** Governor, Coleman L. Blease; Lieutenant-Governor, C. A. Smith; Secretary of State, R. M. McCown; Attorney-General, J. F. Lyon; Treasurer, R. H. Jennings; Comptroller-General, A. W. Jones; Superintendent of Education, J. E. Swearingen; Adjutant-General, W. W. Moore; Commissioner of Agriculture, E. J. Watson; Commissioner of Insurance, F. H. McMaster—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, Ira B. Jones; Justices, C. A. Woods, Eugene B. Gary, D. E. Hydrick; Clerk, U. R. Brooks—all Democrats.

**STATE LEGISLATURE, 1911.** Democrats, Senate, 43; House, 124; Joint Ballot, 167.

**SOUTH DAKOTA.** One of the West North Central Division of the United States. It has an area of 77,614 square miles. Its capital is Pierre.

**POPULATION.** The population in 1910, according to the Thirteenth Census, was 583,888, as compared with 401,570 in 1900, and 348,600 in 1890. The percentage of increase in the decade from 1900 to 1910 was 45.4 per cent. The State ranks thirty-sixth in point of population, whereas in 1900 it ranked thirty-eighth. The population of the larger cities and towns will be found in the tables in the articles UNITED STATES CENSUS.

**FINANCE.** The report of the treasurer for the fiscal year ending June 30, 1910, showed a balance on hand July 1, 1909, of \$789,886. The receipts for the year were \$4,439,864, and the disbursements were \$4,567,182, leaving a balance on hand June 30, 1910, of \$662,569.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions of the State include the School for the Deaf, the Northern Hospital for the Insane, the School for the Blind, State Penitentiary, Soldiers' Home, and the Hospital for the Insane. The disbursements for these institutions during the year were as follows: School for the Deaf, \$882; the Northern Hospital, \$6414; School for the

Blind, \$906; Penitentiary, \$24,356; Soldiers' Home, \$1362; and Hospital for the Insane, \$6213.

**MINERAL PRODUCTION.** The only mineral product of considerable importance in the State is gold, which is found almost entirely in the Black Hills in the Homestake Mines. The value of the gold produced in 1910 was 5,187,070, a considerable decrease over the value of the product of 1909, which was \$6,573,600. There were produced of silver 113,460 fine ounces as compared with 196,300 fine ounces in 1909. A small amount of copper was mined in the State in 1909. This amounted to 41,988 pounds.

**AGRICULTURE.** The acreage, production and value of leading crops for 1909 and 1910 are given in the following table:

	Acreage.	Prod. bu.	Value.
Corn, 1910.....	2,162,000	54,050,000	\$21,620,000
1909.....	2,059,000	65,270,000	32,635,000
Spring wheat 1910	3,650,000	46,720,000	41,581,000
1909	3,375,000	43,500,000	42,839,000
Oats, 1910.....	1,525,000	35,075,000	10,522,000
1909.....	1,450,000	43,500,000	14,790,000
Barley, 1910.....	1,025,000	18,653,000	10,633,000
1909.....	1,021,000	19,910,000	8,960,000
Rye, 1910.....	35,000	595,000	363,000
1909.....	33,000	578,000	341,000
Flaxseed, 1910.....	860,000	3,300,000	7,587,000
1909.....	800,000	5,640,000	8,516,000
Potatoes, 1910.....	55,000	2,420,000	2,057,000
1909.....	50,000	4,000,000	2,520,000
Hay, 1910.....	510,000	408,000a	2,397,000
1909.....	636,000	804,000	4,100,000

a Tons.

### POLITICS AND GOVERNMENT

There was no session of the State legislature in 1910, as the sessions are biennial, and the last was held in 1909.

**ELECTIONS.** In the primaries, held on June 7, Governor Vessey was renominated by the Republicans. Congressmen Martin and Burke were also renominated. The Democrats nominated C. L. Wood for governor. In the election held on November 8, Governor Vessey was re-elected by a majority of about 20,000. The proposed county option measure was defeated by about 15,000 votes as was also the proposed amendment providing for woman suffrage.

Six laws and six amendments to the constitution were voted on, all being defeated except one allowing State school lands to be leased for agricultural purposes. The ballot was seven feet long and ten inches wide. The State gold production was lessened by reason of the big strike in the Homestake Mines. The bank reports for December showed deposits for \$100 per capita in the State. The State again shows the largest per capita increase of wealth during the year of any State in the Union.

Considerable progress in railroad building was made in 1910. Natural gas is becoming more extensively used at Pierre and westward. All power plants in the capital city are run by gas this year.

A large amount of Indian reservation land was opened to homesteaders. Dewey County was organized.

**STATE OFFICERS.** Governor, R. S. Vessey; Lieutenant-Governor, Frank M. Byrne; Secretary of State, R. S. Polley; Treasurer, George Johnson; Auditor, H. B. Anderson; Attorney-General, Royal C. Johnson; Superintendent of Education, C. G. Lawrence; Commissioner of Lands, F. F. Brinker; Commissioner of Insurance, O. S. Basford—all Republicans.

**SUPREME COURT.** Presiding Judge, Charles S. Whiting; Justices, Dick Haney, Elleson G. Smith, J. H. McCoy and Dighton Corson; Clerk, Frank Crane—all Republicans.

**STATE LEGISLATURE, 1911.** Senate, Republicans, 34; Democrats, 11. House, Republicans, 99; Democrats, 5. Joint ballot, Republicans, 133; Democrats, 16. Republican majority, Senate, 23; House, 94; joint ballot, 117.

**SOUTH, EDUCATION IN THE.** See **EDUCATION IN THE UNITED STATES.**

**SOUTHERN CONFERENCE ON WOMAN AND CHILD LABOR.** See **CHILD LABOR.**

**SOUTHERN NIGERIA.** A British colony and protectorate, formed by the union of Lagos and the old protectorate of Southern Nigeria (1906). Area, 77,260 square miles; approximate population, 6,000,000, largely Yorubas. Capital and chief port, Lagos (57,000 inhabitants). There are government and mission schools. The chief products and exports are mahogany, palm oil and kernels, rubber, cotton, cacao, coffee, gum copal, ivory, hides, nuts, fruits, etc. Manganese, galena, cassiterite, lignite, and monazite are present. Imports (1909), £4,529,604 (Great Britain, £3,788,509); exports, £4,114,237 (Great Britain, £2,003,238). Revenue, £1,361,891; expenditure, £1,648,680. A railway from Iddo Island via Ilorin to Jebba on the Niger (306 miles) is in operation; an extension is building through Zungeru (N. Nigeria) to join the Baro-Kano line. Length of telegraph lines, 1500 miles. Governor and commander-in-chief (1910), Sir Walter Egerton. Military operations which had been going on for some time past against a native secret society, known as the "Silent Ones," resulted in the surrender of a force of 200 in June.

**SOUTHAMPTON DOCKS.** See **DOCKS AND HARBORS.**

**SOUTH POLE.** See **POLAR RESEARCH**

**SPAIN.** A constitutional monarchy of western Europe. Capital, Madrid.

**AREA AND POPULATION.** Area of continental Spain, 190,050 sq. miles; with the Balearic and Canary Islands, and the possessions on the African coast (north), 194,794. Population (1900), 18,618,086; estimated Dec. 31, 1909, 20,068,381. Marriages (1909), 129,493; births, 650,690; deaths, 466,639; emigrants, 142,717; immigrants, 92,042. Madrid had (1900) 539,347 inhabitants; Barcelona, 530,344; Valencia, 163,425; Seville, 145,721; Malaga, 112,971; Saragoassa, 81,639; Cadiz, 65,161.

**EDUCATION AND RELIGION.** Primary education is mainly free and nominally compulsory. Many private schools are under clerical control; and a large proportion of the population are illiterate. There are some 32,000 schools, with about 2,350,000 pupils. The secondary institutions are insufficient. There are nine universities.

The Roman Catholic is the State religion, and the public observance of any other form of worship was prohibited till June, 1910, when a royal decree was issued permitting dissident congregations to distinguish their places of worship by emblems or letterings. There are 3253 religious associations, with 50,670 members (40,040 women). Of the total expenditure

(aside from the service of the debt), it is estimated that one-tenth, or over 41,000,000 pesetas annually, goes to the support of the church. Under this burden, and with the continual encroachment of church privilege, popular discontent has steadily grown, till the anti-clerical movement has become a serious factor in the politics of the day.

**AGRICULTURE.** Of the total area, 79.65 per cent. is productive; of this, 33.8 per cent. is under crops and gardens, 3.7 under vineyards, 1.6 under olives, 19.7 under pasture, 20.8 under fruits. The area under principal crops and the yield are given as follows for two years:

	1000 acres		1000 bushels	
	1909	1910	1909	1910
Wheat .....	9,347	9,598	144,105	187,236

a Yield in 1000 gals. b Yield in 1000 tons.  
c Yield in 1000 lbs.

Other agricultural products are esparto grass, flax, hemp, pulse, almonds and other nuts, and fruits. Livestock (1908): 445,776 horses, 1,622,282 mules and asses, 2,452,197 cattle, 16,119,051 sheep, 3,355,404 goats, 2,120,177 swine. Silk culture is carried on in several provinces. Spain is a sparsely timbered country, and imports quantities of lumber.

**MINING.** Spain abounds in iron, copper, lead, and other minerals; its resources are only partially exploited and chiefly by foreign capital under foreign management. Strikes were prevalent in 1910. The coal output increased from 1,730,000 metric tons in 1895 to 3,690,000 in 1908. The estimated consumption in 1908 was 5,638,000 tons, the deficiency being made up by imports, largely from Great Britain. Other mining products are iron, 9,896,176 metric tons in 1907; copper, 3,182,645; iron pyrites, 225,950; zinc, 191,853; argentiferous lead, 165,289; lead, 113,632; manganese, 41,504; mercury, 28,789; sulphur, 27,045; phosphorite, 3547; silver, 672; tin, 315; salt, 605,895.

**OTHER INDUSTRIES.** The manufactories of cotton textiles employ about 68,300 looms, with 2,614,500 spindles; of woollens, 8800, with 662,000. There are 144 paper mills and 34 glass-factories. The cork manufactories produce about 30,000 tons annually.

The fisheries employ about 14,700 boats and 67,000 men; value of annual catch (mostly sardines, tunny fish, and cod), about 38,000,000 pesetas.

**COMMERCE.** The special trade is shown for three years in pesetas:

	1907	1908	1909
Imports ..	947,813,634	981,625,369	951,021,647
Exports ..	943,550,526	896,342,677	926,078,722

Details of the trade for 1909 are reported as follows in thousands of pesetas:

Classes	Imports	Exports
Foodstuffs, beverages, etc.....	158,083	320,846
Drugs and chemical products....	123,231	36,162
Cotton and cotton manufactures..	121,540	64,922
Machinery, etc.....	119,868	3,394
Minerals and ceramics.....	107,314	170,224
Animals and animal products....	78,895	56,365
Metals and metal manufactures..	56,979	153,957

The principal countries of origin and destination, with the value of their trade in 1908, were: Great Britain, imports and exports, 196,195,000 and 268,886,000 pesetas respectively; France, 142,762,000 and 157,653,000; United States, 138,513,000 and 41,065,000; Germany, 104,916,000 and 53,637,000; Portugal, 47,855,000 and 41,654,000; Belgium, 27,322,000 and 27,176,000; Argentina, 26,425,000 and 49,339,000. Vessels entered (1908), 19,588, of 18,673,034 tons (10,517, of 6,988,613 tons Spanish); cleared, 17,728, of 19,129,029 tons (534, of 7,043,909 tons Spanish).

Railways in operation January 1, 1910, 14,596 kilometres (9069 miles). Telegraph lines (1908), 36,158 kilometres; wires, 80,927; offices 1735. Post-offices, 4845.

FINANCE. The peseta, the monetary unit, is valued at 19.3 cents. The revenue and expenditure for three years are given in pesetas:

	1907	1908	1909
Rev. ...	1,079,830,297	1,072,126,621	1,065,569,995
Exp. ...	1,009,443,561	1,025,888,290	1,100,932,925

a Including 53,799,594 pesetas for military operations at Melilla.

The total of the public debt stood January 1, 1909, at 9,431,625,572 pesetas. Against its total obligations the government held credit balances at the Bank of Spain amounting at the end of 1909 to 129,157,482 pesetas. The conversions of the peseta were made at the nominal rate of 19.3 cents; the average exchange value in 1909 was 17.5 cents.

The budget for 1910 is seen below, in thousands of pesetas; totals, 1,090,757,427 and 1,048,886,064:

Revenue	1000 p.	Exp.	1000 p.
Direct taxes....	466,938	Debt.....	407,857
Indirect taxes:		War.....	164,070

ARMY. The law of December 26, 1907, governs the organization of the army which is restricted to an effective strength of 80,000 which at certain times of the year can be increased by the Minister of War to 100,000, if corresponding reductions are made at other times to compensate for the extra expense. Thus there is maintained for the second battalions of infantry regiments and the fourth squadron of cavalry regiments only a skeleton organization. Service is obligatory but there are numerous exceptions and in 1910 the contingent amounted to 127,029 men of whom 75,000 were embodied. Three years are spent in the active army; three in the first reserve, and six in the second reserve. The military estimates of 1910 gave the establishment as 80,000 officers and men, of which 45,000 were infantry, 12,600 cavalry, and 13,000 artillery, these figures including the garrisons of Ceuta, Melilla, Minorca, and the Canaries. There are eight captain-generalcies with headquarters at Madrid, Seville, Valencia, Barcelona, Saragossa, Burgos, Valladolid, and Coruña, respectively. There are 14 divisions to the army and the organization was as follows: Infantry, 59 regiments; chasseurs, 20 battalions; 4 African regiments, 2 regiments in Balearic Islands, 2 regiments in Canary Islands, recruiting cadres, etc. Cavalry, 28 regiments and 3 squadrons for foreign possessions. Artillery, 13 field, 1 siege and 3 mountain batteries, each with 6 guns, 14 fortress battalions, 1 central gunnery school, 1 central remount committee and 4 companies of artificers. There were 4 regiments of sappers and miners, 1 pontoon regiment, 1 telegraph battalion, 1 topographical brigade, 1 company of artificers and 8 reserve depots, with 5 separate companies of sappers and miners for the Balearic Islands. The new artillery armament of 1909 had been tested at Melilla, and the Schneider 12-pounders were distributed throughout the artillery. During the year the African garrison was reorganized and a number of changes in the high commands were made. The war estimates of 1910 sanctioned amounted to 164,070,402 pesetas, which included some special charges for Ceuta and Melilla, though the cost of operations in North Africa was borne as a special credit. The effective strength of the permanent army for 1911 was fixed at 115,432 men by the law of December 7, 1910.

NAVY. The navy was almost entirely de-

stroyed in the war with the United States, the only effective vessels being (1910) one second-class battleship of 9900 tons; 2 armored cruisers of 7000 tons each; one cruiser of 9240 tons; one of 6000; two coast-defense vessels of 7300 tons each; two cruisers of about 2000 tons each; four torpedo-boat destroyers; 13 gunboats; eight torpedo boats. There are three training ships, a royal yacht and some small craft. The scheme of reconstruction provides for three battleships each of 15,460 tons displacement; four gunboats, of 800 tons each; three destroyers (370), and 24 torpedo boats (180). Personnel, 16,700 of all ranks, and 9000 marines.

**GOVERNMENT.** The king is the executive, acting through a responsible council of ministers. The legislative power is vested in the Cortes, a body composed of a Senate of 360 members and a congress of deputies (404). The king (1910), Alfonso XIII., was born May 17, 1886; married, May 31, 1906, to Princess Victoria Eugénie Ena of Battenberg. Heir-apparent, the Prince of the Asturias, Don Alfonso, born May 10, 1907. The Ministry, as constituted February 9, 1910, was composed as follows: Premier, José Canalejas; Interior, Condé de Sagasta; Foreign Affairs, García Prieto; Justice, Ruiz Valarino; War, Lieutenant-General Aznar; Marine, Arias Miranda; Finance, E. Cobián; Instruction, J. Burell; Agriculture, Industry, Commerce, Public Works, F. Cabeltón.

### HISTORY

**MINISTERIAL CRISIS.** The Moret Ministry fell on February 2, as a result of dissensions in the Liberal party. The Premier had been reluctantly supported by the other Liberal leaders from the beginning. Finally, after a speech by the Count de Romanones, accusing him of making overtures to the Republican party, he resigned, saying that a portion of the Liberals were about to revolt. He was succeeded by Señor Canalejas, who represented the young Liberal group, and as this element was more radical than Señor Moret's followers, it was evident that the accusations of the Count de Romanones were merely pretexts. Señor Canalejas constituted the Ministry anew, aiming to give his party coherence and unity. As a result of the final election returns the strength of the parties in the Cortes was as follows: Ministerialists, 227; Conservatives, 105; Republicans, 42; Carlists, 9; Catalanists, 7; Integrists, 2; Independents, 9; doubtful, 3; total, 404. The Republicans gained three seats.

**TROUBLE WITH THE VATICAN.** Difficulty with the Vatican arose in June on account of a Royal Order granting to non-Catholic bodies the right to display the signs of their religion on the walls of their churches and in their notices. The Holy See immediately made a protest to the government. On the opening of the Cortes on June 14, the speech from the throne referred to the Pope and to certain measures for dealing with the excessive increase of religious orders. The words in the King's speech which gave offense to the Vatican were to the effect that the government would give expression to the public aspirations "for the reduction and control of the excessive number of orders and religious congregations without impairing their independence in spiritual matters." The government required prefects to enforce existing rules as to registration, and also entered into negotiations with Rome for the suppression of convents in dioceses

where they were not needed. It also promised a reform of the act of 1887. The Vatican made a formal protest against these measures. In the government's reply to the Vatican protest it adhered to its intention of granting more liberties to the Protestant churches. A mass meeting in which some 20,000 persons took part, organized by the Republican Socialist Union, was held in Madrid on July 3 in support of the government's religious policy. The Vatican in reply to certain criticisms that were made upon it denied that it held an obstinate and uncompromising attitude, but that it was willing to make concessions. A bill was introduced into the Spanish Senate to prohibit the formation of any new religious association until the settlement of the dispute with the Vatican. In July the Spanish government was informed by the Vatican that if negotiations were to continue, the government must repeal the measures it had taken in regard to religion. The Council and the Cabinet assembled, on July 30, decided that having tried to bring about an agreement for the reduction of religious orders it could not now abandon its duties. It also announced that it had recalled its ambassador at the Vatican.

King Alfonso left the country for a visit to England at the beginning of August employing the Prime Minister, Canalejas, to take the necessary measures for the settlement of the dispute with the Vatican. At the Vatican the situation was attributed to anti-Clericalism, at the bottom of which were anti-Monarchical forces aiming at a republic. The situation aroused much interest in foreign countries as an attempt to settle the same problem that France had encountered, but to do so by more moderate means. A Catholic demonstration was planned at Bilbao early in August, but was prevented by the authorities. It issued, however, a manifesto, condemning the arbitrary course of the government. Further anger was caused among the Clericals by the government's refusal to permit the Roman Catholic meeting at Bilbao, on September 25. In other parts of Spain the Roman Catholics continued the demonstrations against the government's religious policy toward the Vatican. There were meetings in Valencia and Saragossa where some disorders occurred. A large meeting, comprising, it is said, some 20,000 persons, took place at Pamplona, and there were also great mass meetings at San Sebastian, Vittoria and Granada.

**MOROCCO.** The long pending dispute with the Moorish government concerning the Spanish indemnity finally resulted in an agreement with the Moorish envoys that Morocco should pay to Spain an indemnity of 65,000,000 pesetas, with interest, for the cost of the Riff campaign. See MOROCCO.

**SPELLMEYER, HENRY.** A bishop of the Methodist Episcopal Church, died March 12, 1910. He was born in New York City in 1847, and graduated from New York University in 1866. He studied for the ministry in Union Theological Seminary, and for thirty-five years he was pastor in Newark, N. J., and the immediate vicinity. He was a member of the General

Conference in 1896, 1900, and 1904. In the last-named year he was elected bishop.

**SPELTER.** See LEAD.

**SPENCER, JOHN POYNTZ, Earl.** An English nobleman and public official, died August 13, 1910. He was born in 1835, son of the fourth Earl Spencer. He was educated at Harrow and Trinity College, Cambridge, where he took his degree in 1857. In the same year he succeeded to the earldom. He had previously for a short time been a member of the House of Commons. From 1859 to 1867 he occupied positions in the household of the Prince Consort and the Prince of Wales. In 1868 he was appointed Lord Lieutenant of Ireland and held this position until the resignation of the Gladstone Ministry, in February, 1874. After the Liberals returned to power in May, 1880, he was appointed Lord President of the Council. On the resignation of Earl Cowper in 1882, he was again nominated Lord Lieutenant of Ireland. While serving in this office he retained his place in the Cabinet and was the first ruler in Ireland who held a seat in the Cabinet. He made his entry into Dublin on May 6, the same night on which Lord Frederick Cavendish and Under-Secretary Thomas A. Burke were stabbed to death in Phoenix Park. He held office through the turbulent period of the "crimes act" and until 1885, when the Gladstone Ministry went out of office on the Home Rule issue. In 1883 he had resigned as Lord President of the Council, but he remained a member of the Cabinet until the close of the administration. He joined with Gladstone in support of the home rule issue and was an ardent supporter of the latter's policy. In 1892 he was appointed First Lord of the Admiralty and held that office for three years. From 1901 to 1907 he was Keeper of the Privy Seal of the Duke of Cornwall, an honorary title. Earl Spencer bore the degrees of D. C. L. and LL.D. From 1882 to 1907 he was Chancellor of Victoria University, England. Up to the time of his retirement from public life in 1905 he was one of the most influential men in English politics.

**SPIRITUALISTS' ASSOCIATION, NATIONAL.** An organization of various spiritualistic societies in the United States representing the developed force in the organizations of spiritualists. The Association holds annual conventions. The convention of 1910 was held in October. One State association was added during the year and many local societies were organized. The membership of the Association increased. The officials of the Association state that it includes 700 societies and churches, 1000 mediums and ministers, 400,000 members and 30 church edifices. The officers for 1911 are: George P. Warne, President; Charles R. Schirm, Vice-President; George W. Kates, Secretary, and Cassius L. Stevens, Treasurer. The convention in 1911 will be held in Wichita, Kansas, October 17-20.

**SPORTS.** All the important athletic events of the year 1910, both in the United States and

other countries, are treated in this work under separate titles such as ATHLETICS, TRACK and FIELD, BASEBALL, BOXING, CYCLING, FOOTBALL, GOLF, LAWN TENNIS, RACING, ROWING, etc.

**SPRAGUE, AUGUSTUS BROWN REED.** An American soldier, public official and banker, died May 17, 1910. He was born at Ware, Mass., in 1827 and received his education in public and private schools. He engaged in mercantile pursuits up to the time of the Civil War. He served throughout the war as Captain, Lieutenant-Colonel and Colonel of the Massachusetts Volunteers. He was brevetted Brigadier-General for gallant and meritorious service during the war. From 1867 to 1872 he was United States collector of internal revenue for the 8th Massachusetts District. From 1871 to 1890 he was sheriff of Worcester county, and from 1896 to 1897 was mayor of Worcester. He engaged in banking and from 1900 to the time of his death was president of the Worcester Mechanics' Savings Bank.

**STANDARD OIL.** In November, 1909, the United States Circuit Court in an opinion given at St. Paul, Minn., and written by Justice Sanborn, declared the Standard Oil Company of New Jersey, J. D. Rockefeller, William Rockefeller, H. M. Hagler, H. H. Rogers, J. D. Archbold, O. H. Paine and Charles M. Pratt, and thirty-six subsidiary companies, a combination in restraint of trade and therefore illegal under the Sherman Act. The Court felt that these parties constituted not only a combination in violation of section one of the Sherman Act but also a monopoly in the violation of section two of that law. Therefore, the court ordered the dissolution of the combination and issued a very broad injunction against the formation of any similar combination. On December 17, an appeal alleging sixty-five errors was filed, thus taking the case to the United States Supreme Court. The case was argued in March. The lawyers for the defense argued that, although the Standard Oil Company included many corporations with various businesses, it is not a combination of hitherto competing corporations but is the final result of more than forty years growth of a single business. They declared that the seven personal defendants, very early in the development of the industry of petroleum refining and sale, had united their forces, and by great skill, enterprise, and untiring energy, together with increasing capital, expanded their business through a great number of subsidiary companies into the complex organization of a world-wide corporation. These men created many new and valuable by-products; they invented methods of storing and shipping oil; they pushed the sale of their products into the remotest corners of the earth and devised new methods of getting and holding the business among many different nationalities. It was argued that, in order to handle this increasing and complex business, they found it advantageous to organize new corporations for the immediate control of special undertakings. The control of all of these, however, always remained in the same hands, therefore, these are only subsidiary companies, convenient agencies; they never were competing corporations and, therefore, could not combine to restrain trade. Consequently the placing of

the control of all of these numerous companies under the Standard Oil Company of New Jersey was merely the best method of unifying under the corporation form the same control which the seven pioneers had held continuously.

The defense argued that whether illegal business methods had at any time been followed by these men or their agents was not pertinent to the present suit, this question having been set aside by the Circuit Court. Moreover it was declared by the lawyers for the defense that the Standard is a private commercial enterprise, not a public service corporation, and therefore may sell and buy with whom it pleases and at any prices, however different. It could also lawfully compete and monopolize all the inter-state products of petroleum and its products. It could lawfully do any of those things which competitors had been accustomed to do in fierce and unrelenting trade wars. It could thus lower prices to drive out competitors and raise them afterwards; it could give away oil for a like purpose; it could buy out a competitor or take him into partnership and it "could use all the shifts and devices of traders to succeed, except that we could not by unlawful fraudulent means deprive any competitor of his equal lawful right to fight for the trade." Consequently the defense held that the decree of the Circuit Court sought to make companies that are only subsidiary agencies become independent and competing concerns; the decree did not seek to restore to independence companies that had combined, for independence had never existed.

The government in the presentation of its case argued that Mr. Rockefeller and his associates very early in the development of this business sought to establish a monopoly by obtaining from the railways profitable rebates and unfair contracts which enabled them to crush out many competitors. As a result of this same fierce competition they forced many other competitors to sell out and allow their plants to be dismantled. The government argued that, during the ten years preceding 1882, the defendants had bought out many competing concerns under such circumstances as indicated that the primary object sought was the depression of competition. For this reason it was held that the trust agreements of 1879 and 1882 were combinations in restraint of trade, for they tended to create a monopoly and were therefore illegal under the common law. This was true also of the Standard Oil Company of New Jersey, which was virtually the same as the previous trust except in name. As this combination persisted it became illegal after the passage of the Sherman Act in 1890. Again it was argued by the government that the decisions of the Supreme Court contain no basis for contentions that ownership of the stock of competing companies is invalid for railways but valid for trading and manufacturing companies. Not only does the Standard Oil Company violate section one of the Sherman Act which forbids combinations in restraint of trade, but it violates section two by monopolizing and attempting to monopolize the trade in petroleum and its products. It has extended its monopoly power by unfair methods: by price discrimination in local competition; by obtaining secret information, largely through the bribery of railway employees; and by forming bogus independent concerns principally to drive out competitors. The government attorneys stated

that they did not wish to appear to discourage enterprise in business; they were only contending against the creation of a monopoly by methods that make impossible the existence of independent concerns.

Shortly after the case was argued the court decided to postpone the decision and asked that the case be re-argued. This postponement was due in part to the death of Justice Brewer, the illness of Justice Moody and the recentness of the appointment of Justice Lurton; but it may also have indicated that the other six members of the court were not agreed as to the opinion which should be rendered, and on account of the importance of the case felt that at least five members should be in accord in the final decision. The case was to be reargued in January, 1911.

Besides a number of prosecutions by the State authorities, the United States government carried through an important suit against the Standard Oil Company of Indiana for violating the railway anti-rebate law. The company was originally indicted on 1524 counts for rebates on shipments from Whiting, Indiana, to Grand Junction and points beyond. On November 15, Judge McCall of the Federal Circuit Court at Jackson, Tenn., ruled that each settlement with the railway company, rather than each individual shipment of oil, constituted an offense. This reduced the number of counts to forty-six, involving a possible maximum fine of \$920,000. On the 17th, he instructed the jury to give a verdict of not guilty. The court held that the rate which the company had paid to points beyond Grand Junction was the legally filed rate.

The Vacuum Oil Company, an American organization generally understood to be a subsidiary of the Standard and engaged in the refinement of oil in Austria, was the cause of diplomatic negotiations in November and December. This company alleged that the Austrian government was treating it unfairly, with the result that it was forced to close its refineries. A special commercial adviser of the State Department at Washington proceeded to Vienna to bring about an adjustment. His efforts were furthered by a protest of the producers of crude oil who, fearing the loss of their largest customer, petitioned the government to withdraw its repressive measures against the American company. Late in December it was announced that this would be done.

**STANLEY, W. E.** An American public official, former governor of Kansas, died October 13, 1910. He was born in Ohio in 1848 and spent his boyhood in that State. In 1870 he removed to Jefferson county, Kansas, and in 1872 to Wichita. He was admitted to the bar in 1870 and in 1871-2 was county attorney for Jefferson county. From 1874 to 1880 he was county attorney for Sedgwick county. He declined an appointment to the Supreme Bench of the State. From 1889 to 1903 he was governor of the State. He was a member of the Commission to the Five Civilized Tribes in 1903-4.

**STANTON, THEODORE.** See. LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**STARS.** See ASTRONOMY.

**STATE BANK.** The report of the Comptroller of the Currency summarized the condition of 12,166 State Banks on June 30, 1910. They had \$435,822,000 capital and \$3,694,958,000 in aggregate resources. Their loans and discounts were \$2,406,466,000; bonds and other securities, \$303,

624,000; cash on hand, \$240,581,000; surplus and undivided profits, \$253,240,000; compared with 1909 there was an increase of \$261,000,000 in deposits. These banks were located as follows: New England States, 19; Eastern States, 476; Southern States, 3328; Middle Western States, 3924; Western States 3433; Pacific States, 958; Island possessions, 28. There were 1038 such banks in Missouri; 828 in Kansas; 680 in Oklahoma; 648 in Nebraska, and 632 in Minnesota. Kansas, Texas, Oklahoma, and Nebraska have State laws guaranteeing the deposits in State banks. The aggregate interest paid by State banks on deposits was \$31,786,000. They paid 2.62 per cent. on deposits subject to check; and 3.71 per cent. on savings deposits. They received 7.73 per cent. on time loans and 7.49 per cent. on demand loans.

*Bradstreet's* reported 19 State bank suspensions for the year, with liabilities of \$17,996,000 and assets of \$15,508,000. Since 1893 these liabilities have been exceeded only in 1907 and 1908 and have not been approached in any other year. The number of failures, however, has been greater in most years. Statistics collected by Professor George E. Barnett, and published by the National Monetary Commission, showed that the rate of failure is no higher for State than for National banks, though the latter pay a larger percentage of claims. This report attributed the growth of State banks to their more liberal regulations regarding loans and reserves than those enjoyed by National banks.

For the guaranty of deposits in State banks, see paragraphs under BANKS AND BANKING.

**STEAM AND SAILING TONNAGE.** See SHIPPING.

**STEAM ENGINES.** During the year 1910 there was no notable advance in either the design or the size of reciprocating steam engines. Engineers, especially in Europe, were working along two separate lines of improvement, valve gears, and the use of superheated steam. It is especially in the latter that the greatest advance has been made. While economic conditions and the high price of fuel seem to be the impelling forces toward higher economy in Europe, yet it is to be regretted that not more attention is bestowed upon the subject in the United States, where in at least two instances locomotive designers favor the use of superheated steam, and have not hesitated to put their theories into practice.

**TURBINES.** To an increasing extent in competition with reciprocating steam engines, turbines have come into use even more rapidly than was noticeable in 1909; and for central station power plants are now standard practice. The size of the units continues to increase, and the largest thus far built, for the Commonwealth Edison Company of Chicago, is to drive a 20,000 kilowatt electric generator. (See DYNAMO ELECTRIC MACHINERY.) This machine is a five-stage Curtis turbine, taking steam at 135 pounds per square inch pressure, and will be operated condensing. Some engine builders, especially in Germany, have obtained good results by using two types of turbines in one machine: Curtis wheels in the high pressure part, utilizing one-third of the available energy of the steam, and Rateau wheels in the low pressure part, utilizing

two-thirds. In general, for stationary purposes, the Curtis turbine is considered superior, particularly in small sizes, as regards heat economy and low first cost; while in large sizes the Rateau system, especially in the low pressure part, gives a better heat economy.

**LOW PRESSURE TURBINES.** An increasing field of usefulness of the low pressure turbine, using exhaust steam, is in those plants where the fullest utilization of the heat energy in the steam has not been secured; and some recent tests have shown that the advantage to be gained by the addition of a low pressure turbine to reciprocating engines by taking their exhaust steam, is largely a question of the load-factor of the installation. Where this is greater than 35 per cent., a distinct gain results from adding a turbine, as was demonstrated at the 59th Street station of the Interborough Rapid Transit Company, New York. In that instance, the economy effected amounted to 25 per cent. For this kind of service it is customary to run an auxiliary live steam pipe, with a reducing valve in it, to the turbine, in order to obtain maximum output in times of the heaviest load on the station. The economy achieved by this use of low-pressure steam turbines for large power installations to utilize the exhaust steam, over reciprocating engines, first made prominent in 1907, had become generally appreciated during 1910, and it seemed likely that low pressure steam turbines would be employed in plants where steam hammers, rolling mill engines and other high pressure engines are employed, to utilize on exhaust steam.

**ROTARY ENGINES.** During the year several rotary engines were given laboratory tests which seemed to indicate their possibilities. A 20 horsepower Herriek rotary engine when tested at Stevens Institute developed a 20-40 brake horsepower on a consumption of 44-24 pounds of water per hour, while a similar engine of 100 horsepower operating with dry steam at 130 pounds pressure at the throttle was able to develop a brake horsepower of 128 with a consumption of water per hour of 32.4 pounds. Comparable with these records were those made by a Harriman rotary engine which developed 25.72 brake horsepower with a consumption of 31.02 pounds of steam per brake horsepower per hour.

In England, a rotary engine, invented by Messrs. Cherry and Bush, was brought out and has already attracted attention by its simplicity and economical use of steam. It consists of a rotor or drum in a concentric cylindrical chamber. The rotor is slotted for holding two vanes at diametrically opposite points on its rim. On both inner faces of the chamber or case are ring cams which engage with slots in the rotating vanes so that as the rotor turns, the vanes are drawn inward in order to pass the seal, and then pushed out again to take the steam pressure. The rotor is mounted on a shaft passing through stuffing boxes in either side of the case. The engine operates by virtue of the pressure of the steam, whereas a turbine works by reason of the velocity. The high efficiency claimed for the Cherry-Bush engine was obtained on test of one having a drum or cylinder  $4\frac{1}{4}$  inches in diameter and 29-16 inches wide, weighing 22 pounds. With steam at 87 pounds pressure it made 665 revolutions per minute, with an indicated horsepower of 2.02 and a brake horsepower equal to 2.01.

**SHIP PROPULSION.** There was a steady increase in the use of turbine engines for ship propulsion, and in a few vessels reciprocating engines with exhaust steam turbines were installed. In the navies of the world, turbines may be said to have become the standard, almost displacing engines of the reciprocating type. Some excellent results were obtained recently with Brown-Curtiss turbines on H. M. S. *Bristol*, which on her trial trip attained a speed of 26.84 knots an hour. On a 22 hour run, the speed was 24.06 knots, and 14,300 horsepower was developed on each shaft.

What is in the opinion of some marine engineers a backward step is the recently announced determination to install reciprocating engines in the new battleship *Texas* of the United States Navy; the reason given being that this type of engine is more economical than the turbine at cruising speeds. Whether the coal economy secured under the latter conditions will have been attained at the sacrifice of speed and general efficiency in time of war remains to be determined by the test of experience.

**STEBBING, E. P.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**STEBBINS, ROSWELL OTIS.** An American dentist and explorer, died May 24, 1910. He was born in Wetunka, Ala., 1855, and was educated in the schools of Willimantic, Conn., and at the New College of Dentistry. Besides keeping up active practice in his profession he early became interested in travel. In 1878 he explored the south fork of King's River in the Sierra Nevada mountains, and did considerable work along the same lines in Central America and Alaska. In 1894 he accompanied Dr. Frederick A. Cook to Greenland for the purpose of studying the teeth of the Esquimaux and he brought back many plaster of paris casts which he added to the collections in the United States National Medical Museum.

**STEDMAN, LAURA.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**STEELE, ROBERT WILBUR.** An American jurist, Chief Justice of the Supreme Court of Colorado, died October 12, 1910. He was born in Lebanon, Ohio, in 1857. His education was obtained from public schools, and in 1878-9 he studied in the law department of Columbian University. In 1881 he was admitted to the bar. From 1881 to 1885 he was clerk of the county court of Arapahoe county, Colorado. From 1892-95 he was district attorney of the second judicial district of Colorado. He was judge of Arapahoe county from 1895 to 1901. In the latter year he was made justice of the Supreme Court of the State. He was made Chief Justice in 1907.

**STEEVENS, WILLIAM ARNOLD.** An American philologist and biblical scholar, died January 2, 1910. He was born at Granville, O., in 1839, and graduated from Denison University in 1862. He studied later at the Rochester Theological Seminary and at the universities

of Harvard, Leipzig and Berlin. For thirty years prior to his death he occupied the chair of New Testament interpretation in the Rochester Theological Seminary. He was well known as a writer on philological and biblical subjects. Among his published works are the following: *Select Orations by Lysias*; *Commentary on the Epistles to the Thessalonians*; *Outline Handbook of the Life of Christ* (with Ernest D. Burton); *Harmony of the Gospels for Historical Study* (with Ernest D. Burton), and *Life of the Apostle Paul*.

**STEVENS, JOHN AUSTIN.** An American author, died June 16, 1910. He was born in New York City in 1827, and graduated from Harvard College in 1846. He engaged in business in New York City, and from 1862 to 1868, was secretary of the New York Chamber of Commerce. He was also secretary of the Treasury Note Company, and was later librarian of the New York Historical Society. He founded and was for many years the editor of the *Magazine of American History*, and he founded and was the first president of the Society of the Sons of the Revolution and the Loyal National League. His interest in historical research led him to write a number of works dealing with incidents in the life of the country. Best known of these are his compilation of the *Colonial Records of the New York Chamber of Commerce from 1768 to 1783*, his account of the centennial celebration of the same body in 1868, *Memoir of George Gibbs, Resumption of Specie Payment, The Burgoyne Campaign* (1877), *The Expedition of Lafayette against Arnold, The French in Rhode Island* (1878-81), *The Life of Albert Gallatin* (1902), *The Physical Evolution of New York City in a Hundred Years, 1807-1907*, (1907), and *The Duke de Lauzun in France and America* (1907).

**STEVENSON, PAUL EVE.** An American writer, died December 20, 1910. He was born in New York City in 1868 and graduated from Columbia University in 1890. He was for a time connected with the commercial department of a ship designing firm. He was a lover of seafaring, and made several long voyages on sailing ships. He was the author of *A Deep Sea Voyage, By Way of Cape Horn, and The Race for the Emperor's Cup*.

**STEWART, B.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**STOCK EXCHANGE.** See FINANCIAL REVIEW.

**STOCK-RAISING. THE MARKET SUPPLY.** The high prices of feedstuffs for several years, and the consequent excessive marketing of livestock, caused a shortage of meat-producing animals on farms and ranches at the close of 1910. But there was no decrease in the number of slaughtered animals except in hogs. Cattle receipts at the five principal western markets in 1910 totaled about 8,350,000, or 100,000 more than in 1909. Sheep receipts aggregated 11,350,000, or 172,000 more than the previous year.

Hogs on the other hand decreased in numbers by about 3,000,000; the total number slaughtered was about 13,100,000. Kansas City showed the heaviest decrease. Both Chicago and Omaha made gains in sheep and cattle. As a result the prices of pork have been abnormally high. Strong prices have also ruled for horses and for good breeding animals in all classes of livestock. Many western ranges have been nearly depleted of cattle and the outlook at the close of the year was for high prices in the future, but the beef will be of higher quality, as inferior stock has gone to the shambles. Beef in the future will be more largely produced on smaller ranches and high-priced lands of the central West. There are many indications that the South may become an important source of the beef supply. Investigations in beef production in Alabama, which have been in progress for six years, indicate that with the eradication of the cattle tick stock-raising is likely to become an extensive and profitable business throughout the Southern States.

CANADA. As compared with 1909 the following changes have taken place in livestock statistics in Canada: The number of horses has increased by 3.31 per cent., milch cows 1.13 per cent., swine 2.11 per cent., and poultry 8.02 per cent.; but there has been a decrease of 1.55 per cent. in the number of sheep, and of 2.2 per cent. in cattle other than milch cows.

GREAT BRITAIN. In Great Britain there has been a slight decrease in horses and a large decrease in the number of sheep, though in some countries in England where long-wooled bucks are kept there has been a slight increase of sheep. There was a decrease in the number of cows, heifers and calves, but in England an increase in other cattle. The number of pigs in Scotland increased slightly, but in England and Wales there was a decrease in swine other than brood sows. These fluctuations in Canada and Great Britain are due to the rise in meat prices, and are dependent to a large extent upon the change which has recently taken place in the livestock situation in the United States. This influence has also extended to France, Germany, and other countries of central Europe and steps have been taken to encourage livestock production.

SWITZERLAND. In Switzerland, for instance, the annual government appropriation is £16,000 to encourage the cattle industry, and £8000 for horse breeding. According to the figures of the Swiss Peasants' Union 33.27 per cent. of the income of the Swiss peasant is derived from the sale of milk and its products, 20.41 per cent. from slaughtered cattle, 13.53 per cent. from other cattle, and 7.32 per cent. from pork.

The livestock industry in European and Asiatic Russia is assuming enormous proportions, and the annual increase is destined to continue for many years, as there are large areas which are capable of maintaining herds of livestock on which few or no animals are now kept. According to the latest official figures there were in the Russian Empire 28,723,000 horses, 42,031,000 cattle, 57,466,000 sheep and goats, and 12,436,000 pigs.

AUSTRALIA. At the close of the last fiscal year (June 30, 1910) the livestock in the Commonwealth of Australia showed increases as compared with the close of the previous year of 4,624,615 sheep, 491,209 cattle, 95,160 horses, and of 68,143 pigs, the total now

being 2,022,322 horses, 11,038,888 cattle, 91,667,881 sheep, and 763,832 pigs.

FORMOSA. Recent statistics of livestock in Formosa are of interest as showing the kinds of animals kept there. A recent report states that at present there are 162,985 Formosan oxen, 295,474 water buffalo, 1,268,261 hogs, 142,568 goats, 153 horses, 1007 European oxen, and 556 milch cows.

BREEDING—REGISTRATION, ETC. The herd of zebus imported from India to Texas in 1906 and bred to Hereford and grade stock, has given satisfactory results. The crossbred offspring have been kept in tick-infected pastures, and have inherited the immunity to Texas fever of the original stock. The Secretary of Agriculture has issued new regulations, to become effective after January 1, 1911, governing the certification of recognized breeds and pure-bred animals imported to the United States for breeding purposes, as these animals are imported free. Hereafter registered certificates of the foreign herd books will be required instead of the certificate of American herd books as has been the custom. The growing demand for well-bred horses, in spite of the abundance of grades, scrubs, and inferior stock, has led to various means for the improvement of American-bred horses. One of the most efficient means for that purpose has been the enactment of State stallion registration laws. The movement was started in Wisconsin, where under the influence of the station officials a law was passed in 1905 by which unsound and unfit stallions were barred from public service. The law was also designed to prevent fraud concerning the age, breeding, and other qualities. Since the law was passed the number of horses in that State has increased by 66,068 head, and their average value has increased \$15.35 per head. This increase was due, at least in part, to the influence of the stallion law. Since 1906 many other States have followed the lead of Wisconsin and have enacted similar laws. In August a National Association of Stallion Registration Boards was organized in order to cooperate in this matter. In December the American Suffolk Horse Association decided to incorporate, as the organization had hitherto been purely voluntary. Success has rewarded the efforts of the United States Army to improve the supply of horses by purchasing horses and mules unbroken and breaking them while at special remount stations. This has reduced the first cost of the stock and will increase the average length of life by accustoming the animals to army rations at an early age. They are also more efficient and reliable when broken to army ways when young. A plan has been proposed to have the United States government purchase stallions and breed army horses in cooperation with the Department of Agriculture.

The union of the Southwest Poland-China Record and the American Poland-China Record associations was a change which is destined to promote the interests of breeders of pure-bred swine.

IMPROVED METHOD OF TRANSPORTATION. A much-needed improvement in the transportation of livestock was brought about when the Pennsylvania Railroad adopted a new and improved type of stock car, which is so constructed as to insure greater comfort to the cattle during transport, and to reduce the number of damage claims the railroads are called upon to settle.

An association of feed control officials was organized during the year. The object of this association is to promote uniformity in State legislation relating to the manufacture, sale, and distribution of commercial feedstuffs. The membership consists of the State and Federal officials who are charged by law with the examination of these products or the execution of laws relating to their sale.

**SHEEP-RAISING.** The *Annual Wool Review* places the number of sheep in the United States fit for shearing on April 1, 1910, at 41,999,500, a decrease of 293,705 from 1909. The decrease has occurred in the far Western States, as there was an actual gain in the New England, Eastern and middle Western States. The year has been an unfavorable one for both wool growers and wool manufacturers in the United States. The total wool production, including pulled wool, was 321,362,750 pounds, or 6,747,999 pounds less than in 1909. The total value of the product was estimated at \$72,489,838. The tendency from fine to coarse wools continued to affect the wool growers, but to a less extent than in some former years. The conditions of the sheep and wool industry in this country have been reflected to some extent in Australia and Argentina, though to a less degree, as in those countries there are still new ranges to be taken up. There are also opportunities for growth in Africa and in Asia.

The total imports of wool showed a decrease in Class I and an increase in Classes II and III. There were 106,713,750 pounds of Class I imported during the fiscal year ending June 30, 1910, as against 138,143,968 pounds in 1909. Of this amount 68,094,059 pounds came from Australasia, a decrease of 11,322,717 pounds; 27,331,168 pounds from Argentina, a decrease of 23,270,252 pounds, and 8,768,627 pounds from Uruguay, an increase of 3,008,775 pounds. The gross imports of wool amounted to 263,939,584 pounds. The wool clip in Australia was above the average. According to the review of Dalgety & Co., the flocks in Australia and New Zealand increased during the year by 6,179,614 head, the total now being 115,525,581 head, a higher number than at any period for sixteen years. The sheep have improved in quality as well as in numbers. The oversea shipments amounted to 1,921,705 bales from Australia, and 512,938 bales from New Zealand, an increase of 146,539 bales. The total weight of the shipments was 816,881,665 pounds, valued at £33,128,496.

The prices for all grades ruled high and at a very uniform level throughout the year. The character of the clip was due to careful breeding and attention to the flocks. The Vermont blood, introduced a few years ago to thicken the fleece, has had its effect, while the accompanying evils of shortness of staple and excess of grease have been bred out. Australia has now become the principle wool producing country of the world, and manufacturers of other countries are sending buyers to Australia instead of London in order to secure a satisfactory share of the Australian clip. Sheep breeders of South Africa, Argentina, and Uruguay are buying stud sheep in Australia. Wool producers in other countries are following Australian methods of preparing the clip for market.

Wool production decreased in Argentina by about 20 per cent. in 1910, but increased in

Uruguay and South Africa. In Russia large estates upon which large herds of sheep were kept are being cut up into small holdings and for several years there has been a steady reduction in the number of sheep. The Japanese government is attempting to build up the sheep industry and the past year has sent a special envoy to the United States to collect information on the best methods of handling sheep and to interest American flock owners in the possibilities of Japan as a purchaser of foundation stock. African woolless sheep have been imported to Porto Rico to encourage the production of mutton. Peru has recently taken some interest in the sheep industry and sheep have been imported from Patagonia for cross-breeding.

The presence of twine and vegetable fibres in wool has been the cause of considerable loss. During the past twelve months there has been a noticeable improvement in the packing of wools offered in the London market. Processes have been invented which prevent the twine used in packing from entering the wool. In the United States some twines made of paper have recently been secured which do not injure the wool, as they are non-fibrous and if particles fall off in the wool they are easily dissolved.

Among the principal books on livestock published during the year were the following: Wilson, *Evolution of British Cattle*; Macdonald and Sinclair, *History of Hereford Cattle*; Oettinger, *Horsebreeding in Theory and Practice*; Jordan, *The Gait of the American Trotter and Pacer*; Wright, *Wool Growing and the Tariff*; Dietrich, *Swine*; Ellenberger and Scheunert, *Lehrbuch der vergleichenden Physiologie der Haussäugetiere*; Henry, revised edition of *Feeds and Feeding*.

**STONE, CHARLES FRANCIS.** An American jurist, died July 25, 1910. He was born at Cabot, N. H., in 1843, and graduated at Middlebury College in 1869. He was admitted to the bar in 1872 and began the practice of law at Laconia. He took an active interest in politics and was chairman of the Democratic State Committee from 1882 to 1890. In 1883-4 and 1887-8 he was a member of the State legislature. He was a candidate for Congress in 1892. From 1894 to 1898 he was naval officer of the port of Boston and was Democratic candidate for governor of New Hampshire in 1898. He received the full party vote for the United States Senate in the legislature of 1898-99. In 1901 he was appointed judge of the superior court of New Hampshire.

**STORAGE BATTERIES.** See ELECTRIC STORAGE BATTERIES.

**STOVAIN.** See ANÆSTHESIA.

**STRAITS SETTLEMENTS.** A British crown colony in Malaysia, composed as shown in table at top of next page (area in square miles, population 1901).

Chinese and Malays form the bulk of the population. The city of Singapore is the capital of the colony; it is a port of call and is strongly defended. There were in 1908 215

	Area	Pop	Capital
Singapore .....	206	228,555	Singapore
Penang .....	107	128,830	Georgetown
Malacca .....	659	95,487	Malacca
Province Wellesley..	288	115,264	Georgetown
The Dindings .....	260	4,113	Lumut
Labuan .....	31	8,286	Victoria
Christmas Island....	56	12,000	Singapore
Cocos Islands.....	9	700	Singapore
Total .....	1,646	572,249	

schools of all kinds, with 23,248 pupils. The products and exports are shown in the details of trade below. The total foreign trade for three years is given in Straits Settlements dollars (1 dollar = 56.7758½ cents), the inter-settlement trade being given separately:

	1907	1908	1909
Imports .....	350,570,202	316,395,939	313,358,427
Int. settlement	13,921,580	14,889,118	14,500,548
Exports .....	305,301,907	273,818,124	281,183,021
Int. settlement	14,263,644	13,979,316	13,073,446

The aggregate trade (including inter-settlement) of the separate settlements in 1908 was as follows: Singapore, 422,071,477 dollars (tin export 33,477,542); Penang, 185,882,347 (tin export, 38,255,694); Malacca, 8,853,068 (tapioca export, 1,473,423); Labuan, 2,275,605. The principal articles of the total foreign trade, with value in thousands of pounds sterling, are given for 1908:

Imports	1000 £	Exports	1000 £
Rice .....	4,348	Tin .....	8,369
Cottons .....	1,374	Spices .....	1,524
Opium .....	1,069	Gums .....	1,463
Fish .....	913	Copra .....	1,073
Coal .....	876	Gambier .....	528
Tobacco .....	748	Rattans .....	457
Sugar .....	574	Hides .....	333
Machinery .....	554	Pineapples .....	310
Petroleum .....	365	Tapioca .....	313

Merchant vessels entered (1908), 9257, of 10,891,954 tons; native craft, 17,747, of 723,536. Merchant vessels cleared, 9238, of 10,858,291 tons; native craft, 17,882, of 731,900. A railway connects Singapore with Kranji, whence ferries are run to Johore. The Perak State Railway runs from Parit Buntar in Krian to Kwala Prai in Province Wellesley, whence ferries connect with Penang; and a line extends from Malacca to Tampin in Negri Sembilan. These lines connect with the Federated Malay States Railway system. Total railway Mileage, 567. Revenue (1908), 8,969,015 dollars; expenditure, 9,837,624. Debt, December 31, 1908, 3,000,000 dollars. Governor and commander-in-chief (1910), Sir John Anderson. Resident councillor of Penang, R. N. Bland; of Malacca, W. Evans; resident at Labuan, M. S. H. McArthur.

**STRATIGRAPHY.** See GEOLOGY.

**STRAW ITCH.** See INSECTS AND THE PROPAGATION OF DISEASE.

**STREET CLEANING.** No branch of the municipal service affords a better opportunity for increased efficiency at reduced cost than does street cleaning. The operations involved have been standardized to a relatively slight extent and there are few reliable data for use in determining what methods will give the largest yardage of the cleanest streets at the lowest cost. Two or three years ago a special board of

engineers made an extended study and report on street cleaning matters in New York City. One conclusion reached was that washing pavements with hand hose gave better results at less cost than washing by machines, provided flat nozzles held at the proper angle were used. The conclusion was based partly on observations and partly on estimates. In August, 1910, the Street Cleaning Department of New York City made comparative tests of hand and machine washing. It was concluded that three men with hose attached to street hydrants could do about as much in one day as a "Sanitary" washing machine and 75 per cent. as much as a "Connolly" washing machine, one man and two horses being required for each machine. The fire hose required three to five times as much water per unit area cleaned as did the machines. The inference to be drawn from the figures and conclusions given out by the department seemed to be that machine washing costs less per unit area than hand washing, but no figures were reported for wages of men, rental or capital charges on the machines, nor for cost of water; and nothing was reported as to whether one method gave streets as clean as did the other method. More complete data for New York City compared with equally complete data for other cities, would be required to settle the question of relative cleansing and cost. The same general lack is characteristic of most street cleaning information and suggests a need for reform.

**STREET PAVING.** See PAVEMENTS AND ROADS.

**STREET RAILWAYS.** See STRIKES AND LOCKOUTS.

**STRIKES AND LOCKOUTS.** The year 1910 was very notable for the great number of labor disputes both in the United States and in various European countries. One of the undoubted reasons for this was the fall of wages in 1908 and 1909 and the wide-spread demand among workers for an increase in pay as a result of the return of more prosperous industrial conditions. The *New York Labor Bulletin* reported more labor disputes than in any recent year although the number of employes per dispute was unusually small. In the United States an unusual number of disputes were adjusted by conciliatory methods. This was especially true of railways, telegraphs, and building operations. (See ARBITRATION AND CONCILIATION, INDUSTRIAL). Nevertheless public conveniences and general business were sufficiently disturbed by the interruption of public utilities to increase considerably the demand for the perfection of means of preventing trade wars in all cases where the public is the chief loser. Only the strikes and lockouts of greatest interest are noted here.

#### UNITED STATES

**SHIRT-WAIST MAKERS' STRIKE, New York.** The great strike of the women shirt-waist makers which had begun in New York City late in November, 1909, and which involved about forty thousand young women, mostly Jewish and Italian, was not entirely completed at the beginning of the year. Not more than one-fourth of the strikers had succeeded in winning their demands by that time and returned to work. The others were still carrying on a bitter struggle with their employers. Numerous investigations and attempts at settlement were made early in the year. These investigations showed

that the workers were employed upon rush work for about four months late in the winter and spring, and that they had moderate work for about five months in the fall and early winter and slack work during the summer; that the workers were divided into three classes of whom the beginners and apprentices comprise thirty per cent., the average workers forty-five to fifty per cent., and expert workers fifteen to twenty per cent. Dr. Woods Hutchinson (see the SURVEY) computed that the average operators when employed earned from ten to twelve dollars per week, so that the very low wages were limited to the beginners, who were sub-contracted. In addition to these low wages causes of discontent seem to have been the continual fault-finding and discourtesy of employers; the fining system which deducted from wages for many somewhat imaginary offenses; bad air, bad light, over-crowding, refusal of the use of elevators and the locking of doors during rush periods. Perhaps the most notable feature of this great strike was the heroism and devotion to a common cause of thousands of immigrant young women of various nationalities and this in the face of great suffering and privation. Many charges of injustice were made against the police. By the middle of February practically all the employers had come to agreement with their workers. The union membership had reached over twenty-one thousand and included the employes of four hundred shops. All of these had agreed to the closed shop; had acceded to regulations making sub-contracting relatively harmless; and had agreed to adjust differences through committees from the shop and the union. See INJUNCTION.

**Philadelphia.** The sympathetic strike among the shirt-waist workers in Philadelphia which had begun on December 20, 1909, and which involved 7000 workers was settled on February 6. One notable difference between the situation in New York and Philadelphia was the existence of an association in Philadelphia including all the seventy-five manufacturers. While the Philadelphia strike aroused less public support it was well organized and ably conducted by the Women's Trade Union League. The strikers demanded the closed shop, better and more uniform wages, modification or elimination of the contract system, better sanitation, and a more reasonable arrangement of hours and over-time. The same charges of unfair treatment of strikers were made against the Philadelphia police that were frequent in New York. By the agreement, which continues until May, 1911, the employers conceded a permanent arbitration board and the strikers gave up the union shop; union strikers were to be re-employed without discrimination; the wage-scale in each shop to be arranged by a committee of three; no charge to be made for needles or the ordinary wear and tear of machines; the number of hours per week to be fifty-two and one-half with no work on Saturday after one P. M. Nothing was said about sub-contracting.

**CLOAKMAKERS' STRIKE.** The greatest American strike of the year and probably the greatest ever carried on in a single community in the United States, as regards the number of workers and capital involved, was the strike of the cloak-makers of New York City. The capital involved approximated sixty million dollars and the annual product of the industry is even more. This strike, beginning early in July and continuing

until September 2, had for its chief purpose the establishment of a new trade agreement involving the complete recognition of the Cloak and Skirt-Makers' and the International Ladies' Garment-Makers' unions, though minor questions also were involved. Among the latter were the following: The practice of charging employes for electricity and materials; work in tenement houses; hours of overtime and night work; work and pay on holidays and Sundays; sub-contracting; rates of wages; sanitary conditions; and discrimination against union men. The total number of strikers was variously estimated at from 70,000 to 85,000. Representatives from the Civic Federation, of whom Mr. Louis D. Brandeis was foremost, and from the American Federation of Labor used their influence to bring about a settlement. Late in August both sides accepted and then rejected in turn an agreement which involved preference for union men. On August 12, Acting Mayor Mitchel had ordered the police to grant strikers the privilege of picketing the cloakmakers' shops. Later, Supreme Court Justice Goff, at the instance of the Cloak, Suit and Skirt Manufacturers' Protective Association, issued an injunction restraining the strikers from picketing, on the ground that the main purpose of the strike, the closed shops, was illegal. (See INJUNCTION.) Thereupon, on August 30, the Acting Mayor reversed his previous order. Through the efforts of Mr. Brandeis and others a conference between representatives of the strikers and the manufacturers was secured and resulted in a very unusual agreement. The unique feature of this agreement was its acceptance of the preferential union shop. It was agreed by the manufacturers to maintain a union shop, that is, not a closed shop but a shop where union standards are maintained and where preference is given to union men. In addition the employers agreed to cease charges for electricity, to establish a fifty-hour week and a nine-hour day, to limit over-time work and to pay for same at double rates. A minimum wage-scale was drawn up for time workers. There was also established a sanitary board, an arbitration board, and a board to consider minor grievances. The first two of these boards were to include representatives of the union, of the employers and of the public. It was agreed that no strike or lockout should be entered upon until the questions involved should have been submitted to the arbitration committee. There was considerable delay in opening the shops in spite of the satisfactory character of this agreement because the manufacturers claimed that the piece workers were demanding exorbitant rates.

**CHICAGO GARMENT WORKERS' STRIKE.** A great strike of garment workers in Chicago, involving 40,000 persons, began in October and continued to the close of the year. The sole object of the strike was said to be recognition of the union. No great amount of disorder resulted, though numerous small riots, in which two persons were killed, occurred. An apparent settlement was reached in November, due largely to the efforts of Jane Addams of Hull House and national President Ricket of the Garment Makers' Union. This, as also the effort at conciliation by a committee of the Association of Commerce, proved unsuccessful. On December 19 it was announced that the contest had settled down to one of endurance.

**LABOR CONDITIONS OF RAILWAYS.** Early in

the year there were very many signs of unrest among the railway workers of the country. The strike of the railroad switchmen of the Northwest, which had begun on November 30, was still in progress, and early in January it appeared probable that many thousands of railway men would go on strike in sympathy. However, no actual break occurred. About 10,000 other switchmen put in similar demands. In addition trainmen and conductors to the number of almost 150,000 on the roads east of Chicago and north of the Chesapeake and Ohio Railway presented a demand for higher wages. Similar demands were made by 25,000 firemen and engineers. These were only a few instances of numerous demands of like nature made by all groups of railway men throughout the East and Middle West. The fundamental cause of this unrest was said to be the higher cost of living. The men had not pressed demands for better pay after the crisis of 1907 and, therefore, held that the railways should now share the increased earnings due to the return of prosperity. The railways, on the other hand, contended that their ability to pay higher wages was limited by the public control of rates. All of these prospective strikes were prevented by conferences between railway managers and representatives of employees. In practically all cases wages were advanced. Early in the summer another wave of discontent swept over the railway employees. A dispute on the Southeastern roads, arbitrated under the Erdman act, resulted in advances of from 12 to 30 per cent. in wages. A strike by Missouri Pacific telegraphers was similarly arbitrated; and with only a few minor strikes, the wages of 25,000 locomotive engineers on 61 roads and thousands of other railway employees, both organized and unorganized, were advanced. A strike of Missouri Pacific machinists and metal-workers, begun May 2 and attended by a sympathetic strike beginning October 21, was ended December 19 on terms offered by the company May 1. This almost universal disquietude among railway men occasioned wide discussion of means of preventing railway strikes. It was pointed out by many writers that the interest of the public in the continuance of railway service has become so very great that the prevention of strikes is absolutely essential to public welfare. The result of this discussion was the development of considerable opinion favorable to some laws providing that railway strikes should not be ordered until grievances have been submitted to some committee of arbitration. It was pointed out that the Interstate Commerce Commission having been given control of railway rates should logically be given control of the wages of railway employees.

**COLUMBUS STREET RAILWAY STRIKE.** The most bitter street railway strike of the year was that at Columbus, Ohio, begun in July and continuing through to September. The violence in the city amounted almost to a state of anarchy by the last of July, with the result that Governor Harmon ordered five regiments of the Ohio national guard to the scene. The soldiers to the number of 3300, involving the State in an expenditure of more than \$10,000 per day, succeeded in restoring order. They were, however, withdrawn after a few days, the expectation being that the mayor and the police force would be able to cope with the situation. The rioting was, however, resumed, especially at night.

Moreover the police force was demoralized by the refusal of about forty of its members to fire on the strikers. The national guard were again placed in charge. The company had introduced a considerable number of rough strike-breakers, with the result that the violence in this strike was marked by an unusual amount of shooting and destruction of property. Not only was the entire community subjected to great financial loss and inconvenience but various portions of the city were terrorized at various times. The cost to the State was \$250,000. By the first of September the union expressed its willingness to arbitrate, but the street railway manager declined the proposition. The men finally gave in and sought re-employment.

**PHILADELPHIA STREET RAILWAY STRIKE.** The strike of the Philadelphia Street Railway employees in June, 1909, was settled largely by political pressure and resulted in an agreement for only one year. After that strike a new union was formed among the car men. Leaders of the old union claimed that this new union was formed at the instigation of the company. Although the company denied any connection with the new union, bad feeling developed. In January, 1910, negotiation was begun to establish a new agreement. While this was in progress the company discharged 173 men, claiming that this many cases had accumulated during a period of several weeks. The union leaders claimed that this was an effort to weaken the union and at the same time force a strike. They consequently ordered a strike for the recognition of the union. The transportation of the city was immediately paralyzed, from four to six thousand men going out February 19. The regular police force of the city proved weak and inefficient. After several days of rioting and disorder, during which several persons were killed, hundreds were injured, much property destroyed and the entire community put to great loss and inconvenience, about two hundred of the State's mounted constabulary were brought into the city and at once restored order. In the last week of February the Central Labor Union ordered a general strike. It was claimed that about sixty thousand men in seventy-five different trades obeyed the order. This added immensely to the confusion and loss, but the strike had been lost from the time the State police restored order. The company soon had a large proportion of its cars running. The result was that the men returned to work April 17 on conditions proposed by the company several weeks earlier. These were that all men should be taken back; that the 173 discharged men should have their cases settled by arbitration; that the men should receive a wage of twenty-three cents per hour with the increase of one-half cent per hour every six months until twenty-five cents was reached; and that there should be no discrimination by employers or intimidation by unions on account of membership or non-membership in a union. The report of the company in September estimated its losses from the strike at \$1,500,000 in fares and \$300,000 in extra expense.

**NEW YORK EXPRESSMEN'S STRIKE.** A strike of the drivers and helpers employed by the express companies in and about New York City was begun about the first of November. It was led by the International Brotherhood of Teamsters, and had as its objects better wages and shorter hours for some few employees, although

the demand for the recognition of the union was also a factor and most of the strikers were out in sympathy. Great quantities of express matter of every description, much of it perishable, quickly accumulated in all express offices and at the railway depots. Efforts by the companies to break the strike by employing new men led to much rioting in spite of the efforts of the police to preserve order. It was later discovered that these new drivers were employed contrary to a city ordinance requiring all such to be licensed; consequently not only was police protection withdrawn from the strike-breakers but the latter were arrested and their wagons taken to the city pound. Meanwhile Mayor Gaynor had succeeded in inducing the drivers to return on condition that differences should be settled by conference between each company and its men, and that the companies should not discriminate against men for belonging to a union. The companies at first refused to accept this latter condition. But vigorous expressions of opinions from the mayor and the Merchant's Association induced them to give in on the tenth of December, though they reserved the right to refuse to take back any men who were guilty of acts of violence. Any new agreements were to take effect December first. There was some delay in securing the assent of the strikers in Jersey City, but this was done in time for leaders to order all back to work Monday the fourteenth.

Meanwhile the express companies had applied for an injunction against the city authorities restraining them from enforcing the ordinance requiring the licensing of express drivers and wagons. Their ground was that the ordinance was invalid, being an interference with interstate commerce. This contention was not sustained by the court.

While the express strike was at its height, drivers for coal and ice-cream companies and the taxicab chauffeurs went out in sympathy. The latter made a determined demand for the recognition of the union, and remained out after the express strike was settled. Numerous efforts on the part of Mayor Gaynor to effect a settlement were finally successful on December 5. The employers agreed not to discriminate against union men. Though this proposition was at first rejected by the strikers, it was finally accepted on the ground that it amounted to a partial recognition of the union.

**WOMEN WEAVERS' STRIKE, ROXBURY.** There was a unique strike of women weavers in the carpet factories of Roxbury, Mass., about the middle of March. Many of them had worked many years in the factory and were children of a previous generation of workers. The immediate cause of the strike was the statement by the company that wages were to be cut 12½ per cent. and that the mills were to be closed for two weeks. Ill feeling had developed as a result of the passage of ownership of the mills into the control of absentee stockholders following the deaths of the originators and a consequent disappearance of long established personal relations between employers and employees. After twelve weeks the strike resulted in a complete victory for the strikers. Not only was the old wage-scale restored but the principle of collective bargaining was conceded.

**SUGAR REFINERS' STRIKE, WILLIAMSBURG.** A strike of over two thousand laborers, mostly Poles and Lithuanians, in the Williamsburg (N.

Y.) refineries of the American Sugar Refinery Company, late in July, was attended by considerable violence and the loss of several lives. The strikers demanded an increase from eighteen to twenty cents per hour in wages. The wives of the strikers participated in the disturbances. Efforts to settle the strike by Fathers Farrell and Yacka, the latter a Polish priest, were not successful. They induced the company to agree to reopen the plants and to meet a committee of the strikers to adjust grievances. This caused temporary jubilation among the strikers and their wives, but the men were later induced by a labor leader to stand firm for twenty cents an hour. The company broke the strike by bringing more than 1500 workers to the plants by means of boats.

**COAL STRIKES.** Strikes occurred in the anthracite coal region at Carbondale, Avoca, and other points in the anthracite coal fields of eastern Pennsylvania; and at Irwin and other points in Westmoreland county, in the western part of the State. In both cases State constabulary were needed to assist local police in preserving order. In Westmoreland county the contest, begun in March, was still on at the end of the year. On December 19, President Samuel Gompers, following a resolution of the American Federation of Labor, called upon Governor Stuart to investigate conditions in the Irwin field. At one time there were about 17,000 strikers in Westmoreland county; by late fall about 10,000 of these had gone elsewhere, some had returned to work, and the remaining 5000 were keeping up the fight. A state bordering on civil war prevailed in many sections during the greater part of the year, many being killed. The causes of the trouble were an accumulation of grievances, the introduction of a new powder, and efforts of the United Mine Workers to organize the miners.

**LABOR TROUBLES IN LOS ANGELES.** At Los Angeles a contest was carried on throughout the year between trade unions and employers opposed to the unionization of the city. In October the Los Angeles Times building was dynamited and 21 employees killed; the crime was attributed to trade unionists. A bomb explosion on December 25 at an iron works, where a strike for the union shop had been in progress some months, was also attributed to the unions.

**BRICKLAYERS' STRIKE AND LOCKOUT.** A strike of bricklayers belonging to the Bricklayers and Masons' International Union was begun in July on the contracts of Nesbit & Company in Newark. The cause was the employment by the firm of plasterers not recognized as union men by the bricklayers. The Mason Builders' Association then ordered a lockout of about 10,000 bricklayers employed by its members in greater New York. The union in turn called for sympathetic strikes on the contracts of these firms throughout the country. About 100,000 men in New York, Chicago, St. Louis, Kansas City, San Francisco, and elsewhere were out. The dispute terminated on October 6 with the extension of union rules to all cities and towns not covered by the previous trade agreement. For the results of this agreement, which had prevented strikes for 15 years, see **ARBITRATION AND CONCILIATION, INDUSTRIAL.**

**CIGAR MAKERS' STRIKE.** About July 1, a most bitter contest began between the Cigar Makers' Union and the Cigar Manufacturers' Association of Tampa, Fla. A strike had been called because

of the alleged discrimination against union men; this was followed by a lockout of from 8000 to 12,000 men by the associated employers. Strike breakers from Cuba were forced to return under the Alien Contract Labor Law. There were several fatal assaults attributed to union men; but, on the other hand, a Citizen's Committee used a show of armed force in closing the Labor Temple and in forcing trade unionists to leave the city. The dispute which had become a most determined fight for the closed shop was not settled at the end of the year. The strikers were being assisted by cigar makers' unions throughout the country.

#### FOREIGN COUNTRIES

**CANADA.** By far the most important Canadian strike of the year was that of the conductors and trainmen on the Grand Trunk railway which began on July 18. The chief demand of the men was an increase in wages. Almost immediately after the outbreak of the strike numerous scenes of violence and disorder occurred at various points along the route. This disorder and lawlessness resulted in bloodshed, incendiarism, and dynamiting, necessitating in some instances the calling out of troops. As a result of government intervention the strike was brought to a close on August 2. The settlement was a compromise favorable to the strikers. The men secured an advance of wages approximating 18 per cent., which was to date from May 1, 1910, thus being retro-active. Moreover, it was agreed by the railway to standardize pay and rules on the same basis as that recently conceded by the Canadian Pacific Railway, such standardization to become effective January 1, 1912. In the case of the Central Vermont Railroad which was also affected by the strike this standardization is to be that of the Rutland Railway. The company did not agree to restore immediately strikers to their former positions but to do so only as soon as possible, it being understood that those engaged in violence, coercion, or intimidation would not be taken back at all.

**GREAT BRITAIN.** The most notable English labor disturbance was the lockout of the Lancashire cotton district. From May until late July this industry was disturbed by a dispute over a 5 per cent. reduction of wages. Settlement provided for no reduction before 1915. In June a workers' union known as the Oldham Cardroom Association voted against cleaning machinery with cotton waste. One of its members, George Howe, employed in the Fern Mill, carried out this vote. He was discharged and the association went on strike. This continued until September 19, when the Employers' Federation announced that, unless the Fern Mill employes returned to work by October 1, a general lockout would be declared. Efforts at settlement failed because the union insisted on the reinstatement of Howe, and this the employers refused to do. Consequently 150,000 workers were locked out. Attempt was made by George R. Askwith, K. C., of the National Board of Trade, to settle the dispute by means of joint conferences of representatives of employers and workers. He at length succeeded, work being resumed October 17. The importance of the lockout was due to the fact that more than 40,000,000 spindles were stopped. As the supply of yarn was already low a continuance of the lockout would have involved stoppage of the

work of the weavers. The coal trade and small shopkeepers in the cotton towns suffered severely. The resources of the strikers' union were very great and lockout benefits amounting to \$200,000 a week were paid.

As the result of the transfer of a head shunter from one yard to another a strike was begun on the Northeastern Railway in July. The real cause of the strike was the accumulation of many petty grievances during the preceding months. Sympathetic strikes on the part of other railway men increased the number of strikers to 60,000 by the fourth day. The strike was entirely unauthorized, many unions breaking their trade agreements. The company was alarmed by the size of the protest and the strikers were disconcerted because the Amalgamated Society of Railway Servants refused to recognize them. Work was resumed July 22, on terms proposed by the company. The men received full pay even for the strike days; no men were to be proceeded against for broken agreements; no black marks were to be made in the records of the strikers; petty grievances were to be adjusted; and the case of the transferred shunter was to be taken up with two fellow workers.

A state of unrest prevailed throughout the year in the coal-mining regions. This was due in the main to the introduction of the Eight-Hours Act, which raised many points not settled by existing trade agreements. There were strikes and some rioting in the Durham and Northumberland districts during the early months, and small disturbances throughout the year in South Wales with a serious strike and much anarchy during the fall. Three chief questions were involved: whether an extra hour per week should be worked in addition to the 8 hours per day; whether wages should be advanced by amounts ranging from 2½ to 5 per cent.; and whether miners working on thin veins or under conditions where a large output is impossible should receive a stipulated minimum wage, regardless of their output. The most destructive rioting occurred in the Rhondda valley in Wales in November, at which time about 30,000 miners were out; some of these were being supported by the Miners' Federation; others had struck illegally. The latter became desperate and London police and special troops were needed to preserve order. See **GREAT BRITAIN**, paragraphs on *History*.

There was a sudden strike of caulkers and hole-borers in the ship building trades in August; the men returned to work in order to avoid a threatened lockout. As a result of a strike of boilermakers early in September, in violation of a trade agreement to submit all matters of dispute to arbitration, the Ship Building Employers' Association instituted a lockout. About 48,000 workmen were affected, the entire industry on the northeast coast being crippled. The employers demanded that the men be fined for violating the trade agreements; this demand was abandoned. Through the intervention of the Board of Trade, settlement was reached on December 14; the Boilermakers' Society agreed to guarantee the fulfillment of the agreement in the future, and an advance of wages was conceded. The total loss of wages to the boilermakers and others thrown out was about \$4,000,000.

The first attempt to apply the new Trades Boards Act (see **LABOR LEGISLATION**) authorizing the formation of a Board in any trade to

determine minimum wages and standards, was made in connection with the women chainmakers at Cradley Heath. These women were said to work twelve hours per day at their crude forges in their own houses hammering out heavy chains. They were paid from one and one-half to three pence per hour or five to six shillings per week. On August 22 a Wage Board fixed three and one-half pence per hour as the minimum wage. The Act allowed an extension of six months before carrying out the finding of the board; a number of women signed unawares an agreement to that effect. They later discovered the significance of the paper they had signed and went on strike. The Women's Trade Union League and the Trade Union Federation took up their cause and paid strike benefits of five shillings per week. Altogether about five hundred of the nine hundred women chainmakers were out. The strike was ended about October 20 by the agreement of all manufacturers and middlemen to pay the wage fixed by the Trade Board.

**GERMANY.** There were numerous strikes and lockouts, the two most important being described below. The most serious rioting of the year occurred in Berlin late in September as the result of the employment of blackleg coal drivers. Almost 300 persons were injured and several killed. A big lockout in the building trades beginning in April, involving 250,000 men, was settled by arbitration. The arbitrators were a Government Councillor, the Mayor of Dresden, and the President of the Munich Industrial Court. Their recommendations, published May 3, were at once accepted by the National Association of Master Builders and the various national trade unions involved. A maximum ten hour day is to be ultimately established; piece work schedules to be provided; no discrimination to be made against those taking part in the disputes; and a national system of arbitration and conciliation to be worked out for the future. In June a further award increased wages slightly and provided a maximum day of 9½ hours in six large cities after April, 1911, and of ten hours elsewhere after April, 1911, or April, 1912.

A strike of 8000 mechanics in the shipyards at Hamburg on August 4 was the beginning of widespread interruption of the ship-building industry in west and northwest Germany. The men demanded an increase in wages of 10 per cent. and other concessions. Stevedores, ship cleaners, and painters joined in the general dispute a few days later. The strikers were supported by Socialist organizations and by the Metal Trades Workers' Union. In order to force a conclusion of the strike the Association of Metal Employers voted to lock out 60 per cent. of their employees if work was not resumed by October 8; the men in turn voted a strike of 60 per cent. in case of a lockout. From 500,000 to 700,000 men would have been idle. A settlement was reached on October 14, the men receiving a reduction of one hour per week and an increase of 4 to 5 per cent. in wages. See **GERMANY**, paragraphs on *History*.

**FRANCE.** One of the strikes causing the greatest amount of international interest was the strike of the employes on the Northern and Western railways of France. This was planned and directed in part by the General Confederation of Labor, which for several years has been carrying on violent labor disturbances with the

view of overturning the existing political and industrial régime. The railway strike was apparently intended to show the power of organized labor, and was based on the demand that one dollar be the minimum daily pay for any kind of railway work. To enforce this demand the union threatened to tie up all railway traffic as well as transportation by the street railways, subways, and carriages in Paris, to shut off electric lights and power, and to cut off the city's food supply. The strike began October 11. Trains were instantly halted and passengers to Atlantic ports and commuters were much inconvenienced. For the moment a food famine threatened Paris, but the government, under the lead of Premier Briand, showed a strong and determined hand. It requisitioned all boats on the Seine to bring in supplies; it likewise provided transportation by water to Atlantic ports. It stationed troops along the railway and it required all strikers who belonged to the army reserves to report for military duty. (See **FRANCE**, paragraphs on *History*.) In addition fifty-two strike leaders were arrested. The strikers resorted to malicious destruction of property, removing rails, cutting air brake tubes and destroying telegraph wires and poles. Within a few days, however, Premier Briand had secured a settlement which conceded the principal demands of the strikers. The cost of this strike to the country was estimated at \$55,000,000. The railways and other transportation companies generously rewarded those employes who remained on duty. The government thereafter took up the formulation of a law making the publication of revolutionary articles inciting to strikes and rioting offenses against the Press Law. See **ARBITRATION AND CONCILIATION, INDUSTRIAL**.

In April and May there were strikes of seamen, naval reservists, and others employed in the shipping industry at Marseilles, with two partially successful attempts to secure general sympathetic strikes at Dunkirk and Bordeaux. The immediate cause was the punishment of a number of seamen for desertion. The government took prompt measures by sending troops to preserve order and by taking charge of the transportation of mails. Normal conditions returned by May 10.

**SPAIN.** During the latter half of the year many very serious labor troubles developed. The chief centres were Bilbao and San Sebastian in the north, and Barcelona in the northeast. At the former places the wharves were paralyzed by strikes of cartmen and dockmen in sympathy with striking coal miners. Later in August the Workingmen's Association of Bilbao ordered a general strike. This order, however, was countermanded, but the rioting so paralyzed business that martial law was declared. In Barcelona a strike of 8000 metal workers was attended by a strike of 6000 miners at Sabadell. Much rioting was followed by the employment of military force to establish order. The disputes were not settled late in December. The continued labor disturbances were responsible in part for extensive emigration of laborers to the Americas.

**SUBWAYS.** See **TUNNELS AND NEW YORK**.

**SUDAN, ANGLO-EGYPTIAN.** A territory extending south from Egypt to Albert Nyanza and Uganda. Estimated area, 950,000 square miles; population, about 2,000,000 (Abyssinians, Egyptians, East Indians, Arabs, negroes, and 3104 Europeans). Capital, Khartum, with 18,235 inhabitants; Omdurman has 42,780. An educational system is being built up and there are training colleges for teachers at Khartum (Gordon Memorial), Omdurman, Suakin, and Rufaa. Khartum is the centre of Mohammedanism in the Sudan, and a magnificent mosque has been built there. There are under cultivation about 1,106,175 acres, and the country is especially adapted to the raising of cereals and cotton. The Omdurman gold-fields are being developed. Imports (1908), £E1,892,798 (clothing, coal, machinery, railing material); exports, £E515,938 (gums, ivory, ostrich feathers, cereals, cotton, dates). The railway from Cairo to Khartum (1047 miles) is being extended southward, and reached Wad Medani (110 miles) in December, 1909. The Nile-Red Sea Railway (113) has been built from Port Sudan to the mouth of the Atbara River. The Kareima-Abu Hamed Railway (138) runs eastward from the Nile to Abu Hamed, where it joins the line to Berber and Khartum.

There were in 1909 4965 miles of telegraph lines and 57 post and telegraph offices. Cost of military operations in the Sudan, 1883-6, £7,091,310; cost of the campaigns resulting in the overthrow of the Khalifa (September 2, 1898), £789,802. Revenue for the year 1909, £E1,040,000; expenditure, £E1,153,000. Estimates for 1910, £E1,100,000 and £E1,425,000. The results of years of war, pestilence, and famine will be felt for some time to come; and for the present the excess cost of administration over local revenue is borne by the Egyptian government. Each of the 13 provinces is under a governor, who is a British officer of the Egyptian army. Darfur is left under the rule of its sultan. The supreme military and civil command is vested in a governor-general (1910, Lieut.-Gen. Sir F. Reginald Wingate, Sirdar of the Egyptian army). Upon the death of Leopold II., King of the Belgians, the lease of the Lado Enclave lapsed and that territory reverted to the Anglo-Egyptian Sudan.

**SUGAR, WORLD'S PRODUCTION.** The world's production of sugar in 1910-11 is estimated at 17,023,000 tons, or 2,143,000 tons more than in 1909-10. Cane and the sugar beet contributed about equally to this total output. The production from cane was 8,521,000 tons, distributed as follows: United States (Louisiana and Texas), 310,000 tons; Porto Rico, 320,000; Hawaii, 485,000; Cuba, 1,900,000; British, French, and Danish West Indies, 215,000; Santo Domingo, Haiti, and Lesser Antilles not named, 108,000; Mexico, 170,000; Central America, 17,000; Brazil, 310,000; Peru, 150,000; Argentina, 130,000; Demerara, 100,000; other South American countries, 16,000; British India, 2,100,000; Java, 1,175,000; Philippines, 230,000; China, 120,000; Australia and Polynesia, 256,000; Africa (Egypt, Mauritius, Réunion, and Natal), 351,000, and Spain, 24,000 tons.

**BET SUGAR, UNITED STATES.** The beet sugar crop is estimated at 8,502,000 tons, of which 445,000 are credited to the United States. The season was unfavorable to the crop in several States, whereas the production in California, Michigan, and Wisconsin con-

siderably exceeded that of the previous year. California led with 129,000 tons, followed by Michigan with 105,000, Colorado with 88,000, Utah with 40,000, Idaho with 19,000, and Wisconsin with 17,000. There were three new factories in operation in 1910, and in 1911 there will be five new ones, two in California, and one each in Colorado, Utah, and Nevada. The factory value of the beet sugar was about \$51,000,000, which with that from the cane mills brings the total value of the United States product up to about \$97,000,000.

**FOREIGN COUNTRIES.** In Canada it is estimated that 10,500 acres of beets were grown, indicating a sugar production of 9500 tons. The estimated European crops of beet sugar were: Germany 2,500,000 tons, Austria 1,600,000, France 825,000, Russia 1,900,000, other countries 525,000 tons. Dutch sugar concerns have been contracting with farmers in eastern England to supply sugar beets for factories in Holland. Sugar beet growing is to be introduced into Hawaii, on the island of Lanai, which has been practically barren for many years. A water system is to be installed, which it is believed will make a large acreage available for beet raising. Experimental plantings have given encouraging results, the percentage of sugar being high. The favorable tariff with the United States has aroused widespread interest in sugar production in the Philippines. Sugar growing there has far outstripped the methods of milling practised, which result in an enormous loss by poor extraction, and the open kettle evaporation, used exclusively, produces only a fair grade of sugar. The first need of the industry is a series of modern central mills in all the principal sugar districts. The growing of sugar cane in the Australian Commonwealth has shown a constant decline since 1906. In Greece sugar has been made a government monopoly. Proposals for supplying the monopoly are to be asked from various countries in the spring of 1911. By royal decree, December 1, 1911, has been named as the date on which the monopoly will go into effect.

**CONSUMPTION.** The sugar consumption in the United States in the fiscal year 1910 was about seven and one-half billion pounds or 83 pounds per capita, the largest for any year. The American Sugar Refining Company has agreed to make a further payment of \$700,000 to the United States Government on account of customs frauds, which will bring the total amount recovered from this company up to nearly \$3,000,000. In November, 1910, the government brought suit under the Sherman Act to dissolve the "Sugar Trust," naming 31 sets of defendants. See TRUSTS.

**SUMNER, H. L.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**SUMNER, WILLIAM GRAHAM.** An American political economist and educator, died April 12, 1910. He was born at Paterson, N. J., in 1840, and graduated from Yale College in 1863. He subsequently studied at the universities of Göttingen and Oxford and became a tutor at Yale in 1866, serving in that capacity until 1869. In 1867 he was ordained clergyman in the Protestant Episcopal Church and was for some

time assistant at Calvary Church, New York City, and rector at Morristown, N. J. In 1872 he was appointed professor of political and social science at Yale College and remained in this position until 1909, when he retired. His lectures on economics attracted considerable attention from their pungent and incisive style. He was an earnest advocate of free trade and read and lectured much in favor of this economic principle. Among his chief publications are the following: *A History of American Currency* (1874); *Lectures on the History of Protection in the United States* (1875); *Life of Andrew Jackson* (American Statesmen Series) (1882); *What Social Classes owe Each Other* (1882); *Essays on Political and Social Science* (1883); *Protectionism* (1885); *Robert Morris* (1891); *A Financier and Finances of the American Revolution* (1892); *The History of Banking in the United States* (1896); *Folkways* (1907).

**SWAN, JOHN MACALLAN.** An English artist and sculptor, died February 14, 1910. He was born at Old Brentford. He was about 50 years of age at the time of his death. He studied at the Worcester School of Art, at the Lambeth Art School and under various masters in Paris. He also studied sculpture under Frémiet. In 1885 he received honorable mention at the Paris Salon, and in 1889 he was awarded a silver medal at the Paris International Exhibition. At the Exhibition of 1900 he was awarded a first-class gold medal for painting and a first-class gold medal for sculpture. He began exhibiting figure and animal pictures in 1878. He also exhibited at the Grosvenor Gallery and the New Gallery. He was elected an associate of the Royal Academy in 1894 and a member in 1905. Among his best known paintings are "Orpheus," "The Prodigal Son," "Lioness Attending Her Cubs," and "A Dead Hero." His best known pieces of sculpture are "Puma and Macaw," "Boy and Bear Cubs," and "A Wounded Leopard."

**SWANN, A. J.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**SWARTHMORE COLLEGE.** An institution of higher learning at Swarthmore, Pa., founded in 1869. The number of students enrolled in the year 1910-11 was 370 while the faculty numbered 36. During the year Dr. Walter Dennison of the University of Michigan was elected professor of Greek and Latin. There were no notable benefactions during the year. The productive funds amount to about \$1,000,000 and the total income is about \$200,000. In the library there are about 35,000 volumes. The President is Joseph Swain.

**SWAZILAND.** A British protectorate in southern Africa. Area (official estimate), 6630 square miles. Population (1904): white, 890; native, 84,601. Statistics following are for the year ending March 31, 1910. Births (European), 31; deaths, 12. No records of native births and deaths. There are five European (119 pupils) and two native (78 pupils)

government-supported schools. The government also subsidizes some of the native mission schools. Some corn, sorghum, peanuts, and sweet potatoes are grown, but not sufficient to supply local demands. Now that the tenure under concessions granted by the late paramount chief Umbandine has been defined by means of legislation and survey, agriculture is expected to develop. Good grazing is abundant. Livestock: 600 horses, 50,000 cattle, 10,000 sheep, 80,000 goats. There are five principal gold mines and four alluvial tin mines in operation, employing about 2017 natives and 74 whites; output 1909-10, 446 tons cassiterite tin, valued at £28,368, and 11,202 ounces fine gold, valued at £46,707; 1908-9, 526 tons tin (£42,005) and 6749 ounces gold (£28,669); 1907-8, 535 tons tin (£49,568) and 3108 ounces gold (£13,203). Imports for the year were valued at £44,309 (in 1909, £47,310; in 1908, £37,850), and exports at £90,348 (in 1909, £56,206; in 1908, £83,148). Exports include re-export of specie, £4000. Imports to the value of £42,765 were merchandise; £1000 specie; £544 government stores. Principal exports of home produce: raw gold, £44,499; tin ore £41,768; hides, £54. There are no local railways. Revenue and expenditure for four years are shown below:

	1906-7*	1907-8	1908-9	1909-10
Revenue	44,922	39,529	46,484	44,718
Expenditure	74,845	57,568	91,127	54,217

\*Nine months.

The extraordinary expenditure (£10,074 in 1909-10, £49,874 in 1908-9, £18,094 in 1907-8, £52,511 in 1906-7) was incurred through the expropriation of monopolies and the cost of the settlement of the Concessions question. Public debt (March 31, 1910), £90,000. Police force: European, 5 officers, 20 non-commissioned officers and men; native, 19 non-commissioned officers, 150 constables. The territory is administered by the high commissioner for South Africa through a local resident-commissioner (1910, R. T. Coryndon), with headquarters at Mbabane. The native ruler is Sobhuza, a child under the regency of Nabotsibeni, his grandmother; he attends one of the native government schools.

**SWEDEN.** A constitutional monarchy of northern Europe. Capital, Stockholm.

**AREA AND POPULATION.** Area, 172,877 square miles. Population (1900), 5,136,441; estimated December 31, 1909, 5,476,441. Marriages (1908), 33,084; births, 142,309; deaths, 84,503; stillbirths (included in foregoing), 3435; emigrants, 12,499 (to United States, 8873); immigrants, 9818. Emigration has fallen off, having been 22,978 in 1907, 24,704 in 1906, and 39,525 in 1903 (to United States, 35,439). Stockholm had (end of 1909) 341,816 inhabitants; Göteborg, 163,957; Malmö, 81,169; Norrköping, 45,471; Helsingborg, 32,763; Gäfle, 31,930; Örebro, 29,107.

**EDUCATION.** Primary education is free and compulsory, and illiteracy is rare. Schools (1907): 14,226 elementary, with 19,925 teachers and 771,626 pupils; 15 normal, with 1491 students. Secondary schools are numerous and efficient. There are special and technical schools and two universities—Lund (967 students in 1907) and Upsala (1974); besides

a state faculty of medicine and private universities at Stockholm and Göteborg. The Lutheran is the state religion; entire religious liberty prevails.

**AGRICULTURE, ETC.** Forests cover 52.2 per cent. of the total surface, and are largely pine, fir, and birch. The timber, pitch, tar, and fuel obtained form a rich source of revenue; the crown forests cover 7,125,845 hectares (one hectare=2.471 acres) and yielded, in 1906, 2,649,910 cubic metres of timber. Lakes cover about one-twelfth of the surface. In 1907 the area under rye was 407,000 hectares; under barley, 197,000; oats, 811,000; wheat, 88,000; total cereals (including other), 1,896,000 hectares; under potatoes, 151,000. Total cereal yield (1907), 37,245,000 hectolitres; potatoes, 19,000,000. Total value of cereal crop, 306,600,000 kronor; of all crops, 787,400,000. Livestock (1907): 566,227 horses, 2,628,982 cattle, 1,021,727 sheep, 878,828 swine.

**MINING AND METALS.** In 1908, 31,754 persons were engaged in mining; 23,399 in iron and steel works, 3905 in other metal works. Output from the mines in 1907: 4,480,070 tons iron ore (4,713,160 in 1908); 2058 tons silver and lead ore, 21,371 copper ore, 40,077 zinc ore, 4616 manganese ore, 29,569 sulphur pyrites; (1908) 305,206 coal. Pig-iron produced (1908), 567,821 tons; bar iron, 390,957; gold (1907), 20.295 kilograms; silver, 630; lead, 277,371; copper, 2,807,792; zinc, 274,181. Value of total output of iron and steel works (1907), 89,889,548 kronor; of other metal works, 29,156,168.

**OTHER INDUSTRIES.** There were (1907) 1400 saw and planing mills, with 40,912 employes, value of output 172,872,343 kronor; 512 joinery and furniture factories, 11,921 (28,038,979 kronor); 143 wood-pulp factories, 11,058 (89,902,540 kronor); 66 paper and paste-board mills, 7725 (45,939,881); flour mills, 100, 525,582 kronor; machine shops, 84,274,701 kronor; sugar refineries, 58,669,728 kronor; raw-sugar mills, 42,363,874 kronor; breweries, 42,287,950 kronor; distilleries, 33,859,946 kronor; cotton mills, spinning 26,586,258 kronor, weaving 30,161,989 kronor; woolen mills, spinning 29,747,072 kronor, weaving 43,016,296 kronor.

Complete statistics of the industries for 1909 are lacking; but in every branch the effects of the general strike of August and September of that year were felt. It is reported that only 3,885,046 tons of iron were mined—the lowest figure in six years; and that the production of pig-iron fell to 443,000 tons. The cotton mills suffered from a shortage of raw cotton as well as from the strike.

**COMMUNICATIONS.** Length of railways (end of 1908), 8321 miles (2698 state-owned); of all telegraph and telephone lines (exclusive of private telephone lines), 22,146; of wires, 176,825; telegraph offices, 2660; post-offices, 3735.

Vessels entered (1908), 34,368, of 10,084,000 tons; cleared, 34,605, of 10,037,000 tons.

**COMMERCE.** The imports and exports are given for three years in kronor:

	1906	1907	1908
Imports .....	644,227,836	682,104,613	608,932,000
Exports .....	504,284,813	524,662,547	482,017,000

\* From the Luossavaara-Kiurunavaara Co., Ltd.

The public debt (contracted almost entirely for railway construction) amounted, January 1, 1910, to 526,430,110 kronor. The Riksbank is the only bank of issue; its accounts balanced, January 1, 1909, at 361,836,566 kronor. The postal savings bank had at the end of 1908, 560,410 depositors, and 46,422,570 kronor deposits; other savings banks, 1,508,871 depositors, and 719,577,079 kronor deposits (688,614,199 kronor at end of 1907 and 613,319,195 kronor at end of 1905).

**ARMY.** The army embraces 28 regiments of infantry, 25 of which have 3 battalions; 2 regiments of 2 battalions each, and 1 regiment of 2½ battalions of Gotland, making a total of 81½ battalions of infantry. There are 8 regiments of cavalry divided into 56 squadrons, 6 regiments of field artillery, one of which includes 3 horse batteries in addition to the 9 batteries comprising each regiment. There was also one corps of artillery in Gotland and 3

mountain batteries; one regiment of heavy foot artillery divided into 4 batteries, and an artillery corps in Gotland with one heavy battery. There was one regiment of fortress artillery with a battalion of four batteries at Sailesburg and a battalion with 3 batteries at Boden. In addition each of these regiments of field artillery has 2 batteries of howitzers, making 12 howitzer batteries with 48 howitzers. There were one regiment of fortress artillery comprising 10 companies, 2 battalions of engineers comprising 2 companies and 6 battalions (18) companies of train.

The active army in 1910 consisted of 2226 officers, 2234 non-commissioned officers, 21,016 in voluntary cadres, and 40,350 in the annual contingent. The total was 65,826 men and 8793 horses. The war effective was estimated at about 320,000 and the Landsturm with 8 classes at about 165,000.

**NAVY.** The effective navy in 1910 included 91 vessels, of 67,250 aggregate tons, detailed as follows: 12 armored coast-defense vessels, of 42,600 aggregate tons; one armored cruiser (4100); 3 armored gunboats of 4500, and 7 of 3200 aggregate tons; 5 torpedo gunboats (4000); 4 gunboats (1850); 6 torpedo-boat destroyers (2600); 31 first-class torpedo boats (3100); 22 second-class torpedo boats (1300). Two destroyers (the *Vidar* and the *Hugin*) were acquired in 1910. Other torpedo boats and destroyers are building or projected, and three submarines were authorized in 1910. Personnel, about 7500 of all ranks.

**GOVERNMENT.** The king is the executive, acting through a responsible council. A diet (*Riksdag*) of two chambers is the legislative body. Reigning sovereign (1910), Gustaf V, born June 16, 1858; married, September 20, 1881, to Princess Victoria of Baden; succeeded, December 8, 1907, Heir-apparent, Prince Gustaf Adolf, born November 11, 1882. The Council of State (appointed May 29, 1906; reconstituted December 4, 31, 1907, March 17, June 11, 1909, and June 10, 1910) was as follows: Premier, S. A. A. Lindman; Foreign Affairs, A. F. Count Taube; Justice, G. A. Petersson; Finance, C. J. G. Swartz; Interior, H. E. G. Count Hamilton; Marine, H. V. M. von Krusenstjerna; War, Major-General O. B. Malm; Worship, etc., Dr. P. E. Lindström; Agriculture, S. O. Nylander; without portfolio, C. F. W. von Hederstierna and K. H. von Sydow.

The Riksdag opened on January 17. The speech from the throne referred to the good relations with foreign powers, the frontier question with Norway having been settled by arbitration, and promised to introduce a measure for preventing strikes and protecting public institutions and to submit proposals for tariff revision, the increase of stamp duty and death dues, the amendment of the method of taxing income and the increment of wealth. On August 2, the Universal Peace Congress held its eighteenth meeting at Stockholm, with 500 delegates representing 22 nations.

**SWEET WINES.** See LIQUORS, *Fermented and Distilled*.

**SWIMMING.** Charles M. Daniels of the New York A. C., who holds every record from 25 yards to one mile, again demonstrated in 1910 that he was in a class by himself as a swimmer. The majority of the new records made during the year were made in relay races

and at odd distances. The increased interest taken in the sport by the colleges was a noteworthy feature of the season. The championships of the Amateur Athletic Union were held in several different cities at various times during the year. The winners of the principal events were: (indoor) 50,100,220 and 500 yards, C. M. Daniels; (outdoor) 440 yards, C. M. Daniels; (outdoor) 880 yards and 1 mile, L. B. Goodwin; 400-yard relay (four men, 100 yards each), C. M. Daniels, George South, J. H. Reilly and N. Nerich of the New York A. C.; (indoor) 200-yard, breast stroke, M. McDermott of the Illinois A. C.; (indoor) fancy diving, George Gaidzik of the Chicago A. A. C.; (outdoor), high diving, George Gaidzik; plunging, C. Brown of the Illinois A. C. A new relay record for 400 yards was made in April by C. M. Daniels, C. T. Trubenbach, N. Nerich and George South of the New York A. C., whose time was 4 minutes  $\frac{3}{4}$  seconds.

F. E. Beaurepaire proved himself to be the best amateur swimmer in England by winning the 100-yard, 220-yard and 500-yard championships, indoor, and the 880-yard and one mile championships in open water. Other amateur winners in the English events were: high diving, H. Johannsen; fancy diving, H. E. Pott; 200-yard breast stroke, indoors, H. Julin; plunging, H. W. Allason.

Yale won the intercollegiate indoor championship trophy with a total of 27 points. Pennsylvania was second with 16 points and Columbia third with 2 points. Yale also won the water polo title. J. K. Shyrock of Pennsylvania established a new record for 100 yards, his time being 1 minute. He also won the 50-yard swim. H. S. Palmer of Yale won the 220-yard, J. C. Stoddart of Yale the fancy diving and R. Loree of Yale the plunging events. In the intercollegiate outdoor championships Princeton was first, scoring 20 points. Yale was second and Pennsylvania third. H. Brown of Princeton won the quarter-mile and mile and H. Platt of Princeton, the diving events.

**SWINE.** See STOCK RAISING.

**SWITZERLAND.** A federal republic of central Europe, made up of twenty-two cantons. Capital, Bern.

**AREA AND POPULATION.** The Federal Department of the Interior gives 41,323.99 square kilometres (1 square kilometre=3861 square mile) as the latest official computation of area; of this total, 1,309.94 are under lakes. Population; in 1900, 3,315,443; according to the census of December 1, 1910, 3,765,000 (subject to revision). On the latter date population according to language was: German, 68.8 per cent.; French, 21.7; Italian, 8.3; Romansh, 1.2. Population of Bern (1909), 78,500; Zurich, 183,500; Basel, 129,800; Geneva, 121,200; Lausanne, 60,000; St. Gallen, 55,400. Marriages (1909), 27,395; births, 97,296; deaths, 62,596; stillbirths (included in foregoing), 3184; emigrants, 4915.

**EDUCATION.** Primary instruction is free and compulsory, though not strictly enforced in the Roman Catholic cantons. In the Protestant cantons illiteracy is rare. Education is controlled by cantonal and communal authorities. Primary schools (1907), 4689, with 526,243 pupils; infant 946, with 43,306 and (private) 86, with 2286; secondary, 619, with 46,223; middle, 39, with 13,051; normal, 47, with 3170. There are agricultural, commercial, and other

special schools; and six universities with a total of matriculated and non-matriculated students in 1907-8 of 8751 (women, 2230).

According to the 1900 census there were 1,916,157 Protestants, 1,379,664 Roman Catholics, 12,264 Jews. Only the Jesuits are denied religious toleration.

**INDUSTRIES.** According to the industrial census of August 9, 1905, the number of persons above the age of 14 engaged in agriculture numbered 763,915. Of the total productive area (2,088,377 hectares), 866,500 hectares are under meadows, 687,540 under pasture, 244,731 under crops, 10,449 under gardens, 24,794 under vines, 200,934 under worked forest, and 53,429 under sedges. Official statistics are lacking for areas and production of principal crops. The wheat crop is given for 1909 at 4,000,000 bushels, against 3,527,000 in 1908. The wine output in 1909, as reported by *Le Moniteur Vinicole*, was 22,220,000 gallons, against 26,400,000 in 1908. Tobacco is cultivated in three cantons. Livestock (1906): 135,372 horses; 1,498,144 cattle; 209,997 sheep; 548,970 swine; 362,117 goats. Federal supervision extends over 1,119,270 acres of forest tract; during 1909, 22,661,790 trees were planted, and 1,889,931 cubic metres of timber were cut. In 1909 there were 188 establishments for pisciculture; fry, 64,259,500. Output from the salt districts (1907), 580,339 quintals. Output of the cement works (1909), 583,367 metric tons. The agricultural enterprises numbered, according to the industrial census of 1905, 250,066; arts, trades, industries and commerce, 242,543; domestic industries, 71,413. There were (1907) 161 breweries; output, 2,435,544 hectolitres. Sale of alcohol (federal) in 1908-9 amounted to 113,600 cwt. for human consumption and 117,200 cwt. for industrial purposes. The watch industry has fallen off since 1906, in which year there was an increased demand for the Swiss product. There are reported to be 2100 dairies, devoted largely to the supplying of the numerous chocolate, condensed milk, and cheese factories.

**COMMERCE.** The trade for three years is given in thousands of francs as follows:

	1907	1908	1909
Imports, merchandise	1,687,427	1,487,149	1,602,140
Imports, money	48,746	46,827	39,968
Exports, merchandise	1,152,938	1,038,437	1,097,666
Exports, money	36,042	21,366	39,894
Transit	1,139,526	1,021,847	.....

The value of the important articles of special commerce is given below for 1909:

Imports	1000 fr.	Exports	1000 fr.
Cereals, etc.	180,900	Cottons	219,100
Silk	162,000	Silks	157,700
Coal	93,100	Watches	126,000
Cottons	72,000	Machinery	67,400
Woolens	64,500	Spun silk	58,600
Animals	63,200	Cheese	57,800
Chem. prods.	51,800	Raw silk	54,500
Cotton (raw)	50,500	Chem. prods.	47,400
Prec. mets.	49,500	Chocolate	32,100
Iron	47,800	Milk	31,700
Machinery	42,500	Skins	19,600
Wine	38,600	Woolens	15,200
Iron mfrs.	32,700	Straw goods	14,300
Sugar	32,500	Jewelry	14,000
Timber	30,500	Iron mfrs.	12,300
Meat	28,900	Cotton yarn	12,300
Leather	26,800	Woolen yarn	12,000
Wool	25,400	Prec. mets.	11,700
Cotton yarn	20,300	Animals	11,600

Countries of origin and destination, with value of trade in 1000 francs:

**COMMUNICATIONS.** For 1909, 4923 kilometres (3059 miles) of railway are reported in operation; cost of construction (to end of 1907), 1,572,159,097 francs; receipts (1907), 202,614,905; expenditure, 136,331,774. The St. Gothard Railway was acquired by the confederation in 1909, making the fifth important line to be taken over. Telegraph lines (1909), 2280 miles; wires, 16,015; offices, 2350. Telephone lines, 16,560 miles; wires, 167,700. Telegraph and telephone receipts for the year, 14,781,328 francs; expenditure, 14,438,847. Post-offices (1909), 1950; receipts, 54,049,707 francs; expenditure, 50,313,648.

**FINANCE.** The unit of value is the franc, worth 19.3 cents. The revenue and expenditure for three years are given below in francs:

	1907	1908	1909
Revenue .....	145,914,260	147,391,133	155,678,421
Expenditure ...	139,310,086	150,879,386	158,842,817

Budget estimates for 1910 are seen below in thousands of francs:

Revenue	1000 fr.	Expenditure	1000 fr.
Customs .....	71,383	Posts & Rys. ....	72,963
Posts & Rys. ....	71,236	Military .....	40,499

Total .....	154,130	Total .....	159,450

The public debt amounted, January 1, 1910, to 222,831,785 francs.

**ARMY.** The Swiss army is a National Militia in which service is compulsory between the ages of 17 and 49 with few exemptions permitted. By a law promulgated January 25, 1910, the Federal Military Department was reorganized and made to include the chancellery, the general staff, and various sections or divisions, 12 in all, concerned with the various arms or services. The schemes of military service provides that a recruit who in many cases has received military or gymnastic training in schools or cadet corps, shall be liable for 13 years service in the Auszug or Elite, then 12 years in the Landwehr, and 6 years in the Landsturm. In the first year in the Auszug the recruit course is 92 days for the cavalry, 77 days for the artillery, and 77 days for the infantry and

every subsequent year there are repetition courses of 13 days. This makes the total service during the 13 years in the Auszug (10 years for cavalry) 141 days for the infantry, 148 for the engineers, 160 for the cavalry, and 163 for the artillery. With the increase of service in the Auszug, the amount required for the Landsturm was diminished through mounted troops were to be included in the latter. The effective strength of the Swiss Army in 1910 was given as follows: Auszug or Elite, 140,784 men; Landwehr, 68,546 men; total, 209,330 men. Landsturm, 56,621 men. These figures were almost the same as those for the preceding year. In 1910 the Auszug was organized into 96 battalions of infantry, 8 battalions of rifles, 24 squadrons of dragoons, 48 field batteries of 6 guns each, 2 mountain batteries, 10 position batteries, and 2 companies of light horse. In the Landwehr there were 96 battalions of infantry, 8 battalions of rifles, 24 squadrons of dragoons, 8 field batteries and 15 position batteries. This makes a field army of about 200,000 men available for service. In addition to the armed divisions of the Landsturm mentioned above the enrolled strength could be brought up to about 300,000 men. In 1910 the war budget was 40,499,000 francs, or an increase over previous years in consequence of the provisions of the legislation of 1907 where provision was made for increasing the size of the army and improving the equipment. In April 4,500,000 francs was appropriated for fortifications at St. Gothard and St. Moritz and during the year other large appropriations were made for equipment, etc. The Swiss army was being re-armed with a new magazine rifle of high muzzle velocity.

**GOVERNMENT.** A federal council of seven members exercises the executive authority. This council is elected for three years by the National Assembly, and presided over by the president, who, with the vice-president, is elected, also by the assembly, for one year from among the council members. The National Assembly, the legislative body, consists of two chambers—the National Council (187 members) and the Council of State (44 members). Each canton is sovereign within its boundaries save for the restrictions imposed upon all by the federal constitution. President (January 1 to December 31, 1910), Robert Comtesse; vice-president, Marc-Emile Ruchet. Heads of departments in 1910: War, E. Müller; Justice, Dr. E. Brenner; Finance, J. A. Schobinger; Commerce, etc., Dr. A. Deucher; Posts and Railways, Dr. L. Forrer; Interior, the vice-president.

An important referendum on the question of constitutional reform was submitted to the people, having received 142,000 signatures. It demanded the introduction of a system of proportional representation in elections for the National Council. The people rejected it, however, by a vote of 262,066 against 238,928. An amendment was recommended by the Federal Council giving the central government control over the automobile traffic and aerial navigation. Floods in June caused damage amounting to nearly \$5,000,000.

**SYPHILIS.** See ARSENO-BENZOL.

**SYRACUSE UNIVERSITY.** An institution of higher learning at Syracuse, N. Y.,

founded in 1870. The number of students enrolled in the various departments of the university in 1910-11 was 3300 while the faculty numbered 250. Among the noteworthy benefactions during the year were the following: \$300,000 from John D. Archbold; \$50,000 from Mrs. Russell Sage; and \$20,000 from the late John S. Huyler. Courses in agriculture and forestry were established. There were no noteworthy changes in the faculty during the year. The productive funds of the university amounted to \$2,094,378, and the total income to \$827,376. The library contains about 80,000 volumes. The Chancellor is Rev. J. R. Day, LL. D.

**TARIFF.** DISCUSSION OF THE PAYNE-ALDRICH ACT. The most significant fact with reference to tariff history of 1910 was the revolt against the Republican party on the ground that the Payne-Aldrich tariff was not a fulfillment of the party's promises in 1908. The discussion of the tariff was, therefore, mainly political, bearing upon the special rates of the new duties and their justification rather than on the general question of protection as against free trade, or the general effects of the protection policy. Newspapers and magazines kept up a running fire on some of the schedules throughout the year. The "insurgent" Republicans, among whom Senators Dolliver and Bristow were prominent, engaged in the controversy with telling effect. The woolen, the cotton, the rubber and the metals schedules were the most frequent objects of attack. The popular literature of the year supplied an abundance of concrete data as to the exact deals involved in the making of rates, the parties especially interested, and many of the specific results achieved. Senator Bristow made an especially pointed attack against Senator Aldrich's connection with the making of rubber schedules owing to the latter's connection with the United States Rubber Company and the Inter-Continental Rubber Company of America. Opponents of the tariff pointed out in detail how the rates had been made extremely complex, how the specific and *ad valorem* rates had been combined so as to give specially high protection for the particular products of special manufacturers. Thus under the extremely detailed and complicated cotton schedules were instances of discrimination in favor of one group of mills by means of cumulative specific duties, beginning with 5¼ cents for a square yard and adding two cents, then one cent, according to weight or peculiarity of weave. The belief was thus strengthened among its opponents that the tariff had been made by log-rolling methods; that special interests had been allowed to write their own schedules; and that so-called experts had deceived and confused Congress in the interest of particular lobbyists.

The Republican promise upon which the tariff was revised in 1909 stated that the rates should allow, "a reasonable profit to American industries." This figured in the discussions of

the year with reference to the cotton and some other schedules. Thus many of these duties were increased by an amount ranging from forty to eighty-five per cent., although it was shown that the profits of large cotton mill companies ranged from an average of twelve per cent. to an average of fifty-four per cent. for a period of nine years. Moreover these same companies had accumulated an average surplus of over sixty per cent. of their capital in the same period. Senator Dolliver, among many instances, cited the Diamond Rubber Company, Akron, Ohio, which in ten years had declared stock dividends increasing its capital from \$50,000 to \$10,000,000.

A point of special controversy was whether the average duty was less under the Payne-Aldrich act than under preceding tariffs. This was declared by the President and others to be the case and to be proof of revision downward; others denied the fact; and still others were disposed to point to the undoubted increases in the rates of many of the most important articles of general consumption. On February 12, in New York City, President Taft made a defense of the tariff. Although the party had not specifically promised a revision downward, he quoted from a special statistical report that had been prepared for him stating "you get decreases on 654 items, involving a consumption value of \$5,000,000,000." He specified schedule by schedule the number of items on which reduction had been made and the total value of things consumed in the United States to which these reductions applied. This occasioned universal comment. In *The Independent* (September 8), Senator Dolliver made an analysis of the data which had furnished the basis for the President's speech. He claimed that "nearly all the \$5,000,000,000 of consumption is made up either of food products which we export or of raw materials like coal, iron ore, petroleum and hides of cattle, or partly manufactured materials like pig iron, scrap iron, tonnage steel and lumber ready for planing mills. The public has asked and asked in vain for someone to point out a single reduction on any article ready to enter into consumption which has a commercial significance of any sort."

Similarly the argument that the tariff was a protection for American labor was attacked by showing that in many cases where the rates were high and where a combination of producers existed the labor cost was only a few per cent. of the entire cost. A report presented to the annual convention of the manufacturers of vehicles and agricultural implements claimed to show that, though the United Lead Company, controlling fully eighty-five per cent. of the output, enjoyed protection ranging from forty to seventy-nine per cent, wages were only four per cent. of the total cost. Likewise, it was claimed the Sugar Trust, with a wages bill of only three per cent. of the total cost of production, had seventy-one per cent. protection. Similar, though less striking, figures were presented with reference to the Meat Trust, the Glucose Trust, and the woolen and cotton industries. In this connection it was asserted that American workmen are among the consumers of the articles made high by the tariff; that wages are naturally high in the United States because of the favorable natural conditions in which labor is employed; but

that, with free immigration to supply hordes of cheap laborers, it is pure sophistry to contend that the protective system is necessary in order to safeguard American workers and standards of living from competition of the pauper laborers of Europe.

**MINIMUM RATES.** The Payne-Aldrich law, although abolishing reciprocity treaties and making no provision for new ones, provided that the President, after due investigation of the tariff rates of other countries should issue a proclamation declaring either the maximum or the minimum tariff in force against the goods of each country. The maximum tariff is simply the addition of 25 per cent. *ad valorem* to the rates of the minimum tariff. It thus sometimes doubles the latter. By April 1, the date set for the completion of these proclamations, 134 of them had been issued, all of which declared the minimum schedules applicable. Thus the entire import trade of the country is carried on under the minimum rates. The law provides, however, that the benefits of these rates may be withdrawn after ninety days' notice.

**TARIFF BOARD.** In September, 1909, President Taft had appointed Messrs. Henry C. Emery, Alvin H. Sanders and James B. Reynolds as a Tariff Commission or Board under the provisions of the Payne-Aldrich act. This board was authorized to secure such information as the President might require in applying the maximum and minimum schedules of the tariff act and such as customs officers might need in the administration of the tariff laws. A number of conservative members of Congress took the view that this commission would have only minor duties to perform, that its functions could not be stretched so as to provide any basis for tariff revision but that on the contrary it would be of occasional use only in the administration of the existing law. President Taft, especially after the vigorous denunciation of the 1909 tariff, did not take this narrow view of the functions of the commission; and, at his special request, Congress, in May, appropriated \$250,000 for the activities of the commission. With the spread of the view that the tariff should be scientifically revised on the basis of information secured by the commission there appeared various discussions of the difficulties involved in such a procedure. By scientific revision in this connection was meant a revision on the basis of differences in cost between the United States and foreign countries. It was pointed out that ascertainment of costs of production both at home and abroad would be extremely difficult on account of the great variety of conditions, the reluctance of producers to furnish information, and the uncertainty as to the reliability of the information furnished. The element of time was considered important also; during the many months which such revision would require business would be in a continual state of uncertainty. Then the rates must be altered whenever cost conditions changed either here or abroad. This again would introduce uncertainty. Moreover, since cost conditions vary in different countries a special schedule would be required for protection against each country. Differences in the cost of transportation would be an added element of complication. The Republican platform declared that it favored "a reasonable profit to American industries;" to determine what constitutes such profit would likewise in-

volve great difficulties. To these must be added the political obstruction set up by free traders, by politicians pledged to the established order, and by those industries now receiving special favor.

Professor Taussig, writing in the *Atlantic Monthly*, pointed out that the plan of revision on the basis of the difference in cost, if carried to its logical limit, would have the effect of annihilating foreign trade. The doctrine in its full possibility would mean protection for all lines of production, making the importation of foreign goods impossible. To draw the line somewhere short of this extreme is difficult. We now have duties of more than 100 per cent.; Senator Aldrich, in the debate on the Payne-Aldrich bill, said he would vote for as much as 300 per cent. Professor Taussig raised the question why it should be deemed necessary to equalize differences in cost at all. This process implies that prices will be raised in this country; that American wages will buy less than before, and that international trade will be restricted. While pointing out the almost insuperable difficulties confronting the Tariff Board he showed that it should reveal the undue gains of monopolized industries, and the extent to which there are businesses entitled to a rightful consideration in future tariff making.

Late in September the Tariff Board met in Washington and laid plans for an investigation of Schedule K, the woolen schedule. It was stated that the cotton and metals schedules would be taken up thereafter, and that at least five schedules would probably be thoroughly scrutinized during the first year's work. Somewhat later Mr. James B. Reynolds of the board was abroad seeking information in German industrial centres as to the conditions of production and the effects of the American tariff. He was reported as not being enthusiastically received.

**CANADA. CANADIAN RATES AND RECIPROCITY.** In carrying out the provisions of the Payne-Aldrich law, which gave the President until April 1, 1910, to decide whether the maximum or the minimum tariff should be applied to different countries, the greatest difficulty was met in the case of Canada. This country has three tariffs: a very low one applying to only a few British goods; an intermediate one applying to some half dozen countries with which special trade conventions have been made; and the general tariff for the rest of the world, including the United States. The difference between these last two is very small. Americans claimed that the policy of preference for goods imported from the British Isles, the conclusion of a treaty with France giving that country favorable rates, and the existence of the intermediate tariff were discriminations against the United States, and that, therefore, the maximum rates should apply to Canadian goods. President Taft, being very anxious to secure an arrangement that would insure the largest volume of trade between the two countries, arranged an interview at Albany with Earl Grey, Governor-General, and Mr. Fielding, Minister of Finance. Other conferences and correspondence followed, settlement being reached late in March. Canada granted to the United States its intermediate tariff on thirteen schedules, including forty articles. The chief items involved were cotton-seed oil, drugs, window glass, leather, china, porcelain, soap, perfumery, photographs and works

of art. The total trade in these articles is about \$5,000,000.

Throughout the year the matter of reciprocity between the two countries was widely discussed. American writers pointed out that the United States would gain by the enlargement of its free trade territory; for there are many indications that agricultural products are falling behind the increase in population and that our exports in the future will be less and less agricultural and more and more industrial. Some middle-western States that only a few years ago were almost exclusively agricultural are now devoted very largely to manufacturing. In New England particularly was the demand for Canadian reciprocity strong and insistent; but at the same time it was evident that States like New York, Ohio, and Illinois would equally profit by the free importation of Canadian manufactures. On the other hand Canadian manufacturers declared that they would lose more than the Canadian people as a whole would gain. The Montreal Board of Trade and Chamber of Commerce voiced the sentiment of commercial and industrial interests of the Dominion in their declaration that, while the United States might be ready for reciprocity, Canadian industries were not yet sufficiently developed under the stimulus of protection to enable them to withstand a free importation of American goods. Following this declaration some American writers demanded that, if reciprocity were impossible, the American restrictions on the products of Canadian fisheries, farms, forests and mines should be removed. On December 16, 1000 Canadian farmers presented formally to Premier Laurier demands for immediate downward revision of the Canadian tariff. He bade them await the outcome of the reciprocity negotiations.

Early in the year President Taft, in an interview with the editor of the *Toronto Globe*, had declared himself strongly in favor of reciprocity and had stated that he would soon open negotiations to establish greater freedom of trade between the two countries. His difficulty in this matter was greatly increased by the Payne-Aldrich Act, which repealed all reciprocity treaties, and made no provisions for new ones. In September the President secured the consent of the British Ambassador, James Bryce, to open direct negotiations with Canada. In October the Canadian government signified its willingness to take up negotiations. Two representatives were sent from Washington in November; after considerable consultation adjournment was made to Washington in January.

**GREAT BRITAIN. The Issue.** Since 1904, when Mr. Joseph Chamberlain proposed the imposition of import duties in connection with the policy of colonial preference in trade, tariff reform has been a foremost topic of political discussion. Mr. Chamberlain proposed to put duties of two shillings per quarter on grains, five per cent. on foreign meats and dairy products, and ten per cent. on foreign manufactured goods. He exempted maize and bacon. Imports from the British colonies were to be exempt or they were to be taxed at lower rates. Immediately thereafter the Tariff Commission was appointed to examine the probable effect of the proposed reforms. Up to the close of 1910 this commission had submitted exhaustive reports on the following fourteen indus-

tries: iron and steel, cotton, wool, hosiery, lace, carpets, silks, flax, hemp and jute, engineering, including ship building, pottery, glass, sugar and confectionery, and agriculture. It prepared also a number of memoranda giving comparisons and other statistical information. Following the introduction of the Finance Bill in April, 1909, a direct political issue was joined between tariff reform with colonial preference on the one hand and free trade and numerous social reforms on the other. The organizations supporting tariff reform are the Imperial Tariff Committee, the Tariff Reform League, the Woman's Imperial Tariff Reform League, and the Liberal Union Club. Those opposing include the Constitutional Free Trade Association, the Free Trade Union, the Woman's Free Trade Union, and the Cobden Club.

*Arguments for and against.* The arguments for Tariff Reform are based primarily on the needs of revenue to carry out proposed social reforms, such as old-age pensions and labor exchanges, and the necessity of cementing all parts of the British Empire by favorable trade relations. In addition there is a variety of arguments based more or less directly on the advantages of the protective system. The prosperity of Germany and the United States and keen rivalry of these with British producers both at home and throughout the world are pointed to. The tariff is made responsible for the remarkable industrial development of England's great rivals. The need of import duties to check dumping, or at least to put dumped articles under tribute to the Exchequer, is appealed to. It is argued that import duties on foreign manufactures will increase employment at home. This increased employment would in turn increase the demand for goods leading to further increase in employment. Some argue that food prices would not be made higher because England would receive the surplus of the world. Others argue that even should food prices be made higher the necessity of an independent food supply in time of war would justify the loss. Then it is argued that only by the imposition of a system of import duties can Great Britain force other nations to grant her favorable trade agreements.

Arguments against the proposed reforms are based primarily either on the standard theoretical arguments for free trade and against protection or on the appeal to the experience of the past. It is argued that protection means the creation of groups of special interests; this means inevitably political corruption. The prices of food and raw materials must necessarily be higher. The imposition of import duties, it is said, will lead to increased duties in other countries. Protection will involve a reduction in the volume of trade and, therefore, in the volume of employment. It will, therefore, increase the amount of unemployment at the same time that it increases the cost of living.

One of the most striking arguments of the year was based on the essential difference between the economic positions of Germany and the United States on the one hand and England on the other. It was pointed out that England is vastly superior to both in the volume of her imports and exports. But whereas the United States imports only a small amount of food products and raises practically all her raw material and Germany raises by far the

greater portion of her food products and raw materials, England imports her food, drink, tobacco, cotton, wool, timber, and many other raw materials of manufacturing. It was roughly estimated that forty per cent. of all her imports represent food; and that between twenty and twenty-five per cent. of all the wealth annually consumed in the United Kingdom is represented by imports. Moreover, conditions in England to-day are not at all comparable to those existing in the United States and Germany when they adopted a protective policy. Thus it was argued that the volume of England's trade, and especially the nature of that trade, and her marked contrast with the Germany and the United States of thirty or forty years ago, make comparisons with those countries invalid and the experiment of protection extremely perilous. In this same connection it was pointed out that the foreign trade of such free trade countries as Holland and Belgium has increased as rapidly as that of the great protected countries.

The Association of Chambers of Commerce in a vote on resolutions favoring tariff reform voted fifty chambers for and twelve against, as compared with forty-six for and thirty-one against in 1909.

*FRANCE.* Early in the year a new tariff was adopted, to become effective April 1. This tariff was under discussion during most of the preceding year. It involved several hundred increases and very few reductions in the rates of the general tariff, and a large number of increases in the minimum tariff. It was thus not a wholesale revision, but more in the nature of revision one schedule at a time. The organization of a permanent tariff bureau was considerably advanced in favor by the discussion on the tariff schedules. It was pointed out that general revision involves imminent danger of tariff wars with other countries; this danger may be avoided by revising piecemeal. In the course of this latest revision it was agreed to leave untouched any rates affected by treaty regulating the Franco-Swiss trade; and to grant Canada the benefit of the minimum rates in exchange for her intermediate tariff.

*GERMAN RATES.* Early in the year a general tariff war was threatened between the United States and Germany. The indications were that German rates were to be advanced on February 7, but before this date agreement was reached whereby existing conditions were maintained. The controversy dealt mainly with American meat products. Had Germany increased her rates on these the penalty of twenty-five per cent. *ad valorem* provided by the Payne-Aldrich law would have been imposed on German goods.

In October and November trouble again became acute over the potash trade. American manufacturers of fertilizers have been dependent on German supplies of potash. With a view to conserving the supply, and also perhaps with a view to favoring the potash syndicate, the German government imposed an export duty on potash. This meant a higher price to the American purchasers and led to a stubborn controversy over existing contracts. The American State Department sent Mr. M. H. Davis as special commissioner to bring about an adjustment. The Americans offered to compromise by paying fifty per cent. of the export tax. This was not accepted on the ground that the law could not be abrogated for the benefit of

a special group of purchasers. The export tax if paid in full would have involved an extra charge of \$4,000,000 per year for seven years. Had it not been possible to reach a temporary compromise, as was done early in November, it would have been necessary for the United States to have imposed the maximum tariff against German goods. The final settlement of the matter was still occupying diplomats and traders at the close of the year.

**FREE TRADE CONGRESS.** At the Free Trade Congress which met at Antwerp in August a number of papers were presented by German statisticians and economists showing that the German tariff had caused the prices of wheat and meat to rise more rapidly than in the English markets; that the import duties levied in the interest of the farmers had laid a great burden upon the industrial classes. It was also stated that this rise in the value of agricultural product due to the tariff stimulus was the chief cause of extravagant speculation in agricultural lands. Others pointed out the connection between the protective system and the development of kartels or trusts.

**AUSTRALIA.** Beginning with July the customs of the Commonwealth were to be used to safeguard consumers from adulterated goods. Regulations were sent out to all countries notifying those exporting goods to Australia that such must be marked so as to designate their true nature. Thus, if the soles of shoes are made of paper, or if textiles are composed in part of loadings, these facts must be stated plainly on the packages and the goods.

**TARIFF BOARD.** See **TARIFF**.

**TASMANIA.** An island state of the Australian Commonwealth. Capital, Hobart. Area, 26,215 sq. miles. Estimated population, December 31, 1909, 186,860. For details, see **AUSTRALIA**. The executive authority is vested in a governor, appointed by the British Crown and assisted by a responsible ministry. The legislative power devolves upon a parliament of two elective houses, the Legislative Council and the House of Assembly. Governor in 1910, Major-General Sir Harry Barron; Premier (from June 19, 1909), Sir Elliott Lewis. Tasmanian Parliament was opened on July 12. The legislative programme proposed, among its features, compulsory land purchase, the opening up of Crown lands, tax on unimproved land, an income tax, establishment of wage boards, etc.

**TAWNEY, JAMES A.** See **UNITED STATES AND MINNESOTA**.

**TAXATION. THE CORPORATION TAX. ITS PROVISIONS.** The operation of the corporation tax, the proposed income tax amendment and various minor movements gave a special prominence to the problem of taxation during the year. The corporation tax, which was a part of the Payne-Aldrich tariff measure, provided that "every corporation, joint stock company, or association organized for profit and having a capital stock represented by shares, and every insurance company shall be subject to pay annually a special excise tax equivalent to one per centum upon their entire net income over and above \$5000." It was expected that the returns of the corporations on the basis of which this tax should be collected would be matters of public record, open to the inspection of the public, but in February it was discovered that a law of 1882 prohibits the employment of per-

sons in the District of Columbia by any executive department unless there be specific appropriation therefore by Congress. Those hostile to that portion of the new law making the corporate statements public records open to inspection pointed out that the reports could not be publicly displayed without special clerical work for which a special appropriation was necessary. President Taft recommended to Congress that it appropriate \$50,000 to carry out the publicity clause. The smaller corporations were especially bitter in their opposition to this on the ground that their trade secrets would be revealed and they would become easy victims of unfair competition by larger concerns. Late in the year the Treasury Department made available general summaries of the reports of some large corporations. At the same time it was announced that the returns of any corporation whose stock is listed on any stock exchange or whose stock is advertised by the corporation itself for sale to the public shall be open to inspection by any one on written application; the returns of others may be inspected only for very special reasons.

**ITS CONSTITUTIONALITY** Meanwhile the law had been taken to the Supreme Court to have its constitutionality tested. One of the chief arguments against the constitutionality presented in the public prints was that this is an excise tax on the privilege of doing business in the corporate form; this latter being a privilege derived by franchise from State authorities only, Congress can not impose a burden on it without invading the sovereignty of the States. President Taft in recommending the tax had stated that it is laid "upon the privilege of doing business as an artificial entity and the freedom from a general partnership liability enjoyed by those who own stock." While, therefore, it was argued, a tax on the business of a corporation might be constitutional, a tax on the franchise, that is, on the special privileges which the State confers upon the corporation, is an invasion of the State's rights. It was also contended that this is a special tax on the corporate form of organization, and is, therefore, a discriminatory tax and involves the iniquity of special legislation.

One of the points involved in the question of constitutionality is whether the corporation tax is a direct tax within the meaning of the constitution. Since the constitution requires direct taxes to be apportioned among the States according to population it is evident that if the corporation tax should be declared a direct tax its assessment would be impossible. It seemed that the Supreme Court would not be likely to declare this a direct tax since it is not a property tax, but a special tax on artificial personalities created for the purpose of carrying on business. In the income tax decision of 1895 the Supreme Court had declared direct taxes to be poll taxes, real and personal property taxes and taxes on the income of real and personal property; a corporation tax is none of these. While some argued that the tax could not apply to interstate corporations on the ground that the power of Congress to regulate commerce does not extend to them; others contended that the corporation tax was not levied on the basis of the congressional power to regulate commerce between the States and with foreign nations but under the general power to levy and collect taxes, duties, imposts and ex-

cises. As to the argument that the corporation tax invades the sovereignty of the States, it was pointed out that although in numerous decisions the Supreme Court had upheld the principle that in our dual federal system neither order of government shall tax the agencies or instrumentalities of the other, nevertheless, Justice Brewer was careful to state that "the exemption of State agencies and instrumentalities from national taxation is limited to those which are of a strictly governmental character." Since the corporation has no "governmental character" a tax upon it would not violate the principle of State rights. Thus when the constitutionality of the national inheritance tax was before the Supreme Court, it was argued that, since the State granted and regulated the right to inherit property this tax was an invasion of the sovereignty of States; but the Supreme Court held that the tax was a burden upon the recipient of the inheritance and not upon the power of the State to grant or regulate inheritance privileges. Likewise in upholding the 10 per cent. tax on State bank notes, the tax on the sales of shares of stock, the excise tax on the business of railways and other transportation corporations, and other similar taxes, the Court rejected the argument that these taxes invaded the sovereignty of the State. As to the contention that the law is unconstitutional because it singles out corporations for special taxation, it was answered that this argument would have validity only when it is shown that the classification contained in the law, whereby corporations and joint stock companies doing business for a profit are separated from other businesses, is not a natural classification. Senator Root argued that this classification is natural, since many States are already using it. Ex-Senator J. B. Foraker's brief against the corporation tax was filed December 28.

**CORPORATION TAX RETURNS.** The report of the Commissioner of Internal Revenue showed that 262,490 corporations had submitted returns under the corporation tax. They had \$52,371,626,000 capital stock; \$31,383,952,000 bonded and other indebtedness; and aggregate net income of \$3,125,481,000, or about 6 per cent. on the capital stock. The amount collected under the tax up to October 1 was \$26,872,270. New York corporations numbered 31,132; they had more than one-fifth of the capital stock, one-fourth of the indebtedness, and one-fifth of the net income of all corporations; their total tax amounted to \$5,772,650. Pennsylvania reported 18,362 corporations, and Illinois, 17,908. The corporations were distributed as follows: financial and commercial, 29,812; public service, 24,252; industrial and manufacturing 89,384; mercantile, 54,673; miscellaneous, 64,359. The public service corporations had more than one-third the aggregate indebtedness, and more than one-fourth the total net income of all. Industrial and manufacturing corporations had two-fifths of the aggregate capital stock, less than one-fourth the total indebtedness, and two-fifths the total net income.

**INCOME TAX AMENDMENT.** Since the decision of the Supreme Court in 1895 declaring the income tax provision of the Wilson-Gorman Act of 1894 unconstitutional, there has been more or less agitation for an amendment to the Constitution giving Congress power to levy a tax on incomes. In that decision the Court held

that a tax on the income from land is a direct tax, within the meaning of the constitution, and must therefore be apportioned among the States according to population. This being impossible without violating principles of equity the whole law was discarded. At various times the Democratic party in its national platform pronounced in favor of an income tax amendment. President Roosevelt and President Taft likewise expressed themselves in favor of it. Congress consequently submitted to the States a proposed sixteenth amendment as follows: "Congress shall have the power to lay and collect taxes on incomes from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration." A good deal of controversy was aroused by the clause "from whatever source derived," because this would make it possible for Congress to lay a tax on the income from State and municipal bonds. In a special message to the New York Legislature, Governor Hughes, while favoring the amendment in general, expressed decided opposition to this clause, because it would endanger the borrowing power of the States. Senator Root and others, however, took the view that Congress would not be required by this amendment to levy on State and municipal bonds, and in the exercise of its discretionary power would not be likely to do so. Moreover, the courts, following a long line of precedents, would be likely to forbid the taxation of such bonds by Congress. Professor Seligman made the point that, if income from all such investments is assessed uniformly, the relative values of the investments would remain unchanged; consequently, there is no reason for the special exemption of State and municipal bonds; in his view special exemption would result in a rise in the value of such bonds, thus amounting to a special gift to the States and minor civil divisions.

Of the State legislatures that have considered this proposed amendment the following have voted for ratification: Alabama, Georgia, Illinois, Kentucky, Maryland, Mississippi, Oklahoma, and South Carolina. These have voted against: Massachusetts and Rhode Island. In Louisiana, New York, and Virginia resolutions for ratification passed one branch of the legislature, but failed of passage in the other.

**INHERITANCE TAX.** One of the tendencies of State taxation is increased resort to some form of taxation of inherited property. Such a tax is justified on various grounds; as an excise on the right to succeed to property; as a means of reducing the size of "swollen fortunes"; as in part compensation for taxes evaded in the past; as due to society or the State for favors of one kind or another during the accumulation of wealth; or as fully in harmony with the doctrine that taxes should be levied in proportion to ability to pay. The inheritance tax has come steadily into more general favor both because of the increasing demands of public expenditures and as a substitute for the personal property tax which is being abandoned. All the States now have inheritance taxes except Alabama, Florida, Georgia, Indiana, Mississippi, Nevada, New Mexico, Rhode Island, and South Carolina. These taxes nearly uniformly exempt small sums, especially for the immediate family; they are usually graduated both by amounts and by degrees of relationship.

**NEW YORK LAW.** The New York law of 1910 is the most advanced legislation yet enacted on this subject. It makes the amount of the inheritance to each individual recipient rather than the entire estate the basis of assessment; and it establishes highly progressive rates, especially on sums going to collateral heirs and non-relatives. It first provides exemptions of \$5000 or of \$500 for two groups of immediate family relatives. These groups are respectively (a) father, mother, widow, or minor child; and (b) husband, adult child, brother, sister, son's wife or widow; daughter's husband, adopted child, or lineal descendant. The amounts inherited are divided into five classes: up to \$25,000; in excess of \$25,000 up to \$100,000; in excess of \$100,000 up to \$500,000; in excess of \$500,000 up to \$1,000,000; above \$1,000,000. The rates of taxation on these five classes for both groups of relatives already mentioned are respectively, 1, 2, 3, 4, and 5 per cent. For all amounts bequeathed to non-relatives the rates of taxation are five times as much. Thus an inheritance of more than \$1,000,000 going to a non-relative would be taxed 25 per cent. The law, however, completely exempts religious, educational, and charitable institutions. As with most States inheritance tax laws, this law applies to most of the property of non-residents, thus making double taxation highly probable.

**DOUBLE TAXATION.** The increased resort to the taxation of inheritances by the States led to significant legal entanglements late in the year. The State of Wisconsin began suit against the estate of W. H. Tilford, and Minnesota against that of John S. Kennedy. Both these men had been residents of New York and had owned stock respectively in the Chicago, Milwaukee and St. Paul and the Northern Pacific railroads. Wisconsin demanded \$60,000 and Minnesota \$1,500,000 tax. These cases were expected to test the legality of the inheritance tax as applied to the property of citizens of other States.

The report of the New York State Comptroller issued late in December stated that the new law above described was being circumvented by a change of residence. This was especially true of the owners of large estates, taxed at high rates under the new amendments. The comptroller pointed out that wealthy New Yorkers frequently have domiciles in more than one State; that in any case change of domicile to another State is easy. That all property not situated in New York is easily removed from the operations of the tax. Likewise by forming a corporation in another State and transferring property situated in New York thereto, this property may be removed from the incidence of the tax.

**OTHER STATE LEGISLATION.** Tax commissions were appointed in Illinois, Ohio, and Virginia to investigate the sources of revenue for the States and local civil bodies, and the distribution of tax burdens, and to recommend changes. The Virginia Commission is particularly to investigate the plans for the separation of State and local taxes. The Ohio commission is a permanent one with very extensive administrative and judicial powers over local taxes, and the taxation of railways and public service corporations. The Illinois commission is to report by January, 1911; it included as experts Professors Kinley of the University of Illinois and Merriam of the University of Chi-

cago. The object of the Ohio commission is to centralize the taxes, and equalize tax burdens, as has been done recently in Minnesota, Wisconsin, Michigan, and West Virginia. Oklahoma classified railways for taxation according to ratio of operating expenses to gross receipts; and imposed a license tax on all business corporations, other than insurance and banking companies. Massachusetts required the distribution of the proceeds of the corporation tax on resident shares to the site of the industry in the State instead of residence of shareholder; and required trust companies to pay the usual personal property tax on personality of which they are trustees. Mississippi exempted permanent factories for five years after construction. Delaware levied a tax on telephone companies, based on miles of wire and number of transmitters. Oregon began the taxation of persons or companies developing water power. Minnesota imposed a tax on elevators based on the number of bushels of grain handled.

**THE INTERNATIONAL TAX ASSOCIATION.** The fourth annual conference of this association was held at Milwaukee, August 30 to September 2. The special subjects for consideration were the general property tax, railway taxation, and the experiences of Iowa, West Virginia, Kentucky and Ohio in matters of taxation. Special papers were read by Professor Bullock on the property tax in Switzerland and by Professor H. C. Adams on the income tax as a substitute for the personal property tax. A special committee appointed at the 1909 session brought in report on the causes of failure of the general property tax. The report of this committee and the discussion in general were severely derogatory to the personal property tax. As has been the case for many years when tax officials or economists have spoken on this tax, it was declared to be unsound both in theory and in practice. This conference seemed to develop considerable favor for the income tax as a substitute for the personal property tax. It may be doubted, however, whether an income tax as usually administered by American Commonwealths would prove more effective in taxing intangible property than the personal property tax.

**TAX ASSOCIATION, INTERNATIONAL.** See TAXATION.

**TAXONOMIC BOTANY.** See BOTANY.

**TAYLER, ROBERT WALKER.** An American jurist, died November 26, 1910. He was born in Youngstown, Ohio, in 1852, and graduated from Western Reserve College in 1872. From 1873 to 1875 he was Superintendent of Schools at Lisbon, O., and in 1875-6 edited *The Buckeye State*. In 1877 he was admitted to the bar and from 1880 to 1886 was prosecuting attorney for Columbia county. He was elected to Congress in 1895 and served until 1903, representing the 18th Ohio District. He declined renomination for the 58th Congress in 1905, and was appointed United States District Judge in the Northern District of Ohio. While in Congress he conducted the famous polygamy trial of Representative Roberts of Utah. He was prominent in settling the long-standing street railway war in Cleveland and was widely known as an arbitrator in industrial disputes.

**TAYLOR, HORACE A.** An American politician and public official, died August 5, 1910. He was born in St. Lawrence county, New York,

in 1835. At the age of ten his family removed to Wisconsin. His first business experience was in the publishing of a newspaper. He was later chosen Lumber Commissioner of Wisconsin, and was for a time chairman of the Republican State Committee. He held many Federal offices, among them the consulate at Marseilles, France, railroad commissioner in Washington, and Assistant Secretary of the Treasury. While consul at Marseilles he conceived the plan of removing the remains of John Howard Payne, author of *Home, Sweet Home*, from their resting place at Tunis to the United States. With the assistance of W. W. Corcoran, the philanthropist, who furnished the money, the body was removed and reinterred in Oak Hill Cemetery in Georgetown, D. C. He resigned as Assistant Secretary of the Treasury in 1907. Mr. Taylor was identified with the conservative branch of Wisconsin politics, but gave up active work in political matters because he could not support the policies of Senator La Follette. For many years he was identified with the management of the *State Journal*, a conservative Republican organ.

**TEACHERS' PENSIONS.** See EDUCATION IN THE UNITED STATES.

**TEACHERS' SALARIES.** See EDUCATION IN THE UNITED STATES.

**TECK, Prince FRANCIS JOSEPH LEOPOLD FREDERICK.** The brother of Queen Mary of England, died October 22, 1910. He was born in 1870, the second son of the third child of Francis, the first Duke of Teck and Count of Hohenstein. His mother was the Princess Mary Adelaide of England, sister of the late Duke of Cambridge. He was born in Kensington Palace in 1870 and in 1890 entered the British army, serving in Egypt and in the Boer war. He retired in 1902 with the rank of major.

**TELEGRAPHS.** See paragraphs on subject in articles on countries.

**TELEGRAPHY.** The merger of telephone and telegraph interests in 1909 demonstrated its advantages to both arts in 1910. The very extensive long-distance telephone system of circuits, all of a very high order of construction, was thus made available for telegraphic use.

An improved quadruplex apparatus was put into service which has made quadruplex working possible over the longest and most difficult lines. The essential factors in this result are a quick-acting pole changer which minimizes the period of current interruption and a neutral relay provided with a holding coil which is energized by the discharge of an impedance coil during the intervals of no magnetism.

The introduction of the "night letter" service met with great popularity and added a new and important source of revenue to the industry.

**TELEGRAPHY, WIRELESS.** See WIRELESS TELEGRAPHY.

**TELEPHONY.** As in 1909, much of the energy of the telephone industry was devoted in 1910 to problems of organization, the coordination of telephone and telegraph operation and to improving public relations. Important advances in the art were achieved, especially in the field of long-distance communication. The speaking range from the Atlantic coast was pushed westward to Denver with conversation from coast to coast looming up as a near probability. Progress of this type was accelerated by the invention of a new type of Pupin loading coil which permits the extensive use of the

phantom circuit in long-distance work. The new coil provides loading for two physical circuits and one phantom.

Automatic telephony made distinct gains, especially in combination with manual systems. A new type of manual switchboard which automatically performs all operations except the receiving of the call and the making of the plug-cord connection has been installed and successfully used in several western exchanges.

The use of the telephone in train dispatching was extended widely and with uniform success. The high efficiency of the telephone equipment and the increasing difficulty of securing reliable telegraph operators bids fair to turn this entire field over to the telephone within a few years.

The most noteworthy telephonic invention of the year, and possibly of a decade, is a multiplex system for which patents were issued to Major George O. Squier of the U. S. Signal Corps. Only meagre details of the system have been published but it is described as a combination of wire telephony and wireless in which ether vibrations serve as the agency of transmission and the wire as a guide. By suitable tuning, ten or more messages may be superposed on a single wire. The inventor claims that the new system is readily applicable to all existing types of installation and that it can be operated effectively with a single wire as well as a circuit.

The system is said to have been exhaustively tested between the laboratory of the Signal Corps and that of the Bureau of Standards in Washington. The announcement of the invention was received by the telephone industry with natural skepticism, but the high scientific standing of the inventor, which is fully established by other inventions and researches, is generally accepted as a guarantee of its authenticity. Major Squier has perpetually dedicated his patent rights to the government and people of the United States.

**TELESCOPES.** See ASTRONOMY.

**TELLURIUM.** See ATOMIC WEIGHTS.

**TEMPEL COMET.** See ASTRONOMY.

**TEMPERATURE.** See METEOROLOGY.

**TEMPERLEY, H. W. V.** See LITERATURE, ENGLISH AND AMERICAN, *History*.

**TEMPLEMAN, WILLIAM.** See CANADA, *Government and History*.

**TENNESSEE.** One of the East Central Division of the United States. Its area is 43,022 square miles. Its capital is Nashville.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 2,184,789 as compared with 2,020,616 in 1900 and 1,767,518 in 1890. The increase in the decade from 1900 to 1910 was 8.1 per cent. The State ranks seventeenth in point of population, whereas in 1900 it ranked fourteenth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** Coal, iron and copper are the chief mineral products of the State and there has been a great increase in their production in recent years. The coal produced in 1909 amounted to 6,328,073 tons as compared with a production in 1908 of 6,199,171 tons. According to estimates of the United States Geological Survey the year 1910 was not satisfactory from the coal producers' standpoint.

The markets were not equal to the production, in consequence of which prices were low. The production was about the same as in 1909. There were produced in 1909, 19,207,747 pounds of copper, as compared with a production of 19,710,103 pounds in 1908. According to the United States Geological Survey, the estimate of the production of 1910 showed a decrease from that of 1909. This is due to the fact that the sulphuric acid plants operated by both companies in the Ducktown district were not able to handle the fumes produced by the smelting plants when they were operated at full capacity. The successful recovery of acid at these plants has added greatly to the value of the ores mined in the district. The State ranks eighth in the production of iron. The value of this in 1908 was \$876,007 and there were produced 635,343 long tons. There were manufactured in 1908, 290,826 tons of pig iron. Zinc is mined in small quantities and in 1909 695 tons of spelter were produced. Gold is found in small quantities. The value of the product in 1910 was \$3514. There were produced also 75,714 fine ounces of silver as compared with a production of 65,300 fine ounces in 1909. Phosphate rock is mined in large quantities. Other mineral products of the State are building stone, lime, sand and gravel, and mineral waters.

**AGRICULTURE.** The acreage, production and value of leading crops in 1909 and 1910 are given in the following table:

	Acreage.	Prod. bu.	Value.
Corn, 1910.....	3,720,000	96,348,000	\$53,955,000
1909.....	3,575,000	78,650,000	55,055,000
Winter wheat, '10	910,000	10,647,000	10,434,000
'09	800,000	8,320,000	9,568,000
Oats, 1910.....	200,000	4,600,000	2,116,000
1909.....	200,000	4,000,000	2,120,000
Barley, 1910....	1,000	23,000	18,000
1909.....	1,000	24,000	19,000
Rye, 1910.....	8,000	88,000	81,000
1909.....	8,000	86,000	83,000
Buckwheat, 1910	1,000	15,000	13,000
1909.....	1,000	15,000	11,000
Potatoes, 1910..	30,000	2,400,000	1,560,000
1909.....	30,000	2,250,000	1,598,000
Hay, 1910.....	445,000	637,000a	8,536,000
1909.....	450,000	675,000	8,640,000
Tobacco, 1910...	85,000	64,600,000b	5,426,000
1909.....	73,000	53,290,000	4,156,000
Cotton, 1910...		305,000c	
1909.....		246,650	

a Tons' b Pounds c Bales.

**FINANCE.** The report of the State Treasurer for the biennial period of 1909-10 showed a balance in the treasury on December 20, 1908, of \$1,132,900. The total receipts for the period amounted to \$7,243,099 and the total disbursements to \$8,058,730, leaving a balance in the treasury December 30, 1910, of \$317,269.

**CHARITIES AND CORRECTIONS.** The State charitable institutions include the Hospital for the Insane, Middle Tennessee, Hospital for the Insane, West Tennessee, the Tennessee School for the Deaf and Dumb, the Tennessee School for the Blind, the Blind Girls' Home, Confederate Soldiers' Home, and the State Prison. The expenses of the State Prison during 1910 amounted to \$465,743. The total expenditures for the other institutions mentioned above was \$550,388.

**POLITICS AND GOVERNMENT.** There was no meeting of the State legislature in 1910 as the sessions are biennial and the last was held in 1909. The next session begins January 2, 1911. On January 1, the law prohibiting the manufacture of liquor in the State, went into effect. On April 13, Governor Patterson

pardoned Colonel Duncan B. Cooper, who with his son, Robin Cooper, had been found guilty of killing former United States Senator Edward W. Carmack on November 9, 1908. Colonel Cooper and his son were sentenced to be imprisoned for twenty years. An appeal was at once taken and on April 13 the Supreme Court of the State voted three to one confirming the judgment of the lower court as to Colonel Cooper and ordering a trial in the case of his son. Governor Patterson immediately, before reading the opinion and before the Coopers had left the capitol, pardoned the father, stating as his reasons that in his opinion neither of the defendants was guilty. He declared that they had not had a fair and impartial trial and were convicted contrary to law and evidence. Colonel Cooper was a close personal and political friend of Governor Patterson's, and it was said that the latter's victory over Senator Carmack in the primaries for the governorship, which were held not long before the killing of Senator Carmack, was due partly to Cooper's influence, the latter being one of his principal advisers and a member of his "Kitchen Cabinet." Governor Patterson was at that time the leader of the anti-Prohibitionist forces and Senator Carmack was head of the Prohibition wing. The latter after his defeat for the gubernatorial nomination became editor of *The Tennessean*, and had published editorial articles of a sarcastic nature, which deeply offended Cooper and resulted in the killing of Senator Carmack by Colonel Cooper.

Governor Patterson's administration was notable for the number of pardons which he issued. In three years and two months he granted 956 pardons, and these 152 were given to persons convicted of murder. The governor's action in granting these pardons and especially in pardoning Colonel Cooper, caused great indignation throughout the entire State, except among those who were strong partisans of the governor and Colonel Cooper, and it resulted in a strong movement against the former's re-election. This was accelerated by the charge made by three members of the Supreme Court that the governor had attempted to influence the Court in its opinion in the Cooper case. On August 4 judicial elections were held which revealed how wide was the split in the Democratic party. Nominees for judicial offices who were known as the choice of Governor Patterson had been placed in nomination in a State primary election held under rules which were severely denounced, but a remonstrant convention was held and an independent Democratic ticket put in the field. The Republican State Committee endorsed this ticket. After a spirited campaign in which Governor Patterson worked with great energy for his candidates, they were defeated by majorities ranging from 43,000 to 47,000. On August 16 the Republican party held its nominating convention at Nashville and named Captain B. W. Hooper for governor. Three days before a convention of the Independent Democrats was to have been held on September 14, Governor Patterson withdrew his name as a candidate of the "regular" Democrats in the hope that both factions of the party might be induced to unite on some other man. However, the delegates were already pledged to Hooper. The convention of Independent Democrats would not listen to overtures from the "regulars." Feeling was so strong that Senator Taylor who had come from Washington to endeavor to bring

about unity would not enter the convention hall for fear of being hissed from the platform. The Independent Democrats in their convention unanimously voted to endorse the Republican nominee. This action was greeted with great enthusiasm. A great company of old Confederate soldiers, carrying both Confederate and Union flags and shouting for Hooper, marched through the streets. The "regular" Democrats held another convention on October 6, and nominated Senator R. L. Taylor for governor. The chief issue of the Independent Democrats and Republicans was the maintenance and the enforcement of the laws of the State, especially the prohibition and election laws, and the destruction of the Patterson "machine." The election on November 8 resulted in the success of the Republican and Independent Democratic fusion and Captain Hooper was elected by a plurality of 12,325 over Senator Taylor. The vote was 133,999 for Hooper and 121,674 for Taylor. With the exception of Captain Hooper the State ticket elected was Democratic Colonel B. A. Enloe, the fusion candidate for railroad commissioner, receiving a slightly larger majority than Hooper. The legislature of 1911 will elect a successor to Senator Frazier, whose term expires in that year. Its complexion will be "regular" Democrats 64, Independent Democrats 34, Republicans 34. The fusion will extend to the election of an Independent Democrat to be United States Senator and other State officers and to prevent the repeal of any reform legislation.

**OTHER EVENTS.** In October the Standard Oil Company of Indiana was indicted on 1528 counts for accepting rebates. The fines involved ranged from \$1,528,000 to \$30,560,000.

On November 26 the Supreme Court handed down a decision in the case of J. W. Kelly & Company of Chattanooga, against the State, in which it held that the act of the legislature of 1909, prohibiting the manufacture of whiskey in Tennessee, was constitutional. The court also held that the shipment of whiskey out of the State was not in violation of the prohibition law, as it would be interfering with interstate business. Kelly & Company had been indicted for shipping whiskey to New York.

**STATE OFFICERS.** Governor, Benjamin W. Hooper; Secretary of State, H. W. Goodloe; Treasurer, R. E. Folk; Commissioner of Agriculture, John Thompson; Superintendent of Public Instruction, R. E. Jones; Comptroller, Frank Dibrell; Adjutant-General, Turley Brown; Attorney-General Charles T. Cates; Commissioner of Insurance, R. E. Folk—all Democrats except Hooper.

**SUPREME COURT.** Chief Justice, John K. Shields; Justices, W. D. Beard, Grafton Green, M. M. Neil and D. L. Lansden. Clerk, Joe J. Roach—all Democrats

**STATE LEGISLATURE, 1911.** Senate, Democrats, 25; House, 74; joint ballot, 99; Republicans, Senate, 8; House, 25; joint ballot, 33; Democratic majority, Senate, 17; House, 49; joint ballot, 66.

**TERRELL, EDWIN HOLLAND.** An American lawyer and diplomatist, died July 1, 1910. He was born at Brookville, Ind., in 1848 and graduated from De Pauw University in 1871. He afterwards studied law at Harvard College and in Europe. He practised law in Indianapolis from 1874 to 1877, when he removed to San Antonio, Texas. He took an active part in politics and

was delegate to the Republican National Convention in 1880, 1888, and 1904. From 1894 to 1900 he was a member of the Republican State Executive Committee of Texas. He was appointed American Minister to Belgium in 1889, serving until 1893. In 1889-90 he was plenipotentiary to the Slave Trade Conference at Brussels. In the latter year he was also a delegate to the Customs Tariff Conference. He conducted negotiations for the United States with the six Powers holding possessions in the Congo Basin and secured from them the protocol of December 22, 1890, which granted the United States and its citizens full commercial privileges in the entire Congo Basin. In 1891 he was a member of the Commission which revised the Berlin Treaty of 1885 and in the same year he was plenipotentiary to negotiate a commercial treaty with the Congo Free State. He was commissioner to and vice-president of the International Monetary Conference in Brussels in 1892 and negotiated, or assisted in drafting in conference three treaties subsequently ratified by the Senate. He was interested in financial affairs in San Antonio.

**TERMINAL RAILROAD ASSOCIATION OF ST. LOUIS.** See **TRUSTS.**

**TERRESTRIAL MAGNETISM.** After some preliminary cruises in the Pacific Ocean, 1905-08, on a chartered vessel, the *Galilee*, under the auspices of the Carnegie Institution of Washington, the conclusion was reached that a magnetic survey of the oceans could be accomplished more expeditiously, as well as economically, by the construction of a special vessel in which practically all iron and steel might be avoided; thus came into being a vessel, the *Carnegie*, which though in commission only a little more than a year has already, by the results obtained, justified her existence.

The *Carnegie* is a wooden built, brigantine rigged vessel of the following dimensions: Length over all, 155½ feet; length on load water-line, 128½ feet; beam, moulded, 33 feet; mean draft about 13½ feet; displacement, 568 tons; registered tonnage, 246. The chief materials used are white oak, yellow pine, Oregon pine and teak; the fastenings consist of locust treenails, copper and Tobin bronze bolts and composition spikes. There are four manganese bronze anchors of total weight 5500 pounds, with no anchor chains, but instead three 11-inch cables, each of 120 fathoms. She is primarily a sailing vessel with a total spread of 12,000 square feet of plain sail; all metal work on spars, rigging and blocks is of bronze and gun-metal. A certain amount of auxiliary power has been provided for making and leaving ports and for use in calms; this is furnished by a 150 indicated horsepower producer gas engine, built almost wholly of bronze, copper and non-magnetic manganese steel and capable of driving the vessel at a speed of six knots in calm weather. The engine was placed at such a distance from the mounts of the magnetic instruments that the very small amount of steel which had to be used for the pistons and the cams will not have a measurable effect. Henry J. Gillow of New York was the architect and the builders were the Tebo Yacht Basin Company (Wallace Downey, manager) of Brooklyn. The *Carnegie* is not only the first strictly non-mag-

NON-MAGNETIC SHIP "CARNEGIE"

34

netic vessel, but also the first sea-going one equipped with a producer gas engine. She went into regular commission in September, 1909, and made a cruise of 8000 miles in the North Atlantic, embracing the following ports: Brooklyn, St. John's (N. F.), Falmouth (England), Madeiras, Bermuda; she returned to Brooklyn February, 1910, weathering successfully the very severe gales of January and February of that year.

In June, 1910, the *Carnegie* started out from Brooklyn, under the command of William J. Peters as before, this time bound on a three years' circumnavigation cruise covering the Atlantic, the Indian and the Pacific Oceans. Proceeding along the South American Coast, she visited en route Porto Rico, Para (mouth of the Amazon), Rio de Janeiro, Montevideo and Buenos Ayres, leaving the latter port February 13 bound for Tristan da Cunha and Cape Town, where she is expected towards the end of March. The endeavor is made to secure magnetic observations on the oceans at points about 150 miles distant, on the average, as well as to make the necessary shore control observations at the ports of call. It has already been found that the very best "equal variation charts," now in use, are erroneous from 1° to 3°, the error frequently being in the same direction for stretches of several thousand miles; its effect, in navigation, accordingly is cumulative when the mariner, for one reason or another, must rely solely upon the compass and the log. However, the leading hydrographic offices are already revising their charts according to data obtained by the *Carnegie*. Fortunately, owing to the absence of disturbing influences on this vessel and because of the superior instrumental equipment and the skill of the observing staff, the information secured can be made known with a promptness hitherto impossible. The scientific staff with the commander is composed of seven men and the crew of 15, making in all 22 persons aboard.

In addition, however, to merely finding out how the compass bears on the oceans, the dip of the needle and the strength of the magnetic force are measured aboard the *Carnegie*. While the knowledge of the dip and force is chiefly for scientific purposes, nevertheless, there is likewise a practical application; for these quantities must be known in order to apply properly the correcting or adjusting devices required to make a compass on a steel vessel point with approximate correctness, at least.

Observations similar to those on the *Carnegie* are being made by land exploring parties also operating under the direction of the Carnegie Institution of Washington through its "Department of Research in Terrestrial Magnetism." These parties have already, since 1905, visited regions in nearly all parts of the earth. The attempt is being made, with the cooperation of the existing institutions engaged in magnetic work, to complete a magnetic survey of the globe by about 1915 to 1920.

[For further information the American reader may be referred to the annual reports and publications of the above named Department, also to those of the United States Coast and Geodetic Survey, especially "Principal Facts Relating to the Earth's Magnetism," and United States Magnetic Tables and Magnetic Charts for 1905.]

**TERRESTRIAL TEMPERATURES.** See METEOROLOGY.

**TETANUS AND THE FOURTH OF JULY.** Ac-

cording to statistics compiled annually by the *Journal of the American Medical Association*, there was a gratifying decrease in the number of tetanus cases incident to the celebration of the Fourth of July in 1910. There were only 72 cases of tetanus, with 67 deaths, reported throughout the United States, less than half the number for 1909, and fewer than the number for any year since the compilation of these statistics began eight years ago. Attention is called to the significant fact that blank cartridge wounds were correspondingly few; 450 in 1909 as against 225 last year. The wounds from the blank cartridge result in a greater percentage (12.7 per cent.) of deaths than those from loaded firearms (10 per cent.). Sixty-four of the total 72 tetanus cases of 1910 were due to blank cartridge wounds. Tetanus antitoxin was given in 25 cases; in none, however, before active symptoms had set in, and no recoveries are reported from its use. The prophylactic value of antitetanic serum being so thoroughly established, few cases of tetanus having been known to occur after its use as a preventive, it was a matter of regret that this agent was not more generally employed in this way. The mortality was very high this year being 93.1 per cent.

In addition to 67 deaths from lockjaw, 64 persons were killed by fireworks, making a total of 131, or 84 less than 1909. Nineteen persons were killed outright by firearms, 11 by explosions of powder, bombs and torpedoes, 3 by cannon, and 3 by various causes, while 26 (mostly little girls) were burned to death. The total of all injuries from fireworks was 2923, a little more than half the number in 1909. The cause for this better showing was undoubtedly due to the general adoption of restrictive or prohibitive measures in regard to the sale and use of fireworks throughout the country. The figures also show clearly that prohibitive ordinances were far more effective than restrictive measures. Washington, Baltimore, Trenton and Cleveland, enforcing prohibitive ordinances, had only 7 injuries among them. New York, Boston, Chicago, Toledo, and other cities under restrictive measures, while they showed a much lower number of casualties, still had a regrettably large number of deaths and injuries.

**TEXAS.** One of the West South Central Division of the United States. It is the largest State in the Union, having an area of 265,896 square miles, of which 3498 square miles are water surface. Its capital is Austin.

**POPULATION.** The population of the State in 1910 according to the Thirteenth Census was 3,896,542 as compared with 3,048,710 in 1900 and 2,235,527 in 1890. The increase in the decade 1900 to 1910 was 27.8 per cent. The State ranks fifth in point of population whereas in 1900 it ranked sixth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** Texas is one of the most important States in the production of petroleum although there has been a notable decrease in the amount produced in recent years. The production of 1909 was 9,534,467 barrels valued at \$6,793,050 as compared with a production of 11,206,464 barrels valued at \$6,700,708 in 1908. The chief producing fields are the Humble, Saratoga, Sour Lake and Spindle Top fields in coastal Texas and the Corsicana, Powell and Henrietta fields in northern Texas. Texas

ranks fourth in the production of petroleum, being surpassed only by California, Oklahoma and Illinois. The State is an important producer of coal. In 1909 there were mined 1,824,440 short tons as compared with 1,895,377 short tons in 1908. A small amount of copper is produced. Gold and silver are also found in the State. The silver production in 1909 was 365,854 fine ounces as compared with a production of 408,100 fine ounces in 1908. The gold products of the State were valued in 1908 at \$2,068,735. There were produced also large quantities of stone, quicksilver and lime. Other mineral products are coal products, asphalt, sulphur, salt, sand, natural gas, and sand-lime brick.

**AGRICULTURE.** The acreage, production and value of leading crops for 1909 and 1910 are given in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910...	8,800,000	181,280,000	\$114,206,000
1909...	8,150,000	122,250,000	92,910,000
Win. wheat, '10	1,252,000	18,780,000	18,404,000
09	555,000	5,050,000	3,959,000
Oats, 1910...	695,000	24,325,000	11,433,000
1909...	615,000	11,500,000	7,130,000
Barley, 1910...	5,000	150,000	135,000
1909...	4,000	78,000	78,000
Rye, 1910...	4,000	46,000	47,000
1909...	4,000	45,000	55,000
Rice, 1910...	264,800	8,738,000	5,942,000
1909...	291,000	9,894,000	7,717,000
Potatoes, 1910	60,000	3,060,000	3,366,000
1909	60,000	3,000,000	3,180,000
Hay, 1910...	618,000	711,000a	8,532,000
1909...	618,000	587,000	6,985,000
Tobacco, 1910...	700	420,000b	105,000
1909	1,000	650,000	170,300
Cotton, 1910...		3,140,000c	
1909		2,522,811

**EDUCATION.** The number of pupils of school age in the State in 1910-11 was 968,269. The total enrollment, according to figures for 1908-9, the latest available, in the public schools was 833,631 and the average daily attendance was 557,356. There were in the State in 1910, 20,098 teachers in the public schools, of whom 587 held third grade certificates, 10,883 second grade, 5274 first grade, and 2985 permanent. The remaining 269 were special teachers. There are three classes of school districts, common, independent, and cities and towns which have assumed control of their schools. There are in the State 7500 common school districts, 566 independent districts and 114 cities and towns which have assumed control of their schools. A decision of the Supreme Court in 1908 invalidated a great number of independent districts, and resulted in the adoption of some important constitutional amendments. Formerly all school taxes required a two-thirds vote for levy, the constitutional limit in common school districts being 20 cents per \$100 valuation. Under the new amendment common school and independent school districts may vote a maximum of 50 cents on \$100 valuation of property for maintenance, or for maintenance and bond purposes by a majority vote. Cities and towns having charge of their schools must still vote taxes by a two-thirds vote. The statutes limit these cities and towns to 50 cents for maintenance. The legislature of 1911 will be asked to submit an amendment removing the two-thirds limitation imposed by the constitution upon cities and towns having charge of their schools. The legislature will also be asked to enact laws providing for rural high schools and for the increase

of the tenure of office of all educational boards and officers, and to provide for the establishment of county boards of education.

**CHARITIES AND CORRECTIONS.** The only State charitable and correctional institutions are a Reformatory situated at Gatesville, and an Orphan Asylum at Corsicana.

**FINANCE.** The report of the State treasurer for the fiscal year 1910 showed a balance on hand September 1, 1909, of \$1,743,208. The total receipts for the year were \$8,053,491 and the disbursements were \$4,364,607 by disbursements from the State controller and \$4,017,776 by transfers to school fund, leaving a balance on hand September 1, 1910, of \$1,424,641.

**POLITICS AND GOVERNMENT.** There was no regular session of the State legislature in 1910 as the sessions are biennial and the last was held in 1909. There was, however, an extraordinary session called by Governor Campbell in July, to act upon various measures. The most important of these were concerned with prohibition legislation. On August 3, the governor sent a message to the legislature recommending the enactment of a radical anti-saloon law which, if put into effect, would have made the State practically Statewide prohibition. Among the measures was one prohibiting the granting of liquor licenses within ten miles of any State educational institution supported in whole or in part by appropriations from the State's revenue. Another bill prohibited the sale of liquor in less quantity than one quart and provided that it should not be drunk on the premises where it was sold. The House passed these measures by a large majority, but on August 12 they were defeated in the Senate by a vote of 16 to 14.

The legislature passed a bill, remodeling the whole system of penitentiary management, so as to effect reforms. This followed an investigation which disclosed abuse, mismanagement and atrocities in some instances. The special session also passed a bill providing for the complete protection of unsecured creditors in railroad receivership sales. The International & Great Northern railroad, with a large mileage in Texas, in receivership was on the verge of emerging therefrom and repudiating nearly \$3,000,000 in unsecured claims, including bills for supplies, material and labor, and final court judgments. An agitation at once began to repeal or amend that at the regular biennial session which commences on January 10, 1911. Still another law enacted at the special session is that creating the State Insurance Board which has complete jurisdiction over fire insurance rates in Texas. No fire insurance rate can be changed without the consent of the board and it is authorized to raise or lower rates as it sees fit following public hearings. Its powers are as absolute as those of the Texas Railroad Commission. The special session passed other laws.

**CONVENTIONS AND ELECTIONS.** Texas is so strongly a Democratic State that the nomination of candidates by that party is equivalent to an election. The party in 1910 was sharply divided on the issues of prohibition and in the State primaries held in July Col. Oscar B. Colquitt an anti-Prohibitionist was nominated for governor by a plurality of votes.

The Democratic State Convention met on August 9 and proclaimed the nomination of Mr. Colquitt for governor. The convention endorsed Senator J. W. Bailey for President in 1912.

Amendments favoring prohibition, and the prohibition of public officials from accepting fees from corporations while in the service of the State, were tabled. Another amendment endorsing Senator Culberson for having voted in favor of free lumber and free iron ore during the passage of the Payne-Aldrich tariff bill, was also tabled.

The Republican State Convention met at Dallas on August 10, and nominated J. O. Terrell for governor. The platform indorsed the administration of President Taft, opposed the submission of a prohibition constitutional amendment to the voters, indorsed local option and reaffirmed the Republican national platform of 1908.

In the election held November 8, the Democrats elected their candidate, Mr. Colquitt, governor by a plurality of 147,866. The total vote was 173,993 for Colquitt and 26,107 for Terrell.

As the result of the primary election in July, two-thirds of the members of the legislature were instructed to vote for the submission of a Statewide prohibition amendment to the people. This amendment will be voted on July 22, 1911. The legislature is Democratic with the exception of two Republicans. All Democratic Senators and Representatives were instructed in the primaries to vote for the re-election of Charles A. Culberson to the United States Senate.

**OTHER EVENTS.** On May 24 the State Court of Criminal Appeals sustained the validity of the law prohibiting betting on horse-racing and operating pool rooms. It was held to be unlawful to bet on horse races in the State or to place bets within the State on races run in another State or even in a foreign country. In the case at issue the race was run at Juarez, Mexico, and the bet was made between a citizen of Texas and a citizen of Tulsa, Oklahoma, and was made by telegraph. The case was a test case and upholds the constitutionality of the law.

On July 30, a riot broke out at Slocum, 15 miles from the town of Palestine and at least 20 negroes were killed by a mob of white men. The cause of the outbreak was not clear and seemed to have been merely a manifestation of hatred for negroes on the part of the white inhabitants. It was at first reported that negroes had planned to kill the whites and burn their homes and that they were heavily armed. It was later shown that these reports had no foundation. The only cause assigned was that a negro was insolent to a white man who had indorsed his note and was obliged to pay it. State rangers promptly quelled the outbreak. The white men arrested were taken by local peace officers and State rangers. They will be tried in Anderson county, at Palestine, the home of the retiring governor, T. M. Campbell, who detailed a special assistant attorney-general to prosecute the white men.

For an account of the troubles with Mexico resulting from the lynching of an alleged Mexican citizen by inhabitants of Texas, see section *Foreign Relations* under the article UNITED STATES.

**STATE OFFICERS.** Governor, O. B. Colquitt; Lieutenant-Governor, A. B. Davidson; Secretary of State, \_\_\_\_\_; Treasurer, Sam Sparks; Comptroller, W. P. Lane; Superintendent of Public Instruction, F. M. Bralley; Land Commissioner, J. T. Robison, Attorney General, J. P. Lightfoot; Commissioner of Agriculture, E.

R. Kone; Commissioner of Insurance, F. C. von Rosenberg; Commissioner of Public Lands, J. T. Robinson—all Democrats.

**SUPREME COURT.** Chief Justice, Reuben R. Gaines; Associate Justices, Thomas J. Brown and F. A. Williams. Clerk, F. T. Connerly—all Democrats.

**STATE LEGISLATURE, 1911.** Democrats, Senate, 30; House, 109; joint ballot, 139. Republicans, Senate, 1; House, 0; joint ballot, 1.

**TEXAS, UNIVERSITY OF.** An institution of higher learning at Austin, Texas, founded in 1883. The number of students in all departments for the year 1910-11 was 3043, while the faculty numbered 132. Among the changes in the faculty during the year were the loss by resignation of Dr. Alvin S. Johnson, professor of economics; Dr. A. E. Austin, professor of chemistry in the medical department; Dr. F. E. Farrington, professor of the art of teaching; and by death, Dr. George P. Garrison, professor of history. Dr. Lewis H. Haney was appointed to succeed Dr. Johnson; Dr. George F. Gracey to succeed Dr. Austin, and Dr. Bird T. Baldwin to succeed Dr. Farrington. During the year 500 acres of land, worth \$25,000, were donated to the University for instruction purposes by George W. Brackenridge. A bureau of Economic Geology, with laboratory for testing the commercial value of lignites, coals, oils, clays, etc., was organized during the year. The University has a department of extension which carries on instruction by correspondence. The students in this course in 1910 numbered 334. The requirement of five years' courses for admission to the Medical Department went into effect in the fall of 1910. The president is S. E. Mezes.

**TEXTILE MANUFACTURING.** The annual report of mill construction for 1910 compiled by the *Textile World Record* stated that two hundred and seventy-four new textile mills were built or under construction in the United States during the year. In view of the adverse influences that have affected the two principal branches of the trade, cotton and wool manufacturing, this was considered a very favorable showing. As will be seen from the accompanying table the total number of new mills was very little less than in 1909, and was larger than in 1908 or 1907:

COMPARISON OF NEW MILL CONSTRUCTION  
FOR 1905-1910

	Cotton	Woolen	Knitting	Silk	Misc's	Total
1910.....	67	31	113	34	29	274
1909.....	80	47	105	37	20	289
1908.....	47	23	94	33	25	222
1907.....	64	25	83	51	39	262
1906.....	74	56	103	36	34	303
1905.....	33	38	79	53	42	245

The high price of raw cotton naturally had its effect while wool manufacturers have been troubled by uncertainties due to a political agitation that, affecting all branches of the dry goods trade, has had a particularly severe effect on the trade in wool goods.

The table shows that the knitting branch of the business exhibited an increase over 1909, the cotton and silk branches fell slightly behind the 1909 record, while the largest decrease was in woolen and worsted mills, which numbered 29 in 1910, as compared with 47 in 1909.

The development in cotton manufacturing is

clearly shown by the distribution of new spindles and the new mill construction.

The number of new knitting mills in 1910 showed an increase due to the constantly increasing uses for which knit fabrics are being developed. There were 113 new knitting mills in 1910 as compared with 104 in 1909. Most of these new mills were located in the Middle States, 55 being in Pennsylvania, 13 in New York and 4 in New Jersey. Pennsylvania also ranked first in knitting mill construction in 1909.

1905 .....	100,800	97,920	.....	198,720

the new spindles installed in the United States in 1910 are to be found in New England. In the cotton industry the manufacturers of coarse goods were most affected by the high price of cotton, because the raw material contributes so large a part of the cost of such goods. In the cost of fine goods, on the other hand, labor is a much more important item than in low goods. As a result we find the development of cotton manufacturing retarded chiefly in the South, where the product is mainly the low and medium goods. In South Carolina, especially, conditions in the textile industry during 1910 were not good and many mills announced that they would not declare their semi-annual dividends on January 1, 1911. In New England a much larger proportion of the product of the cotton mills consists of fine goods.

The total of new woolen and worsted mills in 1910 was less than in 1909. Reports were had of the construction of 31 new mills. Of these

29 mills were classified as follows: 16 worsted, 7 carpets and rugs, 2 knitting yarn, 2 felt, 1 blanket, 1 satinete.

This construction may be compared with that for previous years as follows: 1909, 47; 1908, 22; 1907, 25; 1906, 56; 1905, 38.

The number of new silk mills for 1910 was slightly behind the 1909 total and was about equal to the average for the preceding two years. New Jersey and Pennsylvania maintained their pre-eminence in this industry with 29 of the 34 mills built in 1910. There was no indication that the development of the silk business is likely to deprive these two States of their leading position in this branch of manufacturing.

**THEODORE THOMAS ORCHESTRA.** See MUSIC.

**THEOLOGICAL EDUCATION.** See UNIVERSITIES AND COLLEGES.

**THIOL** is a water soluble mixture of sulphurated and sulphonated petroleum oils prepared by heating certain paraffin oils with 10 per cent. of sulphur, by which process a partial addition to sulphur takes place. The thiol oil thus formed is then treated with sulphuric acid for sulphonization. Thiol is a brown powder with a pleasant odor resembling Russia leather,

having a somewhat bitter and slightly astrigent taste; it is soluble in water, alcohol, and slightly soluble in ether. The drug is said to have a drying, astrigent, antiphlogistic, and disinfecting action. Taken internally, it is said to help digestion and to be useful in skin diseases, especially in dermatitis, acne, erysipelas, erythema, furunculosis, herpes, pruritis, pityriasis, etc.

**THOMAS, CYRUS.** An American anthropologist, died June 26, 1910. He was born at Kingsport, Tenn., in 1825, and received a public school and academic education. He studied law and was admitted to the bar in 1851, practicing until 1865. In that year he became a minister of the Evangelical Lutheran church. In 1869-73 he was an assistant in the United States Geological Survey. From 1873 to 1875 he was a professor of natural science in the Southern Illinois Normal University and from 1874-76 was State Entomologist of Illinois. He was a member of the United States Entomological Commission in 1876-7 and from 1882 to the time of his death was archaeologist of the United States Bureau of Ethnology. Among his published works are *Noxious and Beneficial Insects of Illinois*, 5 vols.; *Notes on Certain Maya and Mexican Manuscripts*, *Burial Mounds of the Northern Section of the United States*, *Cherokees and Shawnees in Pre-Columbian Times*, *Mound Explorations of the Bureau of American Ethnology*, *Prehistoric Work East of the Rocky Mountains*, *Introduction to American Archaeology*, *Indians of North America in Historic Times*, *Prehistoric North America*, and *Languages of Mexico and Central America*.

**THOMAS, JOSEPH.** An American inventor, died July 1, 1910. He was born in a suburb of Paris, France, in 1827, and came to the United States at the age of 19. He became a machinist's apprentice and early began to show an inventive genius. He was employed by Isaac Merritt Singer at the time the latter was perfecting his sewing machine in New York City, and he had a large part in inventing the feeder and oscillating device which made the sewing machine a success. Perhaps his most important invention was the first machine for the manufacture of sulphur matches. This machine was able to turn out 20,000 matches a minute. In the 50's Mr. Thomas invented the steel wire hoop skirt which soon became worn throughout the United States and elsewhere. He sold his invention to a Philadelphia manufacturer, who made the skirts on an extensive scale and built up a large fortune. He invented also a grip to hold cars operated with a cable. He lived in Hoboken, N. J., over fifty years, and in 1862 was a member of the Hoboken Common Council.

**TIBET.** A Chinese dependency in central Asia. Approximate area, 463,200 sq. miles; estimated population, three to six millions. Capital, Lhasa (15,000 to 20,000 inhabitants). Tibet is the home of Lamaism, a corrupt form of Buddhism. Wool, borax, salt, animals, and musk are exported to India, in return for cotton and woolen goods, coral and grain. The total trade in 1909-10 was about £201,000—a

serious decline from 1908-9, due to political disturbance. The head of the government, the Dalai Lama (Tubstan, born 1876, ruled from birth), who had fled before the British advance on Lhasa (1904), returned in January, 1910. In February he again fled into India, pursued by Chinese troops, and was deposed by the Chinese emperor. See CHINESE EMPIRE, History. There are two Chinese residents (ambans): 1910, Tchao Ehr-feng and Wen Tsong yo). Permanent Chinese troops are stationed in the country.

Rumors of an interference on the part of the Tibetans and Chinese with the British trade agencies in Tibet were circulated in the latter part of July. As a precautionary measure Indian troops were mobilized for the protection of the agencies. It was feared the Tibetans would attack the latter on account of England's refusal to aid in restoring the Dalai Lama.

**TIMBER.** See FORESTRY.

**TIME COMPUTATIONS FROM MORAINES.** See GEOLOGY.

**TIMOR.** An island of the Malay Archipelago, the largest of the Lesser Sunda group, divided between the Netherlands and Portugal. Approximate area, 12,593 square miles; estimated population, 400,000. About 7330 square miles (200,000 inhabitants) belong to Portugal; capital and chief port, Dilli. The natives are pagans. Imports into Portuguese Timor (1908), 310,625 milreis; exports, 358,413 (coffee, 230,722; sandal wood, 46,895; wax, 23,776; sandal root, 18,514). Estimated revenue (1909-10), 139,858 milreis; expenditure, 220,600. Governor (1910) of Portuguese Timor, F. da Camada; of Dutch Timor, E. F. J. Loriaux.

**TIN.** The tin supply of the world in 1909 amounted to 117,149 short tons. Of this amount by far the greater part came from the Straits Settlements. The production of tin in the various countries from which it is obtained is shown for the years 1908-9 in the following table:

SUPPLY OF TIN IN 1908 AND 1909 IN SHORT TONS

	1908	1909
Total shipments:		
Straits Settlements .....	67,760	65,459
Austria .....	6,552	5,992

South Africa .....	1,904	916
China .....		
Bank sales in Holland .....	12,880	12,992
Billiton sales in Java .....	2,465	2,465
Production in Cornwall .....	6,048	5,802
Total .....	116,649	117,149

Tin is one of the few commercial metals of which the United States is not an important producer although it is the largest consumer of the metal, taking about 43 per cent. of the world's production. Small amounts are mined in South Dakota. Prospecting is also carried on in Texas and several other States although there are no producing mines.

In 1909 the United States imported for consumption 47,662 short tons of metallic tin, valued at \$27,558,546; 1432 tons of cassiterite, valued at \$68,462; tin foil, valued at \$23,427 and other manufactures of tin valued at \$55,714. In 1910 there was no production of tin in the United States, although a serious attempt was made to develop the industry both in Texas and South Dakota. The monthly prices of tin in New York during the years 1909-10 are shown

in the following table taken from the *Engineering and Mining Journal*.

## TIN AT NEW YORK

Month	1909	1910	Month	1909	1910
January....	28.060	32.700	July ....	29.125	32.695

March.....	28.727	32.403	Sept.....	30.293	34.982
April.....	29.445	32.976	October...	30.475	36.190
May.....	29.225	33.125	Nov.....	30.859	36.547
June.....	29.322	32.769	Dec.....	32.913	38.199
Av. Year..			29.725	34.123	

Prices are in cents per pound.

The imports of tin in all forms into the United States for the fiscal year 1910 amounted to 101,134,508 pounds, valued at \$30,869,532. Of this, the largest quantity was imported from the United Kingdom, 56,610,111 pounds; from the Straits Settlements, 37,674,628 pounds. The remaining quantity was imported from the Netherlands and other countries of Europe and countries of Asia and Oceania. See **ATOMIC WEIGHTS**.

**TIN, DECAY OF.** See **CHEMISTRY**.

**TIRRELL, CHARLES QUINCY.** An American public official, member of Congress from the 4th Massachusetts District, died July 31, 1910. He was born in Sharon, Mass., in 1844 and graduated from Dartmouth College in 1866. He was engaged in teaching from 1867 to 1869 and after studying law he was admitted to the bar. He practiced in Boston and was elected a member of the Massachusetts House of Representatives in 1872 and of the State Senate in 1881-2. He was a presidential elector in 1888. He was elected to the House of Representatives in 1901 and was successively re-elected until 1911.

**TITANIUM.** See **ATOMIC WEIGHTS**.

**TOBACCO. THE UNITED STATES CROP.** The tobacco crop of 1910 in the United States was 984,349,000 pounds, grown on 1,233,800 acres. This was an increase of about thirty-five million pounds over 1909, and 26 per cent. above the average production of the five preceding years. Of the total amount, 167,000,000 pounds was of the cigar type, the balance being of chewing, smoking, snuff, and export types. The farm value of the crop is estimated at \$91,459,000. The value of the exports of tobacco amounted to \$38,115,386, and of the imports to \$27,756,133. The pool in the White Burley district, in the long fight against the American Tobacco Company, was broken near the close of the year by the high prices offered by the trust. A considerable part of the pooled crop of 1909 remains on hand, and the unpooled portion of the 1910 crop is practically untouched, which has led to agitation in favor of growing no crop in 1911. Shade-grown cigar tobacco, which for a time was very profitable in Georgia and Florida, has ceased to be profitable to the grower at present prices. The internal revenue tax on manufactured tobacco during the fiscal year 1910 was \$57,889,351.59, an increase of over \$8,000,000 above 1909. This tax was collected on 8,139,030,144 cigars, 7,874,300,329 cigarettes, 436,608,898 pounds of smoking tobacco, and 31,969,111 pounds of snuff.

The Cuban crop of 1909 is given as 404,358 bales of 120 pounds each, against 563,059 bales in 1908. The crop in Russia for 1909 was 88,200 tons, grown on 147,546 acres. In 1908 Japan produced 90,740,000 pounds on an area of 73,218 acres. The new tariff law has greatly

stimulated interest in the tobacco industry in the Philippines. In the eleven months ending June 3, 1910, about 88,000,000 cigars, valued at \$1,906,447, were shipped from the islands to the United States, or something more than half the number allowed free admission. The total exports of cigars increased from 115,977,000 in 1909 to 196,192,000 in 1910. The price of leaf tobacco in the islands has advanced 80 per cent. A recent census of the tobacco industry in Great Britain shows the total quantity of tobacco manufactured to be 966,000 cwt., valued at \$115,817,833, and an average of 37,456 persons employed in the trade.

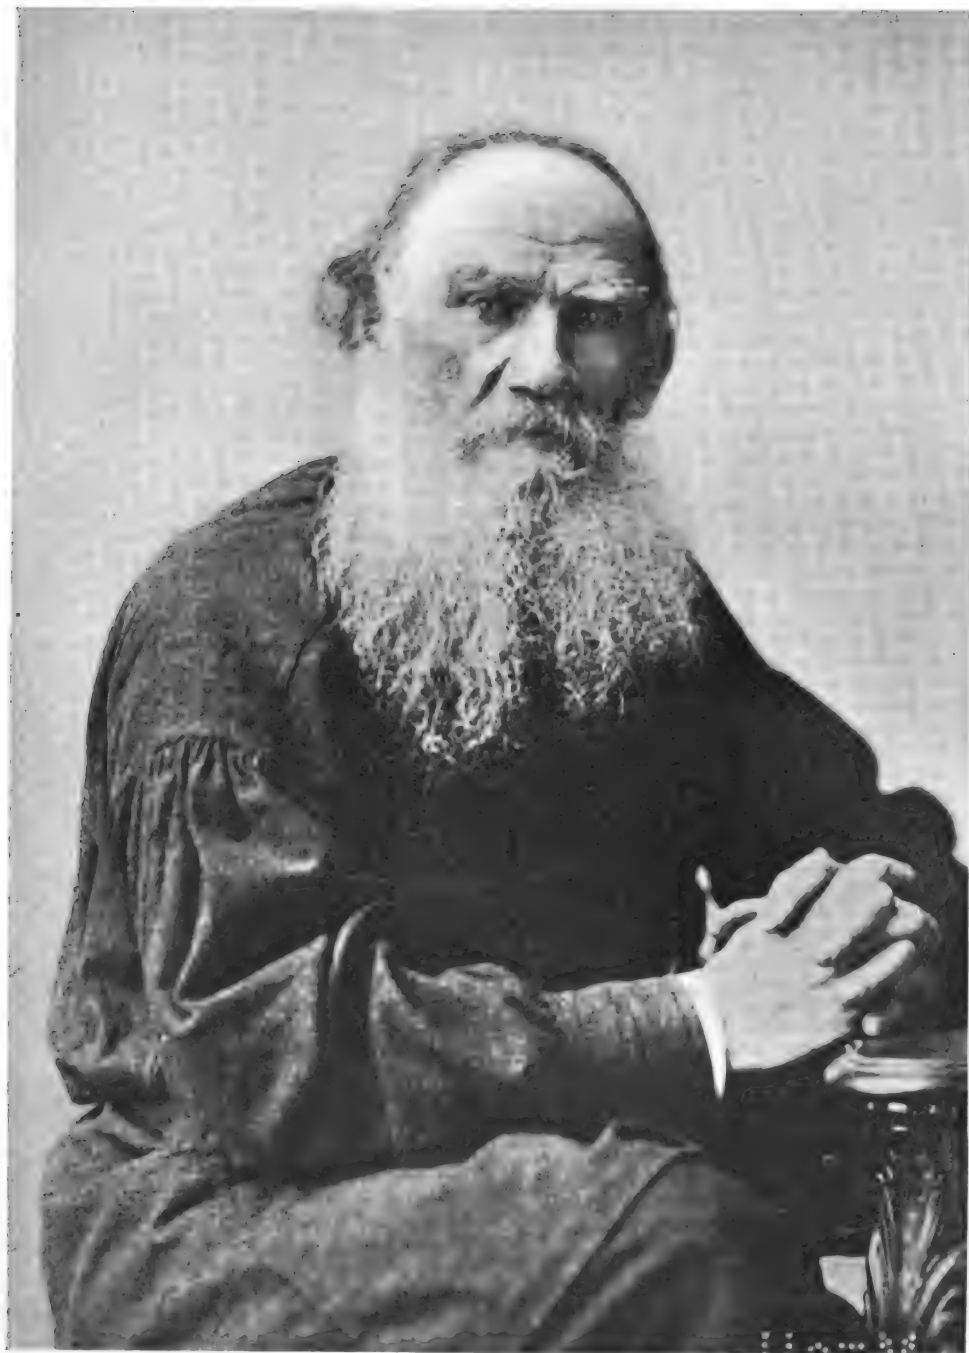

**TOBLER, ADOLF.** A Swiss philologist, died in March, 1910. He was born at Hirzel, in the canton of Zurich, in 1835 and was educated at the schools of his native town and at the University of Bonn. In 1867 he became professor at the University of Berlin. He wrote many monographs on philological subjects, and his researches have contributed greatly to the knowledge of Old French syntax. His publications include: *Gedichte von Jehan de Coucet* (1860); *Vom französischen Versbau alter und neuer Zeit* (3d ed. 1894; French translation 1885); *Vermischte Beiträge zur französischen Grammatik* (three series, 2d ed., 1899-1906); an edition of *Li proverbe au vilain* (1895).

**TODD, Sir CHARLES.** An Australian astronomer, died February, 1910. He was born at Islington, England, in 1826. In 1841 he became computer at the Royal Observatory, Greenwich. After spending some time at Cambridge Observatory he returned to Greenwich and in 1855 was appointed government astronomer for South Australia and in this post he remained until his death. He was knighted by Queen Victoria for his work in connection with the telegraph in Australia.

**TOGOLAND.** A German protectorate on the west coast of Africa. Area, 33,700 square miles; population, about 1,000,000. Capital and chief port, Lome. Imports (1908), 8,509,380 marks (cotton, 1,850,958; cotton yarn, 233,913; spirits, 513,615; iron and iron wares, 446,635). Exports, 6,893,324 marks (palm kernels, 957,231; palm oil, 497,474; rubber, 587,022; cotton, 366,040; corn 2,030,746). Vessels entered, 260, of 471,140 tons (312,495 tons German). Estimated revenue (1909-10), 6,453,073 marks; expenditure, 6,982,016. There are 102 miles of railway in operation, and 108 under construction. Governor (1910), Count von Zeeh-Neuhofen. Little Popo and Porto Seguro are administratively attached to Togoland.

**TOLMAN, A. H.** See **LITERATURE, ENGLISH AND AMERICAN, Essays and Literary Criticism**.

**TOLSTOY, LYOFF (LEO) NIKOLAYEVITCH.** Count. A Russian novelist, philosopher and philanthropist, died November 20, 1910. He was born August 28, 1828, at Yasnaya Poliana, a village about 150 miles south of Moscow. He was a descendant in the 20th generation from a German named Indris, who went to Russia in 1353 with two sons and a retinue of 3000 people, and on being baptized into the Orthodox Church received the name of Leonty. His great grandson received the surname Tolstoy and the countship dates from the coronation of Empress Catherine I, having been bestowed upon Peter Andreyevitch Tolstoy as part consideration of his services in the trial and execution of the Tsarevitch Alexis. Count Tolstoy's mother died when he was three years old, and his father five years

COUNT LEO TOLSTOY

1790

later. The boy's early life was spent in the village and his early training was conducted under the influence of the general feeling among the wealthy Russians that religion was a superstition and not necessary for the best development of really cultured people. In 1844 he entered the Kazan University as a student in Turco-Arabic literature, but failing to pass the examination was transferred to the Department of Law. He received his diploma in 1858 "knowing literally nothing" as he asserted later. In 1851 he went to visit his brother in the Caucasus and there he was profoundly impressed with the rugged wildness of that country. He entered the Horse Guards as a volunteer and remained in military service eight years. In January, 1854, two months after the Crimean War began, he was made a commissioned officer and he served in the campaign with distinction as the commander of a mounted battery. Previous to this period he had written many short stories, which attracted the attention of the literary circle in Moscow and St. Petersburg. The military events in which he was engaged furnished him with new experiences which were valuable in his later work. At the close of the war he returned to St. Petersburg where, as a nobleman, a successful officer in the war and a littérateur he was much lionized. He remained at the capital for several years, and to this period belong the works of the strictly literary type upon which his fame as a great literary artist rests. The most noted of these are *Childhood*, *Boyhood and Youth*, *The Cossacks*, *Sebastopol Sketches*, *War and Peace*, and *Anna Karenina*. He soon wearied of his surroundings in St. Petersburg and of his own manner of living and that of those about him. He afterwards referred to himself as having been during that period a murderer, adulterer, robber and thief, although there was no evidence that his conduct was the sort usually characterized by these terms. Returning to Yasnaya Poliana he made his home there for the greater part of each year during the rest of his life. In 1862 he married the daughter of a professor in the University of Moscow. In the society of his wife he found the greatest comfort and happiness. Though there were nine children born to them the cares of motherhood did not prevent the Countess from serving as her husband's amanuensis all through his years of authorship. Tolstoy's first act after he had retired to his country estate was to free his serfs. This was in advance of the famous decree of emancipation of Alexander II. He is said to have been the first nobleman in Russia to take this course. He then busied himself with plans for the education and betterment of the peasantry. After much introspection and study he became imbued with the idea of what seemed to him the purposelessness of living and contemplated suicide, but after consideration he gave up this idea and delved instead into all sorts of philosophic investigation. From observation of the manner of living among his peasants he at length reached the conclusion that a literal following of the gospels resulted in a truly useful and happy life. This period dates from 1880, and in the twenty years following his principal literary works were *My Confessions*, *Criticism of Dogmatic Theology*, which was never translated into English, *The Four Gospels Harmonized and Translated*, *What I Believe*, sometimes called *My Religion*, *The Gospel in Brief*, *What Must we do Then?* *On Life*, also

called *Life*, *The Kreutzer Sonata*, dealing with the sex question, *The Kingdom of God is within You*, *The Christian Teaching*, *What is Art?* and *Resurrection*. In these books Tolstoy set forth his ideas of true living. Much that they contained was at variance with the views of the Russian government and the author expected to be prosecuted directly for writing them. In this, however, he was disappointed for the government went no further than to suppress some of the books, mutilate others and to exile some of the author's friends. In 1901 he himself was excommunicated by the Holy Synod. Tolstoy at that time addressed a letter to the Czar himself in which he predicted that if the latter did not manifest a change of heart there would be a recurrence of all the terrors of Nihilism. For many years Tolstoy refused to accept payment for his writings, and this and the fact that he was continually giving away his property and associating with the poorest peasantry threatened the dissipation of his property. He was induced to make over his estates to his wife, but he himself lived in a small house in the simplest possible manner. Tolstoy asserted that he was opposed both to anarchism and socialism. He was in agreement with the single tax theories of Henry George, whom with William Lloyd Garrison he characterized as the greatest Americans. He was strongly opposed to the Russo-Japanese War and placed the blame on his native country. He prophesied that the Duma, whose members he referred to as "babblers," would never accomplish anything. In 1908 the celebration of his eightieth birthday was made the occasion of celebration in some twenty towns in Russia, in spite of the efforts of the government to prevent them and his own expressed desire that no celebration should take place. In 1907 it was proposed to confer the Nobel peace prize upon him, but he declined it and when a similar proposal was made in September, 1909, he again refused it, suggesting that it be bestowed upon the religious sect known as Doukhobors. With Turgenieff, Tolstoy was probably the most distinguished Russian writer of fiction. They were at one time intimate friends, but gradually drew apart. He was once told by Turgenieff that he was wrong in leaving the writing of novels for his philosophical and religious studies. His philosophy was narrowed by lack of breadth of vision and, to some extent, by downright ignorance. He knew little of the great currents of modern life, and as he grew older, became more erratic and intolerant. Certain of his novels were among the greatest ever written. His philosophical and social writings lack breadth and knowledge to make them of the first or second order. Several weeks before his death he left his home with the avowed purpose of spending the remainder of his life in solitude, but as the result of exposure he was taken ill and died while on the journey. His collected works were published at Moscow in 14 volumes, 1899 to 1905. Twelve volumes were translated into English. In addition to those mentioned above he wrote *The Decembrists*, of which only three chapters appeared, *The Death of Ivan Ilyitch* (1885) and the dramas, *The Power of Darkness*, *Fruits of Culture* and *The Corpse*.

**TONGA ISLANDS**, or FRIENDLY ISLANDS. A British protectorate in the South Pacific. Area, 390 square miles; population (police census of November, 1908), 21,695 Tongan natives; other Pacific islanders, 400; Europeans, 639.

Capital, Nukualofa, on the island of Tongatabu. Imports (1909), £152,871; exports, £217,155 (copra, £203,836; fruits, £7930). Entered, 43 vessels, of 64,942 tons. Revenue (1909), £40,457; expenditure, £34,739. Native king, Jioaji Tubou II, born June 18, 1874; married, November 11, 1909, to Ana Seini Jakibo, Princess of Tonga. British agent and consul, W. Telfer Campbell. Report was made at Seattle on April 30 by a vessel arriving from the Tonga Islands that two Presbyterian missionaries, Rev. Horatio Hopkins and Rev. Hector L. McPherson, had been killed and eaten by cannibals on Savage Island. Ancient religious rites which were accompanied by the eating of human flesh were said to have been revived in the Tonga, Solomon, Cook and Society Islands.

**TONGKING.** A French protectorate in French Indo-China (q. v.). Estimated area, 46,223 square miles; population (1906), 5,896,510. The capital, Hanoi (103,238 inhabitants), is also the capital of French Indo-China. Principal port, Haiphong (20,000). Coal, copper, and iron are mined. The chief crops are rice, sugar-cane, coffee, cotton, cardamoms, fruits, and tobacco. About 500,000 kilos of raw silk are produced annually, and there are two cotton mills. Imports (1908), 59,910,100 francs; exports, 60,468,800 francs. Vessels entered (1907), 209, of 151,940 tons; cleared, 249, of 255,486. The local budget balanced (1909) at 6,116,000 piastres. Resident-superior (1910), M. Simoni, acting.

**TRADE UNIONS, INTERNATIONAL.** Recent years have shown a very decided tendency on the part of trade unions throughout the world to form international associations. One of the most important of these is the International Secretariat. The report of its sixth conference at Paris in 1909, issued during the summer, showed that trade unions of nineteen countries were represented. To these was later added the American Federation of Labor representing the majority of American trade unions. The total trade-union membership of these countries, as estimated in the report, was 9,960,000; this was known, however, to be several million short of the true number. A movement was begun, led by German unions, to form an International Federation of Labor with repre-

sentation on the basis of trade-union membership in the respective countries. At the close of 1909 there were twenty-eight international federations of trade unions, of which twenty-five had headquarters in Germany, two in Manchester, England, and one at Antwerp. In the spring appeared the first number of the *Bulletin* of the International Federation of Hatters, published by the secretary at Altenburg, Germany. As the hatmakers' trade is much the same the world over this *Bulletin* is expected to render real service to the membership. On August 26, representatives of the International Seamen's Union met at Copenhagen and adopted a motion for an international strike of three weeks, unless shipowners in each country appointed a committee to confer with union delegates on improving the condition of seamen. The main object sought was to establish some method for the arbitration and conciliation of trade differences. The delegates adopting this resolution represented the organized seamen of all the principal countries in the world. Later in the year it was stated that the strike would be ordered about May 1, 1911. A resolution was also adopted whereby a closer affiliation of all seamen's unions of the world was brought about. This makes it possible for a seaman belonging to the union in one country to be transferred to a union in another country without the payment of an entrance fee.

**AMERICA.** The campaign for an eight-hour day, begun by the International Typographical Union in 1905, practically ended in 1910. The membership, which declined by 4000 from 1905 to 1908, increased by 10,000 to 52,100 in 1910. This campaign, attended by strikes and lockouts at various points throughout the country, was successful. It cost the Union more than \$5,000,000 collected from those members employed. During these years an old-age pension scheme was put into operation. On May 31, 1910, there were 642 persons on the pension roll and they had received \$196,740 during the preceding year. This Union showed receipts of \$1,800,000 and expenditures of \$1,640,000 in 1907, which was a strike year. In 1909 the receipts were \$478,000 and the expenditures \$458,000. The International Moulders' Union of North America started a strictly life insurance scheme on the basis of the fraternal congress tables. The plan for this was first presented in 1907, but was set aside for two years on account of industrial depression; a fund of \$10,000 was provided to institute the scheme.

At its convention at Indianapolis in February the United Mine Workers authorized a committee to meet with the Western Federation of Miners with a view to arranging a basis for coöperation. This step was later followed by others looking toward a consolidation of miners in the metaliferous and coal mining industries into one international union. The increased use of trade agreements and of conciliatory methods in securing the readjustment of wages and conditions was well illustrated by the Order of Railroad Telegraphers. From January to September this union settled fifty-one wage scales, gaining \$1,000,000 in the annual wages of 50,000 men. A few of these disputes were attended by temporary strikes settled quickly by conciliation under the Erdman Act. The *Official Journal* of the Cigar Makers' International Union reported that this organization had on hand at the close of 1909 a cash balance of

\$672,000. During the year it had paid strike benefits of \$20,000; sick benefits of \$186,983; death or total disability benefits of \$238,284; traveling benefits of \$41,589; and out-of-work benefits of \$76,107. The latter, though somewhat smaller than in 1908, was four times as much as in 1907 and larger than in preceding years since 1897. The Union, which has weekly dues of thirty cents, had 51,477 members, or almost twice the membership of 1898.

**UNION SHOP UPHOLD.** In 1902 the New York Stereotypers' Union No. 1 and the New York Electrotypers' Union endeavored to organize the men in the Brooklyn branch of the United States Printing Company. A strike resulted, followed by an agreement whereby only union men were to be employed after January, 1904. A stockholder and two employees of the company secured injunctions restraining the company from carrying out this agreement. After several trials the case was decided in January, 1910, by the Court of Appeals refusing to sustain the injunction. The Court held that those securing the injunction, not being parties to the agreement, could not interfere with its fulfillment. Trade unionists were inclined to interpret this decision as meaning that a strike and agreement for the union shop are legal. See **LABOR, AMERICAN FEDERATION OF.**

**GREAT BRITAIN, PARLIAMENTARY REPRESENTATION.** The most widely discussed problem in trade-union circles of Great Britain was the problem of labor representation in Parliament. On December 21, 1909, the House of Lords had sustained a judicial decision of a year earlier in the case of *Osborne vs. The Amalgamated Society of Railway Servants* in which it was declared that a trade union is not competent to maintain representation in Parliament by means of union funds or levies upon its members. This decision was based on the doctrine that a trade union is so clearly an industrial, rather than a political organization, and that these two purposes are so dissimilar, that it is illegal to use union funds for political purposes. The decision, therefore, was a serious blow to many of the newer activities of English unions. Not only have they for forty years maintained representatives in Parliament, but local unions have taken part in municipal elections in the election of poor-law guardians. At the Trade-Union Congress political questions have been regularly discussed for decades and the tendency of the British trade-union movement has been to become more socialistic in temper with a more pronounced conviction that the advancement of trade-union welfare depends largely upon political action. Following the above decision many trade unions took steps to maintain their parliamentary representatives by voluntary contributions. At the spring session of Parliament a bill was introduced by the labor members authorizing trade unions to support their representatives out of union funds. This was advanced only to the first reading. A counter-proposal was made by representatives of the government that a law be passed providing for the payment of all members of Parliament and the expenses of elections out of the Imperial Treasury. This proposal was vigorously denounced by trade-union leaders on the ground that it would tend to undermine their corporate activity.

The **TRADE-UNION CONGRESS**, at its annual meeting at Sheffield in September, devoted a

great deal of time to the discussion of the Osborne case. It resolved, by a vote of 1,171,000 for to 13,000 against, to support by every possible means the Labor party bill for a reversal of this judgment. It also adopted a resolution favoring the concentration of the English trade-union movement under one head, instead of under three as at present. There are independent unions having no bond except that of sending delegates to the Trade-Union Congress and of exerting some influence in the appointment of members of the Parliamentary Representation Committee. Then many of these unions, with an aggregate membership of 700,000, are affiliated with the General Federation of Trade Unions, which has its own annual conference. In the third place there is the Labor party to which most of the unions belong; therefore, many unions are represented in three annual conferences. The preliminary draft of plans for amalgamation was placed in the hands of a committee. An important matter of trade-union relationship grew out of a resolution adopted by the Congress in 1906, excluding any organization which divides public employees from fellow-workmen employed by private concerns in the same occupations. On this ground the Municipal Employees Trade Union was denied admission. The union thereupon admitted other laborers than municipal employees; but it was again denied admission because this new condition made it impossible for it to gain admission to any national trade union without which it could not be admitted to the Congress. The new system of labor exchanges (q. v.) was strongly condemned. Previously, the unions had maintained exchanges themselves and employers were accustomed to seek labor through them. This gave unions greater control over the labor supply in their respective fields, but the new exchanges, ignoring the distinction between union and non-union, have weakened this control.

**UNION OF TRANSPORTING TRADES.** On September 22-23 a convention of fifteen unions, including every branch of the transportation trade, met to discuss the question of uniting into one organization. The conference included representatives of railway servants; sailors; ship firemen; stewards; cooks; butchers and bakers; dock, wharf, and riverside workers; stevedores; engine men; truck drivers. About 200,000 workers were represented. While actual amalgamation was not achieved a federation was formed to reduce competition and secure a better adjustment of trade disputes.

At the annual convention of the Amalgamated Society of Railway Servants, at which sixty delegates represented 60,000 members, and the convention of the Miners' Federation, at which 167 delegates represented 600,000 miners; the strongest opposition was shown to the Osborne decision. The latter organization rejoined in a practically general eight-hour day in the mines of Great Britain. It demanded modification of the Workmen's Compensation Act by provision of minimum compensation of \$3.75 per week for all coal-getters and \$3 for all other adult workers in mines.

In 1909 the Parliamentary Committee sent a delegation to Germany to study the workingmen's insurance systems. They reported favorably. Thereupon plans were drawn up for insurance against sickness and unemployment based on compulsory contributions from both

employers and employes, with state subsidy; the insurance to be differentiated by trades. The legislative programme of the committee included the repeal of the Osborne decision; provision for unemployed workmen; the Education Administration Provisions bill, dealing with the feeding of school children; a forty-eight hour week for all workmen; the nationalization of railways; and a bill dealing with the eviction of workmen during trade disputes.

**SOCIALISTIC TENDENCIES.** Unlike the situation in the United States and some Continental countries, the English unions combine political and trade activities. This tendency is accentuated by the growth of Socialism among trade unionists. This is viewed with alarm by many, even by some trade union sympathizers. The trade union has heretofore for the most part been concerned chiefly with the advancement of the interests of its own members, even by conflict with other unions. But Socialism spreads the feeling of working-class consciousness; it aims to advance the interests of all laborers; it is likely therefore to lead to greater efforts to organize all such and induce them to strike together in a general strike for the interests of any one group.

**NUMBERS.** The Board of Trade *Labor Gazette* for August gave the number of trade unions at the beginning of 1910 as 1153 with a total membership of 2,347,461. Although this was somewhat below the total for the two years preceding it was ten per cent. larger than for any other year. In the building trades there was a continuous decline for nine years, aggregating thirty-five per cent. There was, however, an increase in the textile and mining groups. The membership included 207,518 women. The *Gazette* for April gave the membership of mining and quarrying unions as 718,000; engineering and ship-building, 365,200; railway service, 118,700. The total income of 100 principal unions in 1908 was \$13,668,000, and expenditures \$16,600,000; the aggregate reserve fund, \$25,850,000; the aggregate expenditures of these unions in ten years equaled \$97,000,000; of this eleven per cent. went for strike benefits and forty-three per cent. for unemployed benefits.

**TRADE AGREEMENTS.** The English unions, more than any others, have perfected the use of trade agreements and arbitration and conciliation boards. In October, 1910, there were in force 1696 trade agreements, affecting 2,400,000 workers. These agreements depend on the organization of employers and employes; they fix hours, wages, and other conditions of work; and they frequently provide means for the conciliation or arbitration of differences, with penalties for strikes or lockouts in violation of these terms. By trades they were distributed as follows: Building, 803 affecting 200,000 workers; clothing, 303 affecting 50,000; metal, engineering and shipbuilding, 163 affecting 163,000; mining and quarrying, 56 affecting 900,000; printing, 79 affecting 40,000; textiles, 113 affecting 460,000; and transportation, 92 affecting 500,000.

**FRANCE.** The chief centre of trade union activity in France in the last few years has been the *Confédération Générale du Travail*. This was organized in 1895 and now has a membership variously estimated at 300,000 to 400,000. Although the total number of trade-union members in the country now exceed

1,000,000, this General Federation of Labor is the centre of radical and aggressive action. It is composed of representatives from two classes of labor groups, namely, the labor exchanges (*Bourses du Travail*) and the federations of labor and industry (*Fédérations de Syndicats*). The former now number 150. They receive annual subsidies from the various cities in which they are situated amounting to a total of 500,000 francs; thus the Paris Exchange receives 110,000 francs per year, that at St. Etienne 31,000, that at Bordeaux 12,000. These exchanges form centres of education in trade union policy. They maintain libraries and lecturers; and they carry on active union organization. The *Syndicats* have as their chief function the promotion of strikes. The interesting feature of the organization of the General Federation is that each subgroup, whether a federation of labor exchanges or a federation of syndicates, has a representative on the General Committee. Thus the federation of railway unions with 24,000 members, the union workers with 14,000, the mechanics with 5000, and the laundry-workers with 200, each have one delegate. The result is that the larger and more conservative bodies, though possessing a considerable majority of actual members, have less voting power than the smaller and more radical groups. The General Committee of the Federation has three permanent committees: (1) the committee in charge of the daily news organ, *Voix du Peuple*; (2) the committee on strikes and the general strike; (3) the committee of organization. It is the committee on strikes and the general strike which directs the chief activities of the Federation. At its various congresses the Federation has pronounced in favor of the boycott, sabotage, and the general strike. It declares its purpose "to instil into the mind of the workingman the necessity for a general strike." "Repeated strikes are for the proletariat a powerful medium of education, as well as excellent practice for action." The sabotage system, although adopted as early as 1897, has come into active use only in the last two years. It is based on the principle of "bad work for bad pay." It includes the policy of spoiling goods on purpose, wasting the material, stirring up prejudice against the employer, malicious injury and destruction of machines and instruments, and other methods of spoiling a job. Along with these policies goes the condemnation of arbitration, workingmen's councils, and any means of regulating strikes. The Federation also condemns patriotism and the use of military force in industrial disputes. It has for several years carried on an active propaganda among the soldiers. These facts indicate that a radical anarchistic group of leaders has obtained control of the chief body of French unions. But it is nevertheless true that a considerable proportion of the membership favor the gradual reform of existing industrial conditions rather than revolution.

The most important strike initiated by the Federation during the year was the general railway strike (see **STRIKES AND LOCKOUTS**). This cost the country about \$55,000,000, the loss to the employes being \$2,500,000 in wages. This strike was responsible for the government policy, initiated by M. Briand, of instituting an effective means of preventing strikes on railways and other public utilities.

**GERMANY.** One of the most notable developments of trade-union policy in Germany in recent years is the increase in the use of collective bargaining and conciliation. These methods have come more and more into use as the unions have become stronger financially and numerically and therefore better able to enforce their demands by strikes. In 1908 there were about 78,000 persons benefited by strikes and lockouts, while 397,000 were benefited by 1973 collective trade agreements. At the close of 1908 there were in force 5671 trade agreements affecting 120,401 establishments and 1,026,000 employees. Of these 2096 agreements and 423,072 employees were in the building trades; 557 agreements and 112,800 employees were in wood working; and almost equally large numbers applied to metal working, the clothing trades, and food preparation, and allied trades.

At the close of 1907 the total membership of German trade unions was 2,405,368. This was only slightly below the maximum of 1907. The membership of the larger organizations was as follows: Metal workers, 385,270; masons, 171,337; wood workers, 148,942; factory operatives 135,946; miners (Social Democrat) 113,328; textile workers, 181,488; transport workers, 92,039; miners, (Christian) 78,619; printers, 57,836; railway mechanics, 56,767; building laborers, 56,653; carpenters, 53,077; painters, 39,201; tailors, 38,208; machinists and metal workers (Hirsch-Duncker) 37,647; shoemakers, 36,138; building mechanics and laborers, (Christian) 34,418; brewery workers, 33,695. The total membership of the Social Democratic unions was 1,832,667; about three-fourths of the remaining membership was credited to the Christian unions promoted by the Catholic Church and one-fourth to the Hirsch-Duncker unions. The total expenditures of all trade unions was \$12,800,000, of which 85 per cent. was spent by the Social Democratic unions. These latter spent \$1,750,000 for strike benefits, \$2,250,000 for unemployment and traveling benefits, and \$2,200,000 for sickness and death benefits.

**AUSTRIA.** The total membership of Austrian unions at the close of 1909 was 415,000, a decline of 85,000 in two years. These represented seven different nationalities: Germans, Bohemians, Italians, Slovaks, Croats, Ruthenians, and Rumanians. Of these the Germans comprised seventy-five per cent. and the Bohemians twenty per cent. The unions have adopted the policy of keeping trade union activity separate from political agitation, although the leaders in both movements may be the same. The total benefits paid by all Austrian unions in 1907 were \$573,000. Of this \$230,000 were for unemployment benefits, an equal amount for sick, funeral and infirmity benefits, and small amounts for travelling and distress. The total receipts were \$1,600,000 and total expenses \$1,400,000.

**SWEDEN.** The general strike of 1909, although it failed, had the effect of increasing the feeling of solidarity among trade unionists. This led to the question of the advisability of combined trade-union action for political purposes. At the convention of the national labor organizations it was voted to keep the trade-union movement separate from the political movement. While endorsing "the social democratic party as the natural expression of the national ambition of the Swedish workers," it

seemed advisable to separate the economic and political agitations in order not to cause disruption in the trade-union ranks. This was similar to action taken in Hungary and Italy. It means that the Socialists will not dominate the trade-union movement. The total membership of Swedish trade unions, January 1, 1909, was 169,776.

**BELGIUM.** The International Miners' Congress opened at Brussels August 12. Resolutions were adopted favoring the nationalization of mines and demanding laws authorizing workmen to be mine inspectors so that mines can be inspected at any time, establishing wage boards to fix minimum wages proportional to the cost of living, and forbidding the employment of women and girls in mines under any conditions.

**TRANS-AND-AN RAILWAY.** See EXPLORATION, paragraphs on America.

**TRANSMISSION OF ELECTRICAL POWER.** The complete success of power transmission at 110,000 volts was fully established by the operating experiences of 1910, and pressures of this value or higher will doubtless be considered standard rather than experimental henceforth. The great 300-mile transmission system of the Hydro-electric Commission of Ontario went into successful operation at this pressure early in the year. The generating station of this system has been planned for an ultimate development of 220,000 horse-power. The transmission system is noteworthy for its extensive use of aluminum conductors. It is expected that this great development will have a marked influence on the industrial development of the province.

**EXPERIMENTS WITH HIGHER PRESSURES.** Sustained operation at voltages above 110,000 was not attempted commercially, though the Southern Power Company successfully experimented with 125,000 volts on its 100,000-volt system. Work was begun on a line to be operated at 135,000 volts between Cook Falls, Michigan, and the cities of Flint and Battle Creek, a distance of 190 miles. The line is to be a single three-phase circuit of No. 0 copper wires hung from 8 disc, suspension type insulators. Some conception of the important mechanical problems introduced by the suspension type of insulation and these great pressures is gained from the fact that the wires are to enclose an isosceles triangle with sides of 17 feet and a 12 foot base. It is estimated from experiment that the brush discharge losses of the line will be about one kilowatt per mile.

The year 1910 marked the introduction of 110,000 volt transmission in Europe. The Lauchhammer Iron Works Co. began construction on a 40,000 kilowatt system to develop power from the extensive peat deposits at Lauchhammer for transmission to its plants at Groditz and Riesa, a distance of 50 kilometres. The amounts of power and the transmission distances of European systems are generally less than in the more noteworthy American systems and the development of extremely high voltages has been distinctly an American achievement. The use of voltages above 110,000 is expected to develop slowly. Engineers are generally agreed as to the physical feasibility of higher pressure, but, unless the power to be transmitted and the distance are enormous, the economy in copper from further reduction

of the already small conductors would be slight and would probably not offset the increased cost of insulation. With extremely high pressures the mechanical strength of the line is the factor limiting its size rather than its conductivity.

**PROGRESS IN 1910.** The year 1910 was marked by a growing conservatism in new developments due largely to the financial difficulties into which many plants have fallen. Financial promoters have discovered that the ability to secure heavy and uniform all-day loads to work the expensive plants to the highest capacity is the determining factor in these ventures. The great gains in the economy of steam-power generation made possible by the advent of the large turbine units has tended to discourage hydro-electric undertakings. Aside from those mentioned above new projects of importance were conspicuously few.

Much progress was made in the unification of existing plants by tying them into transmission networks, thus increasing the financial and electrical stability of the system, permitting the most economical distribution of loads and increasing the minimum power which can be guaranteed, as periods of low water do not always affect different plants simultaneously.

The Swedish government has undertaken the systematic development of its water power resources. A 40,000 horse-power station now in operation is being doubled in capacity. A new development was begun at Porjus to be completed in 1914 with 37,500 horse-power of immediate and 100,000 of eventual development. A third station of 40,000 horse-power is to be built at Dalälven and other projects are projected as a part of the national system.

No developments of note in underground transmission are to be recorded; 30,000 volts continues to be the upper limit of insulated cable practice.

**TRANSVAAL, THE.** A province (since May 31, 1910) of the Union of South Africa; formerly a British colony. Provincial capital, Pretoria.

**AREA, POPULATION, ETC.** Total estimated area, 110,425 square miles. Population (1904), 1,262,698 (whites, 289,082). Pretoria had 36,700 inhabitants (21,161 whites); Johannesburg (the centre of the Witwatersrand gold-fields), 158,580 (83,902 whites). Schools (1908), 624 primary, with 44,451 pupils; 220 native, with 10,725 pupils. Pupils in secondary schools, 1891; in the normal college, 94.

**PRODUCTION.** The country is eminently adapted to the pastoral industries, though agriculture, still in an undeveloped condition, is practicable. Livestock: 52,168 horses; 546,829 cattle; 844,214 sheep; 157,888 swine. Gold (discovered 1871) constitutes the wealth of the country; diamonds, coal, silver, and other metals are found, and iron is known to exist. Output for four years (gold, fine ounces; diamonds, carats; coal, tons) below:

	Gold	Diamonds	Coal
1906 .....	5,792,823	1,069,392	2,892,404
1907 .....	6,450,740	2,062,855	2,883,423
1908 .....	7,059,649	2,022,687	3,012,692
1909 .....	7,299,413	1,877,486	3,623,656

Value of diamond output in 1908, £1,549,815; of coal, £794,949. Total value of gold output, from 1884 to June, 1908, £211,535,995. Persons

employed in the mines in March, 1909, 229,015 (21,814 whites, 10,527 Chinese, 196,674 Africans). In 1904 an ordinance was enacted introducing Chinese labor for the mines. In December, 1905, further immigration of Chinese was prohibited, and steps were taken in 1906 to exclude them altogether. In February, 1908, the Chinese employed in the mines numbered 30,069; in March, 1909, 10,527; in January, 1910, only 1908 were left; and by March, 1910, the last Chinaman had left the Rand.

**COMMERCE, FINANCE, ETC.** Commercial and financial totals for three years are given below, the trade (including bullion) being for calendar years, revenue and expenditure for the fiscal years 1907-8, 1908-9, 1909-10:

	1907	1908	1909
Imports ....	£15,758,944	£16,196,692	£17,010,807
Exports ....	31,268,276	33,323,590	34,128,956
Revenue ....	4,651,532	4,670,218	5,585,637
Expenditure ..	4,415,476	4,118,848	5,974,491
Debt, ..... June 30, 1908 ..	23,586,600		.....

Principal imports in 1908: machinery, £1,389,510; clothing, etc., £1,310,392; live animals, £1,275,717; chemicals and dynamite, £1,110,553; cotton goods, £574,299; wheat, etc., £499,605; iron and steel work, £498,145; meat, £493,913; sugar, £466,641; boots and shoes, £422,712; hardware, £394,475. Principal exports: gold, £29,615,059; diamonds, £1,977,521; wool, £226,908; horses and mules, £120,490; hides, skins, etc., £109,144; tobacco, £108,476; coal, £34,836. Trade with Great Britain amounted to £5,850,425 of imports and £31,787,070 of exports; with British possessions, £1,032,527 and £810,195.

The Central South African railways, which include the lines of the late Netherlands South African Railway, the Orange Free State Government Railways, and the Pretoria-Pietersburg Railway, connect the province with Delagoa Bay, Durban, and the Cape. Total length open for traffic at the beginning of 1909, 2627¼ miles; under construction, 64½. Length of telegraph lines (1909), 10,287 miles; of telephone wires, 28,615 miles; telegraph offices, 267; post-offices, 450. The post-office savings banks had (June 30, 1908) 55,705 depositors and £1,474,553 deposits.

**GOVERNMENT.** The government is administered by an administrator (1910, J. F. B. Rissik), aided by a provincial council, elected for three years. There is an executive committee of four members. The Transvaal Parliament was opened for the last time on April 6, with a speech from Lord Selbourne announcing the Royal assent to the Act of Union. The business to be settled by Parliament comprised ratification of railway schemes, the introduction of certain education bills, aiming at concentration of university education at Pretoria, a measure to regulate power schemes and the election of Senators to the new Federal Parliament. See SOUTH AFRICAN UNION.

**TREAT, CHARLES HENRY.** An American public official, died May 30, 1910. He was born in Frankfort, Me., in 1841, and was educated at Bates College and Dartmouth College, graduating from the latter institution in 1865. On leaving college he entered the business of his father, which was that of a shipping merchant. He was engaged in export and import trade with the West Indies. He took part in

the political campaign for Hayes and Wheeler in 1876 and in the following year removed to Delaware, where he engaged in the manufacturing business. He was delegate at large to the Republican National Convention in 1888, and seconded the nomination of Levi P. Morton for Vice-President. He conducted the Republican campaign in 1888, which resulted in a Republican majority in the legislature for the first time in the history of the State and the election of the first Republican Senator from Delaware. He was the leading candidate for United States Senator, but was defeated by two votes. He afterwards removed to New York and from 1892 was active in the local politics of the city and State. From 1897 to 1905 he was collector of internal revenue for the second district of New York and from 1905 to 1909 was treasurer of the United States. Shortly after the war with Spain he became associated with New York capitalists and organized the Manila Navigation Company, of which he was president. He was also president of several other manufacturing and mercantile companies.

**TREE, LAMBERT.** An American jurist and public official, died October 9, 1910. He was born in Washington, D. C., in 1832 and graduated from the University of Virginia in 1855. In the same year he was admitted to the bar in Washington and removed to Chicago. He at once took a prominent part in Democratic municipal politics and until the time of his death was conspicuous in State politics and in national affairs. In 1864 he became president of the Chicago Law Institute, and five years later he was appointed to fill a vacancy in the Circuit Court of the State. He served in this position until 1874. He took an active part in the national campaign in 1884. He was a delegate to the convention which nominated Cleveland. He was a candidate for the United States Senate following the election of President Cleveland and was defeated by one vote by General Logan. He was also a candidate for Congress in 1878 and 1880. In 1885 he was appointed United States Minister to Belgium, serving until 1888, when he became Minister to Russia, serving there one year. He was appointed in 1891, by President Harrison, Democratic member of the Monetary Commission, which met in Washington. Judge Tree acquired a large fortune, much of which he spent in beautifying the boulevard and park system of Chicago. He presented to the city two bronze statues, one of an Indian warrior on horseback, called "A Signal of Peace," and a bronze statue of La Salle. He had large holdings in Chicago real estate. He was director in many financial institutions in Chicago and in many public and philanthropic associations.

**TREMAIN, HENRY EDWIN.** An American soldier and author, died December 9, 1910. He was born in New York City in 1840 and graduated from the College of the City of New York in 1860. He enlisted during the Civil War as a private in the Seventh Regiment and served until the close of the war. In 1865 he was brevetted lieutenant-colonel of volunteers for gallant and meritorious services and also received the brevet of colonel and of brigadier-general of volunteers. He was awarded the Congressional Medal of Honor in 1892 for distinguished conduct at the battle of Resaca, Georgia, in 1864. From 1873 to 1877 he was

first assistant to the United States Attorney of New York. He took an active part in Republican politics and was several times president of the Republican Club of New York City. He was a member of several learned societies. He wrote *Last Hours of Sheridan's Cavalry* (1904); *Two Days of War* (1905); *Sectionalism Unmasked* (1907), besides many papers on military, legal and economic subjects.

**TRENGGANU.** See **FEDERATED MALAY STATES.**

**TRENT, W. P.** See **LITERATURE, ENGLISH AND AMERICAN, Essays and Literary Criticism.**

**TRINIDAD AND TOBAGO.** Two islands of the West Indies, which constitute a British colony. Area of Trinidad 1754 square miles (population in 1906, 306,830; estimated in 1910, 332,671); of Tobago, 114 (1906, 20,570; 1910, 18,751). Capital, Port of Spain (60,000 inhabitants), with a splendid harbor. Other towns of Trinidad: San Fernando (7610) and Princetown (4497); of Tobago: Scarborough (1370) and Plymouth. Of the total area (1,195,500 acres), about 559,800 have been alienated. Acres under sugar-cane, 59,000; cacao, 226,880; coffee, 4100; cocoanuts, 17,520; pasture, 20,900. From the asphalt lake near La Brea, 133,208 tons of asphalt were exported in 1908-9 (£154,363); cacao export, 51,575,104 pounds. Other products and exports are sugar, molasses, rum, bitters, timber, and fruits. Imports (1909), £3,288,826; exports, £3,218,092. Revenue (1909-10), £853,565; expenditure, £863,254; debt, £1,060,093. There are 89 miles of railway, and 1147 of telegraph and telephone line. Governor (1910), Sir G. R. LeHunte.

**TRINITY COLLEGE.** An institution of higher learning at Hartford, Conn., founded in 1823. The students enrolled in 1910-11 numbered 225, while the faculty numbered 32. Among the additions to the faculty were the following: Le Roy C. Barrett, Ph. D., professor of the Latin language and literature, vice Frank G. Moore, resigned; Max Withrow Morse, Ph. D., professor of biology, vice Charles L. Edwards; Walter L. Barrows, instructor in geology; Archer Eben Knowlton, instructor in mathematics and physics; and William H. Worrell, Ph. D., instructor in Biblical literature. During the year 1909-10 the endowment of the college was increased by pledges varying in amount from \$1 to \$100,000, the total number of subscribers being 1400, and the total amount pledged being \$500,000. The total productive funds of the college amount to about \$1,225,000. The president is F. S. Luther, LL.D.

**TROPICAL DISEASES.** The immense amount of medical work incident to the sanitation of the Panama Canal Zone not only has developed many trained observers, but has given us a much better knowledge of the diseases found in the American tropics. Now that yellow fever has been vanquished and malaria reduced to a minimum, closer attention is being given in the large hospitals in Colón and Ancon to the study of other tropical affections, particularly intestinal parasites. Brayton investigated the subject of bilharziasis (from Bilharz, the discoverer), a disease hitherto supposed to be confined to the old world, particularly Egypt. It has been called the Egyptian disease, a majority of the victims being natives of this country. The causative agent, a trematode of the genus *Bilharzia*, has spread from Egypt to Tunis, the Sudan, Abyssinia, Uganda,

the Congo, Natal, etc. It is also found in Mecca, and from here it is distributed by pilgrims to the rest of Europe, and to Syria and Russia. The seaports of China and India are also known to be infected, and there are many cases in the Philippines. The presence of the disease in America is believed to be due to importation by Hindu laborers who work in the English colonies of Trinidad and British Guiana. The disease is not widely prevalent in the Canal Zone, having been found only 104 times in 30,000 stool examinations, from 1904 to 1909.

The *Bilharzia hæmatobia*, or human blood fluke, is a two-sexed trematode, about one-third of an inch in length, which lives on and in the blood, being provided with suckers, and the male having spinous papillæ upon the back, by means of which it clings to the walls of the veins. The parasite is indigenous to fresh water, and is supposed to be taken into the human organism through drinking water, eating shell fish, or possibly by bathing. Workmen who are much in the water are mostly affected.

The portal vein is the principal resort of the blood fluke, but it has also been found in the liver, in the intestinal veins, in the bladder walls and in pelvic blood vessels. Attaching themselves to the walls of the urinary passages, the flukes sometimes occasion dangerous hemorrhage into the bladder, as well as cystitis and urethritis. When the intestinal tract is invaded, the symptoms may resemble those of tropical dysentery. Colloidi in Egypt showed that *Bilharzia* was the starting point of urinary calculi in 80 per cent. of one series of cases. The victim of this disease becomes weak and cachectic, but recovers under treatment for the urinary or intestinal trouble.

Further investigations into the intestinal parasitology of the Filipino were made. Brewer reported the finding of intestinal parasites in over 90 per cent. of children examined. The worms, in order of frequency, were: *Ascaris lumbricoides* (76.4 per cent.), *Trichiuris trichiura* (51 per cent.), hook-worm (35 per cent.), and cestodes and amœbæ in about 5 per cent. of all cases examined.

An interesting fact concerning Malta fever has recently come to light, namely that the disease is spread almost entirely by goats. These animals do not themselves discover any symptoms, but their milk contains the germs of this disease, and through this medium it finds its way into the human victim. The prohibition of the use of goats' milk has completely abolished the fever in the soldiers and sailors at Malta, although the native population, who refuse to believe that the disease is spread in this way, still continue to suffer. Last year the Sleeping Sickness Bureau of the Royal Society found that goats, imported to Lake Albert Edward in Uganda, were spreading the disease among the native population in this district, and representations were made to the British House of Commons to prevent the exportation of Maltese goats. Some of these animals, imported into the United States in 1906, were found to be infected, and all had to be slaughtered, even the kids born here, to prevent the spread of the disease.

A new form of trypanosomiasis was reported by Chagas of Brazil. It is caused by a trypanosoma, which he has named *Schizotrypanum cruzi*. The parasite was found in the

hind gut of the barbiero, a large nocturnal biting bug infesting the dwellings of the poorer classes. This bug belongs to the order *Hemiptera*, suborder *Heteroptera*, family *Reduviidae*, genus *Conorrhinus*. It is about an inch long and bites its human victim chiefly in the face. Children, especially, are attacked, and the course of the illness is characterized by extreme anemia, oedema, general or partial enlargement of the lymph glands, thyroid, and spleen, and functional disturbances of the nervous system. Some of the victims become imbeciles. The mortality is high, death occurring with convulsions. The disease differs from African trypanosomiasis (see SLEEPING SICKNESS) in that somnolence is not a symptom. See also BERIBERI and PELLAGRA.

**TROWBRIDGE, W. R. H.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**TRUAX, CHARLES HENRY.** An American jurist, died January 14, 1910. He was born in Durhamville, N. Y., in 1846, and was educated at Vernon Academy and at Oneida Seminary. After a period of teaching school he spent two years at Hampton College, but did not graduate. After leaving college he again taught school and was for a time principal of the Union School in Camden. In 1868 he removed to New York City and was admitted to the bar in the following year. He became interested in politics and in 1877 ran for alderman on the anti-Tammany ticket and was defeated. In 1880 he was elected judge of the Superior Court, in which position he served until 1895, when he was elevated to the Supreme Court bench. During his occupancy of the bench he handed down some notable decisions.

**TRUST COMPANIES.** See LOAN AND TRUST COMPANIES.

**TRUSTS. PRESIDENT TAFT'S MESSAGE.** In a special message of January 7, 1910, President Taft urged upon Congress the modification of the Anti-Trust act of 1890, so as to permit the Federal incorporation of concerns engaged in interstate commerce. The President argued that large aggregations of capital are not always unfair and are often necessary, in the undertaking of modern business. Yet under existing laws it is necessary for the Department of Justice to begin investigation whenever it is supposed that violations of the anti-trust law exist. This disturbs stockholders and wage-earners, as well as business in general. Such a law as he proposed, giving the government control of stock and bond issues with access to complete information regarding business method of incorporating firms, would lead to a distinction between good trusts and bad ones. Concerns not seeking a Federal charter would become an object of general suspicion. The President did not, therefore, think his proposal would reduce the value of the Sherman act in preventing the suppression of competition or the control of prices. A bill drafted under the President's supervision was presented in Congress. It provided for the voluntary incorporation of State concerns with at least \$100,000 capital stock; it provided that the Commissioner of Corporations must give his approval to sections in the charter dealing with the rules for conducting the affairs of the corporation; it gave Congress power to alter the character of any chartered corporation and to repeal the charter; other provisions restricted

the stock allowed, required annual reports on specified matters, and authorized the holding of stock and the control of kindred State corporations under certain restrictions.

This proposal was believed by some to be the most important constructive plan to be undertaken by the Taft Administration. It was pointed out that at present many large concerns are forced to have subsidiary corporations in many States owing to State laws discriminating against companies organized in other States. Then it is desirable to permit corporations to realize the advantages of consolidation. The President hoped that it would be possible to distinguish those combinations which realize desirable economies from those which stifle desirable competition.

The opposition to this proposal was based on the contention that it would weaken the Sherman Act and that only good trusts would submit, while bad ones would continue to take their chances under the existing law. Actual debate of the proposal in Congress was delayed, awaiting the decisions of the Supreme Court in the Tobacco and Standard Oil cases.

**OTHER PROPOSALS.** Meanwhile other proposals were made for regulating trusts. These proposals agreed that combination is frequently desirable, that even monopoly in some instance is more economical than competition, but that in any case government regulation is necessary. It was proposed that Federal incorporation be required; but the objection was made that this goes farther than is necessary since many corporations are efficiently regulated by competition. A still different proposal was that any trust convicted in court of harmful restraint of trade be declared an objectionable monopoly and, therefore, subject to the Bureau of Corporations in the same manner railways are now subject to the Interstate Commerce Commission. Under this plan the Bureau would have power to prevent extortionate prices, to prevent discrimination in the treatment of customers from different sections of the country, to examine books, and otherwise to control and regulate.

This proposal was objected to, on the one hand as too drastic, and on the other as likely to prove ineffective because dependent upon the delays and uncertainty of court procedure. A still further proposal made by Mr. James J. Hill was that the one needed step is a Federal commission with authority to prevent over capitalization. He pointed out the advantages of combination in removing the evils of unrestricted competition, steadying prices, reducing wastes and giving steadier employment and safer investment to workingmen. Holding that public opinion exerts effective control in the long run, and that under the operation of economic law evil combinations will be destroyed in competition with sound ones, he declared that the prevention of over capitalization will safeguard investors, remove the excuse of many companies for maintaining high prices, and prevent the concealment of enormous profits by moderate dividends on watered stock.

That the attitude of the Administration had changed during the year was shown by the recommendation in the President's annual message in December that a general attempt to revise the anti-trust law be postponed, while an effort be made to try the effect of enforce-

ment of the laws existing. He said, "It seems to me that the existing legislation with reference to the regulation of corporations and the restraint of their business has reached a point where we can stop for a while and witness the effect of the vigorous execution of the laws on the statute books."

At the close of the year the Bureau of Corporations was engaged on investigations into the steel, tobacco and lumber industries, the concentration of the ownership of water power, and the International Harvester Company.

**AMERICAN SUGAR REFINING COMPANY.** There were several prosecutions carried on against this company during the year. In the first place there were the cases growing out of the underweighing frauds which had been discovered in 1907, mainly through the investigations of Richard Parr. The company refunded to the government over \$2,600,000 in back duties. On January 4, certain employees who had already been prosecuted were sentenced to a year in prison. The court decided upon a small sentence because they were workingmen with families. On January 14, the grand jury at New York returned indictments against George R. Heike, secretary of the company, Ernest W. Gerbracht, superintendent of the Williamsburg refinery, James V. Bendernagel, cashier of the refinery, and three others employed upon the weighing docks. During their trial in June, Oliver Spitzer, the dock superintendent who had been previously convicted and sent to the Federal prison at Atlanta, Ga., and who had made a full confession, appeared as witness for the government, having been pardoned by President Taft. He recounted the history of the frauds and showed that Heike and others used both the true and the false weights in the offices of the company. Heike was convicted on one count of the indictment; Gerbracht on six counts; the jury disagreed as to Bendernagel; the other three defendants made confession of guilt. In September, Gerbracht was sentenced to two years in the Atlanta prison, with a fine of \$5000. Heike was sentenced to imprisonment for eight months and to pay a fine of \$5000. Both men prepared appeals. In June Richard Parr was awarded \$100,000 for his services in discovering the weighing frauds.

Another important case was that growing out of the suppression of the Pennsylvania Sugar Refining Company by the Sugar Trust. Mr. Adolph Segal, who owned a controlling interest in the Pennsylvania Company had, in 1903, secured a loan of \$1,200,000 from the trust through its agent, Gustav Kissel. Segal gave as security bonds and stock of his company with the added condition that its plant should not be operated until the loan was paid. Various individuals together with Kissel and Segal's agent, Harned, were indicted under the criminal section of the anti-trust law. Others pleaded not guilty, but Harned and Kissel entered the plea that the statute of limitations had run in their favor, since their alleged conspiracy to restrain trade had ended when the Pennsylvania refinery was closed in January, 1904. This plea, being sustained in the Circuit Court, was taken to the Supreme Court where it was argued in November. The government contended that the alleged offence was a continuing one, and that the defendants, having started a monopoly, must be liable for its

effects so long as the monopoly continued. The defense argued that the offense was discontinuous and could be renewed only by some overt act; and that, since a criminal intent and act must occur, the government could not hold men now guilty for intentions held years ago. The court held that a conspiracy does not end on the day when the conspirators make the agreement, but continues as long as criminal acts are committed in pursuance of the conspiracy. It said, "a conspiracy may have continuance in time." The case was, therefore, sent back to the court of original jurisdiction, where a new trial will be had to determine whether the acts of which the defendants are accused are illegal.

The same company was sued for several hundred thousand dollars of water rates by the city of New York, for water which the company had obtained secretly and fraudulently. It was stated that only a small portion of the company's water supply was secured through metered pipes. On December 22, there was reported a government investigation bearing on frauds in the drawback system, that is, tariff rebates on exports of sugar made out of imported raw sugar. It was claimed that the government had been defrauded of several million dollars in this way by the company. Collector of Customs Loeb and the United States District Attorney at New York recommended that the government accept \$700,000 offered by the trust for the drawback frauds at the Brooklyn refinery.

Meanwhile investigation was begun in December, 1909, to determine grounds for a suit to dissolve the trust as an illegal combination in restraint of trade. This investigation, according to a special report sent to Congress in May, "followed the corporate history of nearly 100 corporations, beginning in 1887 \* \* \* with the examination of the acquisition by the trust of each and all independent cane-sugar refineries up to the present time." In March United States Attorney Wise at New York met with resistance to subpoenas and efforts on the part of officials to obtain immunity. He resorted to *subpœnas duces tecum* addressed to the corporation itself. Attorneys for the corporation sought to have these quashed on the ground that it could not be required to incriminate itself. Judge Lacombe decided in favor of the government, thereby establishing grounds for a new procedure which may greatly strengthen the government in trust cases. The company produced the desired books and papers but took the matter to a higher court. To aid in the examinations carried on in New York City, grand jury inquiries were held in Colorado and in California. It was announced several times during the year that the government was about to begin this suit; but this was not done owing to the important bearing the decisions of the Supreme Court in the Tobacco and Standard Oil cases would have on such procedure.

**MEAT PACKERS.** Various suits were begun against meat packers in different parts of the country. In March two indictments were returned in the Northern District of Illinois against the National Packing Company, its constituent companies, and their officers. One sought dissolution of the combination, the other, punishment under the criminal section of the anti-trust law. The civil suit was be-

gun first, but on December 27, on petition of the government, Judge Kohlsaat of the District Court, dissolved the suit. The object, as stated by the government's attorney, Edwin W. Sims was to expedite the criminal proceedings. In September special criminal indictments were brought in the same court against Louis F. Swift, Edward F. Swift, Charles H. Swift, Francis H. Fowler, Edward Tilden, J. Ogden Armour, Arthur Meeker, Thomas J. Connors, Edward Morris, and Louis H. Heyman, charging them with maintaining a combination and unlawful conspiracy in restraint of interstate commerce and a monopoly of the trade in cattle, sheep and hogs, and in the sale of fresh meats. The indictments stated that Swift & Co. had 323 branch houses, Armour & Co., 316, and Morris & Co., 82; and that the National Packing Co. was their central agency.

In April, at Savannah, Georgia, the Armour Packing Co., Swift & Co., Morris & Co., Schwarzschild & Sulzberger, Cudahy & Co., and others were charged with combining to control prices and to destroy competition in the fresh meat trade. Proceedings were criminal.

In October, at Boston, criminal suit was begun against John Reardon & Sons Co., the Consolidated Rendering Co., and individuals on the ground that they had conspired to divide the New England territory among themselves, so as to avoid competition and to raise prices in the rendering business.

**READING AND OTHER RAILWAYS.** In June 1907 suit was begun against the six coal carrying roads which compete for the traffic from the anthracite coal region to tide water, their subsidiary coal companies and about forty individual coal companies. Thereafter two years were spent by an examiner in taking testimony. A hearing was held before the United States District Court of the Eastern District of Pennsylvania, in February, 1910, before Justices Gray, Buffington, and Lanning; and the opinion of the court was delivered early in December. In the majority opinion, which was written by Justice Gray, the charge of the government that here was a general conspiracy among defendants to control the output and prices of anthracite coal was not sustained; nor was the government encouraged in its suits against the Reading Railroad for its absorption of the Jersey Central, and against the Erie for its absorption of the New York Susquehanna, and Western. The government had further charged that the agreement between the roads and the independent operators whereby the latter agreed to sell their product to the former at 65 per cent. of the tide-water price, was a violation of the Sherman Act, and asked that such contracts be enjoined. The court ruled that there was no violation of the Sherman Act since the contracts were intrastate commerce and were contracts between individual roads and individual shippers; the injunction applied for was, therefore, denied. A third charge of the government was that the Temple Iron Co. was a combination of these roads in violation of the Sherman Act. With reference to this the court held that this company, by preventing the building of a road by independent mine operators, was a combination in restraint of trade and the company was enjoined from the further continuance of

such prevention. Justice Buffington agreed with the foregoing opinion in so far as it relates to the Temple Iron Co. but he held that the 65 per cent. contract with the so-called independent operators was likewise illegal, since these contracts were made after the formation of the Temple Iron Co. and resulted largely from this formation. The final form of the decree issued on December 20 enjoined the railways owning stock in the Temple Iron Co. from exercising control over it. As these roads owned all the stock of the company this order virtually meant the disorganization of the latter. Both sides filed notices of appeal to the Supreme Court. On December 30 it was announced that the roads had organized their collieries as separate companies. All of these companies had the same president, Mr. A. F. Law, previously manager of the coal interests of the Temple Iron Company. He retained his position as treasurer of this company. While control was thus unchanged in fact, it was thought these formal changes would help the case on its appeal.

**NIGHT RIDER CASES.** After very careful inquiry into numerous complaints of violence in the Kentucky tobacco region, indictments were brought in the United States Circuit Court, Western District of Kentucky, in February, 1910, against a number of individuals charging them with interference with interstate shipment of tobacco. Eight of these defendants were tried and convicted in April. Their fines aggregated \$3500. See KENTUCKY.

**COTTON CORNER.** In the spring the grand jury in New York returned indictments against James A. Patten, Eugene Scales, Frank B. Hayne, William P. Brown and Robert M. Thompson charging them with conspiracy to monopolize interstate commerce in raw cotton, with withholding it from the market for speculative purposes, and with selling to consumers at arbitrary and excessive prices. These suits were the outgrowth of complaints which claimed that cotton mills were forced to close as a result of the extraordinarily high price of raw cotton. The case was deemed of considerable importance because it was the first attempt under the Sherman Act to control the prices of articles dealt in on commercial exchanges. The cases were still pending at the end of the year.

**WINDOW GLASS TRUST.** In April indictments were brought at Pittsburg against all the officers of the Imperial Window Glass Company. This company was the agent of various manufacturers controlling about ninety per cent. of the hand-blown window glass produced in the United States. Since this combination was similar to that which had been declared illegal in the Wall Paper Trust case, the Attorney-General deemed it proper to bring suit under the criminal section of the law. This combination had increased prices about seventy per cent. in nine months. It controlled about eighty factories, five of which it had leased and dismantled. In a few months its profits were equal to four times its capital. It had also raised wages by forty-five per cent. On the ground that several of the concerns belonging to the price-making agreement had already withdrawn and because the defendants entered a plea of *nolo contendere* the court levied fines of \$2500 upon the company and \$500 upon each of the fifteen individual de-

fendants. The Attorney-General was considerably incensed at the leniency of the court in this case and thereafter more frequently sought sentences of imprisonment. He pointed out that the president of the Window Glass Trust had announced that the fine would be taken out of the employees and that a reduction of fifty-five per cent. in wages was made necessary by the breaking of the combination.

**PAPER BOARD ASSOCIATION.** An indictment was returned in the Southern District of New York in December, 1909, against the Albie Box Company and a number of corporations forming the Paper Board Association. This was declared to be a combination for restricting competition in the purchase of paper, for fixing uniform prices, and for increasing prices. The defendants pleaded guilty in February and were fined sums aggregating \$57,000. In April another petition praying for the dissolution of the combination was filed.

**ELECTRICAL TRUST.** On December 26, it was announced that the government was making preparations for a suit against the Electrical Trust. The change was conspiracy in restraint of trade under the patent law; suit was thus on a different basis from the other trust prosecutions. This so-called trust is composed of the General Electric and the Westinghouse Electric companies together with more than a score of minor concerns all interested in the manufacture of patented electrical supplies. It was expected that the first proceedings would be against the Association of Licensed Manufacturers of Incandescent Electrical Lamps, of which the two companies above mentioned and twenty-five minor companies were the components.

**BATH TUB TRUST.** The government brought suit in the United States Circuit Court in Baltimore to secure a permanent injunction against the Standard Sanitary Manufacturing Company and fifteen other concerns and thirty-two officers comprising the so-called Bath Tub Trust, to restrain them from continuing their price-fixing agreement. At the same time criminal proceedings against the participants were begun. This company was a combination of sixteen of the twenty manufacturers of sanitary enameled iron ware and controlled eighty-five per cent. of the business. It had practically forced some 200 jobbers to sign trade agreements to handle only the combine's products. On December 30, certain of the defendants offered to compromise the suit; the government to drop the criminal proceedings and the defendants to pay fines and agree to dissolve their combination. This proposal was rejected. At the same time it was announced that the combination was practically dissolved, since four of the parties to it had sent notices to the retail trade that they were no longer adherents to the price-fixing agreement.

**OTHER PROSECUTIONS.** Other prosecutions under way at the close of the year included the following: The suit against the Terminal Railroad Association of St. Louis, begun in 1905 had reached the Supreme Court. This association was charged with conspiracy to secure a monopoly of the terminal facilities at St. Louis. When the case was first tried in the Circuit Court, the four judges were evenly divided; the Supreme Court refused to hear it until judgment had been rendered by the Circuit Court; the latter then dismissed the government's petition,

and the case came again to the highest court on appeal. The suit to enjoin the Union Pacific Railroad Company from continuing its control of the Southern Pacific Railroad Company, was argued before the Circuit Court of the Eighth Circuit in October, but no decision has yet been rendered. Suit was begun in 1907 against E. I. du Pont de Nemours & Co. *et al.*, known as the "Powder Trust." An examiner to take testimony was appointed in September, 1908. The taking of testimony was completed and the case was soon to be presented to the Circuit Court of the Third Circuit. The suit begun in 1907 against the Reading Company and other anthracite coal carrying roads as a combination in restraint of the trade in the production and carrying of this coal was argued before the Circuit Court in the Third Circuit, but no decision was yet rendered. The suit against the American Naval Stores Company and others was begun in 1908; verdict of guilty was secured in 1909 against five individual defendants, and fines and imprisonment imposed; appeal was pending in the Circuit Court. The Southern Wholesale Grocers' Association and others were charged in June with attempting to control the trade of the Southern States in groceries and other necessities, and to prevent manufacturers from selling to wholesale grocers not members of the association. The case was pending in the Circuit Court in the Northern District of Alabama. Suit against the Chicago Butter and Egg Board including about 100 dealers, was begun in June. This was alleged to be a combination to control the prices of butter and eggs in the East and Middle West. Unfair and fraudulent trade devices were alleged. In the same month, at Cleveland, Ohio, suit was begun against the Great Lakes Towing Company, *et al.*, as a monopoly of the towing of vessels on the Lakes. This suit was deemed important because of the immense tonnage involved in the carrying trade of the Great Lakes; thus there passes through the Sault Ste. Marie Canal more than 100,000,000 tons annually. In July three concerns belonging to the National Umbrella Frame Company were fined \$1000 each in the District Court at Philadelphia for violation of the anti-trust law. In September three brick producing companies, their presidents and their sales agent, constituting the Brick Trust, were indicted at Chicago. This combination had furnished all of the city's brick for five years and the suit had city politics as its immediate background, though the companies did business in several States.

**STATE ACTIVITIES.** State authorities were also carrying forward efforts to control monopolistic combinations. In September in the Supreme Court of Missouri an ouster suit was filed against the International Harvester Company of New Jersey, a trust. The court's special commissioner to investigate declared that the company was formed for the purpose and with the effect of destroying competition. In September a State court of Arkansas declared the American Book Company not to be a trust. The State had brought suit for \$3,000,000 damages for violation of its anti-trust law. In New York eight directors of the Consolidated Milk Exchange were indicted in February for conspiracy to fix the wholesale price of milk. In March, 87 poultry dealers were indicted in New York City for conspiracy in restraint of trade. At about the same time, as a result of investigations into

the cold-storage business in New Jersey, that State brought suit against several packing concerns for illegal combination.

The Seal Ship Oyster System became so extensive by the close of 1910 that it had virtually established a monopoly of the bulk oyster trade, and was rapidly absorbing the in-the-shell trade of the Chesapeake Bay. It owned 30,000 acres of beds along Long Island Sound and Narragansett Bay, besides ninety-five per cent. of the 14,000-odd acres of the Blue Point beds of Great South Bay. It had 25,000 selling agencies. The capital of the concern was increased during the year to \$2,300,000 cumulative seven per cent. preferred and \$2,000,000 common stock.

**CANADA.** "An act to Provide for the Investigation of Combines, Monopolies, Trusts and Mergers" became effective in Canada, May 1. It was introduced by Minister of Labor, MacKenzie King, and was patterned in many respects after the Trades Disputes Act of 1907. It provided that, upon application of six citizens who complained against a corporation, a judge may order that a commission of three be named to investigate and render a decree. Such a commission is composed of one appointed by the complainants, one by the corporation, and the third by these two. This commission has the powers of a court to summon witnesses, administer oaths, and otherwise secure evidence. After extended inquiry the commission is required to publish a report, which must be accepted by the corporation within ten days upon penalty of a fine of \$1000 a day. The law also provides in lieu of such fine that protective duties may be withdrawn. Moreover, patents used to restrain trade or raise prices may be revoked.

See STANDARD OIL.

**TRYPANOSOMES.** See ENTOMOLOGY; also SLEEPING SICKNESS.

**TRYPANOSOMIASIS.** See TROPICAL DISEASES; also INSECTS AND THE PROPAGATION OF DISEASE.

**TSCHAIKOVSKY, NICHOLAS.** A Russian revolutionist who was acquitted on March 9 of the charge of revolutionary conspiracy and abetting plots against the life of the Czar. He was born in St. Petersburg about 1841 and was educated for a teacher. He followed this career for many years. He is one of the few remaining figures of the revolutionary movement in Russia from 1870 to 1875, and he is sometimes called "Father of the Russian revolution." He was the founder of the mother organization of the so-called "Tchaykovtzi" from which sprang a series of other revolutionary organizations which took part in the struggle between the Terrorists and Czar Alexander II. After being in prison several times he removed to the United States in 1875 and lived with a colony of farmers in Kansas for two years. He later went to Philadelphia and worked also as a carpenter in a shipyard in Chester, Pa. For a short time he was a member of a colony of Shakers near Mount Morris, New York. He then returned to Europe, but found it impossible to get into Russia, and in 1880 made his headquarters in London where he remained for many years. In the latter part of 1907 he returned to Russia and was at once arrested. He was imprisoned for a time, but released on bail of \$25,000. He had been in the United States in 1906 and made an address in New York City. He numbered among his friends many prominent Americans, and it was largely due to their influence that

he was released from prison pending his trial and was admitted to bail. His acquittal caused general surprise as it was almost universally assumed that he would be found guilty. His family and friends were so certain of his conviction that they donned mourning garments on the morning of the conclusion of the trial. Madame Breshkovsky (or Breschkowskaya), also a revolutionist, was tried at the same time on similar charges and was found guilty. Madame Breshkovsky was well known in the United States where she had many prominent friends. She was sentenced to be exiled.

**TSETSE FLY.** See SLEEPING SICKNESS.

**TUBERCULIN.** During the past few years, attention has been mainly directed to the value of tuberculin as a means of diagnosis rather than as a curative agency. The diagnostic possibilities of the substance having apparently been exhausted, a renewed interest manifested itself during 1910 as to its curative powers. Koch's "old" tuberculin, a simple glycerin extract of a filtered culture of human tubercle bacilli, proved to be the most reliable of several different forms of the serum. When a proper dose of this material was injected, or otherwise introduced into the circulation, a febrile reaction appeared, if tuberculosis existed in the individual so tested. The reaction to an injection of tuberculin was, therefore, looked upon as a proof, in clinically doubtful cases, of the existence of the disease. Further study showed that latent and harmless processes might cause a response to the tuberculin test, although they were of no clinical importance, and the subject could not, in fact, be considered tuberculous. Therefore, the test might be misleading. According to one observer, tubercle bacilli which were leading a saprophytic existence in the bronchial secretions of a patient suffering from cancer of the lung were responsible for a positive tubercular reaction and a mistaken diagnosis. It was formerly thought that the febrile reaction was a necessary and desirable phenomenon which attended the injection of tuberculin, and doses were gradually increased until such a reaction was provoked. Of late, the majority opinion has been that systemic reactions were both harmful and unnecessary. According to Gabrilowitch, Koch's "old" tuberculin contains not only the active curative principle, but certain toxic albuminous substances which are the cause of the reaction observed. Gabrilowitch, therefore, eliminated, by means of chemical reagents, these toxic constituents, and secured an active but nonintoxicating serum, which he called *tuberculinum purum*. With this, he was able to increase the dose rapidly, without giving rise to discomfort to the patient, or provoking a reaction. He reported that the remedy reduced fever, increased weight, induced healing, and lessened the number of tubercle bacilli in the sputum, in patients in the first and second stages of pulmonary tuberculosis. Deal went further, and used the remedy in advanced cases. He reported arrest of the disease in several cases, and a decided improvement in the symptoms of all.

Poppelmann, having in mind the same object—namely, that of administering tuberculin, while avoiding severe systemic reaction—used the von Pirquet technique of vaccination with tuberculin. The blade of a scalpel is dipped in the "old" tuberculin, and the droplet thus taken up is spread on the skin of the upper

arm. The skin is then scratched with a single stroke of the scalpel, as in ordinary vaccination. After the disappearance of local and general reaction another scratch is made, crossing the first. Then two more scratches are added on succeeding vaccinations. Poppelmann finds numerous advantages in this method over the usual more complicated techniques, in the mildness, constancy, and more gradual action of the tuberculin given in this way. He believes that the skin possesses certain biologic factors which enhance the curative and tonic action of tuberculin thus given. See VETERINARY SCIENCE.

**TUBERCULOSIS.** Robert Koch (q. v.), the discoverer of the bacillus of tuberculosis, died on May 27, 1910. His last word on the subject, a lecture before the Berlin Academy of Sciences, shortly before his death, dealt with the epidemiology of the disease and the causes which influence its death rate. Koch directed attention to the remarkable lowering of the mortality in recent years. In Prussia, and in fact in the whole of Germany, a decrease began in 1886, which has gone on steadily until, in 1908, the death rate had fallen 50 per cent. The discovery of the bacillus causing tuberculosis, established the fact of its transmissibility, and made possible intelligent preventive measures. A steadily progressing reduction in mortality started a few years after the discovery of the bacillus, except in a few places. In searching for the cause of this, Koch found that institutional care of the tuberculous—isolation—was the important factor and a better showing undoubtedly followed adequate sanitary facilities. In Great Britain, conditions are especially significant. The death rate from tuberculosis is decreasing in England and in Scotland, while in Ireland the mortality is slowly rising. Newsholme, investigating the question with the greatest care, reached the conclusion that the methods of caring for the tuberculous poor accounted for the difference. In England and Scotland, they are cared for in institutions, while in Ireland this is not always the case. In Norway, also, since special institutions were established, the death rate has fallen.

The character of living and sleeping rooms is also a determining influence in the spread of tuberculosis. In Germany, for example, the highest mortality is not in the poorest districts, but in the relatively prosperous places along the North Sea, where the beds are placed in small, cell-like rooms, from which air is carefully excluded during the night. Koch concludes that the decrease of tuberculosis is to be looked for largely from isolation of the tuberculous in especially equipped sanatoria, and from improvement of sleeping and living rooms.

The sixth annual meeting of the National Association for the Study and Prevention of Tuberculosis was held in Washington, D. C., May 2d and 3d. Reports to the Association showed that there had been a steady increase in the number of bodies organized to fight tuberculosis; State and local anti-tuberculosis associations had increased from 297 to 431, a gain of 134; the number of special dispensaries had grown from 222 to 286; the number of special sanatoria and hospitals increased from 294 to 393, and the number of beds for the tuberculosis cases had increased from 15,244 to 22,720; eleven State legislatures had enacted laws dealing with the disease. A report issued by the Association showed that the average cost

of caring for tuberculosis patients in thirty semi-charitable sanatoria scattered throughout the United States is \$1.67 per day. Expenses were twice as high in the West and Southwest as in the East. The aggregate expenditure was \$1,364,000, and the receipts \$1,548,000, 70 per cent. of which came from public appropriations and public contributions, and the remainder from patients. It was estimated that there are 300,000 indigent consumptives in the United States, and that it would cost \$50,000,000 yearly to take care of them in institutions.

Laboratory workers devoted a good deal of labor to investigating the question as to whether or not tubercle bacilli circulated in the blood of persons having localized tuberculous processes. Over a year ago Rosenberger announced that he was able to detect considerable numbers of the bacilli in the blood of practically all cases of tuberculosis. Although many other competent and careful observers declared that they were unable to confirm this report, Rosenberger still reiterated his findings, and the controversy remained unsettled. This led to the examination of water for tubercle bacilli, and it was demonstrated that "acid fast" bacilli closely resembling the tubercle bacillus existed (to what extent is still a subject of dispute) in water. It was also demonstrated experimentally that even when large numbers of bacilli were thrown into the circulation, they disappeared from the blood with great rapidity. See also VETERINARY SCIENCE.

**TUCKER, T. G.** See LITERATURE, ENGLISH AND AMERICAN, *History*.

**TUFTS COLLEGE.** An institution of higher learning at Tufts College, Mass., founded in 1852. In 1910-11 there were 1140 students enrolled in the several departments of the college, while the faculty numbered 172. During the year the faculty lost through death David Lee Maulsby (q. v.), professor of English literature and oratory. Alfred Church Lane, formerly head of the Board of Geological Survey of Michigan was appointed Pearson professor of geology and mineralogy. Mrs. Caroline S. Davies, formerly headmistress of St. Peter's School, Bayswater, London, was appointed dean of the women. Hinckley Gilbert Mitchell, D. D., was appointed professor of Hebrew and Old Testament exegesis. Colin Alexander Scott, formerly head of the department of psychology at the Boston Normal School, was appointed professor of psychology and education. Richard C. Jones, Ph. D., professor of English at Vanderbilt University, was appointed professor of English literature to succeed Professor Maulsby. Among the benefactions received during the year were those of Catherine Conant, \$5000; G. H. Frye, \$10,000; and Caroline D. M. Ballard, \$2000. The productive funds of the college amounted to about \$1,290,000 and the income to about \$53,000. Beginning with the year 1910-11, co-education in the college was discontinued and women are being provided for in Jackson College for Women. The President is F. W. Hamilton, D. D., LL. D.

**TUNGSTEN.** See ATOMIC WEIGHTS; also CHEMISTRY, INDUSTRIAL.

**TUNIS.** A French protectorate in northern Africa. Capital, Tunis.

**AREA, POPULATION, ETC.** Estimated area, 64,600 square miles; population (1908), 1,920,650 (1,703,142 natives—mostly Bedouin Arabs and Kabyles; 65,213 Jews, 38,770 French, 119,-

523 other Europeans). The capital has about 200,000 inhabitants (Europeans, 61,000). Public schools (1906), 184, with 22,366 pupils. The Mohammedans maintain 1424 primary schools, and a university at Tunis. The bulk of the population is Mohammedan, under the Sheikh-ul-Islam.

**PRODUCTION.** Agriculture is the chief occupation of the people. Area under wheat (1908), 1,087,258 acres (yield, 2,837,700 bushels); barley, 1,099,613 (6,313,882); oats, 1,005,713 (4,905,589). Olive groves cover about 200,000 hectares (exports, 1908, 16,796 metric tons of oil); cork forests, 202,600 (export, 3971 tons). In the south are about 1,250,000 date palms (export, 4631 tons). Wine output (1908), 2,200,088 gallons. Livestock (1909): 158,062 cattle; 833,562 sheep; 31,870 horses; 78,002 donkeys; 16,592 mules; 476,386 goats; 14,644 swine.

Mines in operation (1907), 32. Exports of mining products: phosphates (1908), 1,267,464 tons; iron, 74,299 (1907) copper ore, 937 tons; lead ore, 23,158; zinc ore, 32,487. Value of fisheries products (1907), 2,162,000 francs.

**COMMERCE, ETC.** The trade by countries in 1909 is seen below (values in millions of francs), with totals for three years:

	Imps.	Exps.		Imps.	Exps.
France .....	69.4	50.3	Tripoli .....	.8	.5
Gr. Brit. ....	9.4	16.8	Malta .....	.3	1.2
Algeria .....	9.4	4.7	N'lands .....	.2	2.2
Italy .....	5.4	18.8	Egypt .....	.2	1.3
Germany ...	3.4	2.6	Other .....	5.8	2.9
U. S. ....	2.4	.8			
Russia .....	2.1	.3	Imps. '09..	114,447,000 fr.	
Belgium .....	2.2	6.1	Imps. '08..	123,028,000 fr.	
Turkey .....	1.3	.1	Imps. '07..	102,860,000 fr.	
Switzerland .	1.2	...	Exps. '09..	109,166,000 fr.	
Aus.-Hun. .	1.2	1.2	Exps. '08..	94,155,000 fr.	
			Exps. '07..	103,361,000 fr.	

Principal articles of export (1909): phosphate, 28,405,000 francs; barley, 13,498,000; wheat, 4,923,000; esparto, 4,848,000; fish, 3,958,000; olive oil, 3,244,000; skins, 3,090,000; animals, 2,780,000; sponges, 1,902,000; wine, 1,445,000; woolens, 1,242,000. Vessels entered (1909), 12,609, of 4,156,119 tons. Length of railways (1909), 768 miles; telegraph lines, 2576; wires, 8917; offices, 132; post-offices, 415.

**FINANCE AND GOVERNMENT.** Estimated revenue (1910), 65,987,948 francs (monopolies, 14,637,000; indirect taxes, 14,128,700; direct taxes, 11,910,600; domains, 2,921,800; various, 3,602,240; extraordinary, 18,781,608). Estimated expenditure, 65,985,614 francs (finance, 26,420,535; public works, 21,562,698; administration, 6,466,725; instruction, 3,716,604; posts and telegraphs, 3,583,460; agriculture, etc., 2,723,780; army, 1,151,712; various, 360,000). Debt (end of 1906), 232 181,500 francs.

The reigning bey is Sidi-Mohammed en Nasser, born July 14, 1855; succeeded, May 12, 1906. Heir-presumptive, Sidi-Mohammed el Habib, born August 13, 1858. French resident-general (1910), G. F. Alapetite.

**TUNNELS.** The year 1910 was notable for the completion of large and important tunnels, particularly the East River and the Hudson River tubes of the Pennsylvania Railroad. These were put in operation during the year, as mentioned under RAILROADS. Also the Detroit River tunnel, whose electrical equipment was described in the 1909 YEAR BOOK, was regularly opened for both passenger and freight traffic.

**TRANS-ANDINE TUNNEL.** In South America,

the inauguration of traffic through the Trans-Andine tunnel marked the establishment of rail communication between the two oceans and joined Chile and Argentina by a trip of not longer duration than thirty-four hours for passenger trains. This tunnel is at an elevation of 10,600 feet above sea-level, and is on the Chilean side of the international boundary. It is about two miles in length and of single track width.

**MONT D'OR TUNNEL.** Between France and Switzerland work was commenced on a tunnel through Mont d'Or, to avoid a long detour that now exists, carrying the line over the steep grades of the Jura mountains by way of Pontarlier. In winter, there was much interruption to traffic on account of snows on the portion of the route between Frasné and Vallorbe; and the new line, although but little shorter, will save much time. The two governments have granted a subsidy of \$2,250,000 for the work which was being executed by the Paris, Lyons & Mediterranean system. As the tunnel was to be about ten miles in length, electrical operation, probably with three-phase alternating current, will be used.

**LOETSCHBERG TUNNEL.** Another difficult and costly undertaking in Switzerland was the tunnel being constructed through the Loetschberg, one of the Bernese Alps, which would bring the railway line from Berne by way of Spiez on Lake of Thun, to Brig, at the north portal of the Simplon tunnel; and will bring the line from Italy into direct communication with the region around Berne and western Switzerland. This tunnel under the Loetschberg will be 9.04 miles long from portal to portal, of which distance there will be 7.6 miles of 0.7 of 1 per cent. grade, from the north portal, then 1975 feet level, followed by 6.3 miles of descending grade partly 0.24 of 1 per cent. and partly 0.38 of 1 per cent. until the south portal is reached. In addition to this there are three curves of 3608 feet radius, a portion of the line having been re-located after construction started on account of a disastrous cave-in at a point where it crossed a prehistoric gorge.

Both the north and south approaches of the tunnel involve unusual difficulties. From Frutigen, 34¼ miles from Berne, it is 13.6 miles to the north portal of the tunnel, and of this distance, only one-tenth is level track, and two-thirds of it is on 2.5 and 2.7 per cent. grades. Furthermore, one-half of this 13.6 mile stretch is curved, the radii ranging from 984 feet to 4593 feet; and there are thirteen bridges and viaducts and twelve tunnels, two of which are 3280 feet long. One of these tunnels is noteworthy because it is helicoidal, and another is 4478 feet long and makes a right-angle bend in the line where it traverses a mountain in a group to the north of the Loetschberg. Between Brig and the south portal there will be eleven bridges and 21 tunnels, one ½ mile in length, the tunnels constituting 27 per cent. of the length of the south approach.

The existing line from Berne and Spiez to Frutigen, 34¼ miles, is operated by steam locomotives, but from Frutigen, through the tunnel and its approaches and eventually to Brig, 71¾ miles, alternating current, 2000 horsepower electric locomotives will haul trains, obtaining power from overhead conductors on catenary supports from transverse overhead bridges at 15,000 volts, single-phase. The main tunnel will be double tracked throughout. This

great undertaking is being assisted by the Federal government to the extent of \$1,200,000, and it is hoped to have it in operation in the early part of 1913. The construction of the tunnel, including drills, pumps, and ventilating blowers, is entirely by means of compressed air furnished from two compressing plants; and as the work progresses the debris is removed in cars hauled by compressed air locomotives. See also **AQUEDUCTS**.

**ELBE TUNNEL, HAMBURG.** In Germany, a tunnel was under construction during the year 1910 for the purpose of connecting the two parts of the city of Hamburg, separated by the river Elbe. The tunnel consists of two tubes 19 feet in diameter and 20 feet apart laid about 65 feet below mean tide level of the river. The tubes are of steel, the sections riveted together and lined with concrete. Compressed air was employed during the progress of the tunneling, and at each end there is a vertical shaft to the surface of the street, 72 feet in diameter and supplied with six elevators. Two elevators were to be used exclusively for heavy and bulky vehicles, two for those of medium size and weight, and two for passengers only. It is expected that the tunnels will be in use in the spring of 1911. The total estimated cost was \$2,400,000.

**TURANITE.** See **MINERALOGY**.

**TURBINE.** See **STEAM ENGINE** and **SHIP-BUILDING**.

**TURKEY, or THE OTTOMAN EMPIRE.** A constitutional monarchy in southeastern Europe, southwestern Asia, and northern Africa. Capital, Constantinople.

**AREA AND POPULATION.** The area and population (both estimates), not including the nominal dependencies or tributary states of Egypt, Crete, Cyprus, and Samos (qq. v.), are given below:

	Sq. Miles	Pop.
Turkey in Europe .....	65,367	6,130,000
Asia Minor .....	193,600	9,089,000
Armenia and Kurdistan .....	72,000	2,471,000
Syria .....	114,600	2,890,000
Mesopotamia .....	131,700	1,398,000
Arabia .....	170,300	1,050,000
Turkey in Asia, total .....	682,200	16,898,000
Tripoli and Benghazi .....	405,800	1,000,000
Total .....	1,153,300	24,028,000

There are in European Turkey about 2,000,000 Turks, nearly as many Slavs, 1,000,000 Albanians, and large numbers of Greeks. Wallachians, Jews, and Gypsies constitute most of the remainder. About 2,500,000 are Mohammedans; in Asia, the majority of the population; in Tripoli and Benghazi, almost the entire population. Constantinople has approximately 942,900 inhabitants (with suburbs, 1,106,000); Salonika, 144,200; Adrianople, 125,000; Smyrna, 225,000; Damascus, 200,000; Beirut, 185,000; Aleppo, 135,000; Bagdad, 125,000; Jerusalem, 115,000; Medina, 111,000; Trebizond, 100,000; Mecca, 85,000.

Primary instruction, free and nominally compulsory, is largely in the hands of the Mohammedan priesthood, and is extremely deficient. Secondary schools, in a few of which French or English is taught, are not numerous, and special schools are rare. Schools of all kinds

are estimated at 36,230, with about 1,331,200 pupils. The University of Constantinople (founded on paper in 1900) has not yet been realized. Besides Mohammedans, there are in the empire Orthodox Greeks, Armenians, Roman Catholics, Greek Uniates, and other Christians, and Jews.

**PRODUCTION.** The soil is generally fertile, but little progress has been made in agriculture, though it is expected that large tracts will be brought under cultivation by an irrigation scheme to be completed in (probably) five years. Primitive methods are employed, and the title and customs system effectually cripples incentive. The chief cultivated products are cereals, tobacco, cotton, olives, almonds and other nuts, and various fruits. Tobacco crop (Latakia district) in 1909, 3,300,000 pounds. Estimated area under tobacco in all Turkey in 1909, 107,368 acres (1908, 120,567), yielding 74,445,244 pounds (1908, 108,248,904), an average of 694 lbs. per acre (898). Unofficial estimates place the average olive-oil yield at about 45,000 tons (season of 1908-9 much less—about 22,500 tons); the valonia crop, at 140,000,000. The world's supply of Mocha coffee comes from Yemen; it is all grown for export, as the Yemen Arab never uses it himself. About 21,000,000 acres are under forest (in European Turkey, 3,500,000)—pine, fir, beech, oak, cedar, sycamore, chestnut, walnut, etc. Sheep-raising is a prominent industry. Silk is produced, as well as carpets, shawls, leather, firearms, cotton and woolen goods, etc. The fisheries are valuable.

The extensive mineral resources are little developed. The government silver mines produce about 2600 kilos of silver and 400 tons of argentiferous lead annually; output of silver (all Turkey) in 1907, 67,351 fine ounces. Chrome, manganese, antimony, and copper ores are exported. Other mineral products are coal and lignite (400,000 tons annually), iron (40,000), iron pyrites (83,000), gold (226 ounces), salt (335,923 tons), borax (7000), meerschaum, mercury, kaolin, and arsenic.

**COMMERCE, ETC.** Total imports and exports for 1909 are given at £T22,230,000 and £T26,100,000 respectively (the Turkish pound is worth \$4.40); 1908, £T25,100,000 and £T21,315,000. No details of the principal articles of trade are available later than for the year ended February 28, 1906, as given in pounds Turkish below:

Imports	Exports
Cottons..... £T4,090,000	Raw Silk*.. £T2,930,000
Sugar..... 2,840,000	Raisins..... 2,350,000
Cereals, etc..... 1,560,000	Cereals, etc. 1,880,000
Linen..... 1,045,055	Mohair..... 914,000
Yarn..... 1,470,000	Figs..... 902,279
Woolens..... 1,300,000	Coffee..... 889,004
Rice..... 1,077,243	Opium..... 729,127
Petroleum..... 1,037,198	Skins, etc..... 730,000
Coffee..... 946,570	Valonia..... 625,224
Cashmere..... 639,820	Vegetables..... 590,000
Carpets..... 570,000	Minerals..... 554,082
Iron Mfrs..... 550,000	Fruits..... 550,000
Iron..... 490,000	Carpets..... 546,050
Paper..... 390,000	Cotton..... 512,575
Timber..... 388,418	Wool..... 500,000
Yarn (other)..... 360,000	Eggs..... 503,061
Drugs, etc..... 357,495	Olive Oil..... 420,802
Leather..... 341,946	Dates..... 340,000
Skins, etc..... 330,000	Sesame..... 310,000
Animals..... 320,000	Nuts..... 290,000

\*And cocoons.

The trade by countries is as follows in thousands of pounds Turkish for the same year:

Imps.	Exps.	Imps.	Exps.
Great Brit..... 10,992	6,330	Persia..... 734	65
Aus. Hun..... 6,516	2,137	Neth's..... 597	581
France..... 2,669	4,811	Greece..... 561	644
Italy..... 2,446	996	Bulgaria..... 467	756
Russia..... 1,820	594	U. S..... 288	592
Germany..... 1,325	1,228	Other..... 243	251
Belgium..... 986	488		
Egypt..... 926	....	Total Imps. £T31,366,021	
Rumania..... 795	400	Total Exps. 19,672,370	

The above figures are exclusive of the trade in tobacco, of which the imports are detailed as follows: 6,926,631 cigars, 2867 kilos of tobacco, 17,796 of snuff, and 1,237,404 of tumbéki; exports: 3,465,958 kilos sent to countries within the empire, and 18,110,646 to foreign countries. Vessels entered at Constantinople (1908), 14,709, of 13,261,446 tons; at all ports of the empire (1905-6), 47,265 steamers, of 44,257,892 tons, and 129,796 sailing vessels, of 2,293,977. The mercantile marine included (1909) 110 steamers, of 69,440 tons, and 936 sailing vessels, of 202,609.

**COMMUNICATIONS.** Total railway lines open to traffic (1909) in the empire, 4075 miles, detailed as follows (the lines marked with an asterisk having a kilometer guarantee from the government): Turkey in Europe 1239 (Salonika-Monastir,\* 136; Constantinople-Salonika,\* 317; Oriental Railways, 786); Turkey in Asia, 2836 (Haidar Pasha-Angora,\* 358; Eshki Shekir-Konia,\* 283; Mudania-Brusa, 25; Smyrna-Cassaba,\* 165; Alasheir-Aflon-Karahissar, 156; Smyrna-Aidin, 320; Konia-Eregli-Persian Gulf,\* 125; Mersina-Adana, 42; Beirut-Damascus, 96; Rayak-Aleppo,\* 295; Damascus-Medina, 812; Jaffa-Jerusalem, 54; Haifa-Dersaa, 105). Guarantees paid in 1909, £T798,610. Projects for over 6000 miles of new lines and extensions are under consideration. Telegraph lines (1906), 28,890 miles; wires, 49,200; offices, 1017; post-offices (Turkish), 1312 (foreign post-offices are maintained in the larger coast towns).

**FINANCE.** The unit of value is the piastre (worth about 4.4 cents); 100 piastres equal one pound Turkish. The first official budget, published for the fiscal year 1910, showed estimated revenue, £T25,079,062; expenditure, £T30,539,545. For the fiscal year 1911 the estimates were placed at £T26,015,101 and £T32,997,772. The details below are in thousands of pounds Turkish:

Revenue	Expenditure
Direct taxes:	
Land..... 2,599	Finance and debt.. 11,543
Professions..... 409	War, etc..... 9,500
Exemption..... 1,290	Pub. security..... 1,757
Prestation..... 554	Marine..... 1,640
Tithes..... 6,747	Interior, etc..... 1,370
Live stock..... 1,804	Commerce etc..... 1,161
Mines, etc..... 175	Instruction..... 946
Licenses..... 58	Posts and Tels..... 790
Indirect taxes:	Justice, etc..... 764
Customs..... 4,218	Hedjaz Ry..... 616
Other..... 608	Sheik-ul Ilamat..... 499
Monopolies..... 3,341	Civil list..... 494
Gov. enterprises..... 403	Indirect taxes..... 478
Domains..... 513	Agriculture, etc..... 396
Tribute..... 894	For. Affairs..... 259
Stamps..... 1,113	Legislative..... 217
Various..... 1,289	Various..... 568
Total..... 26,015	Total..... 32,998

The total debt stood, March 14, 1910, at £T120,733,242. A loan of £T7,000,000 was raised in 1909. Other debts not loans are the Russian

war indemnity—£T24,513,000 in 1898, on which a payment of £T350,000 falls due annually on January 14; and £T273,494 for the Damascus (Hedjaz) Railway. Russia relinquished, in 1909, 40 out of 74 annuities.

The Imperial Ottoman Bank (capitalized at £T10,000,000) had, December 31, 1908, cash £T3,621,093, and notes in circulation, £T840,041. According to the French economist, Leroy-Beaulieu, four-fifths of the bank values in Turkey belong to the French (largely in the Ottoman Bank and the Bank of Salonika). France also holds over 55 per cent. of the public debt, Germany 30, Great Britain 5. The Ottoman National Bank is largely under British influence; and a Russian bank was opened at Constantinople in 1909.

**NAVY.** The reconstruction plan is still scarcely more than a plan; a number of ships have, however, been purchased from Germany: 2 battle-ships (launched 1891), for which £T990,000 was paid; and four new destroyers (S165 to S168), costing £T400,000. On account of ill-health, Rear-Admiral Sir Douglas Austin Gamble resigned in January, 1910, his post as naval adviser (British) to the Turkish government, and Rear-Admiral Hugh P. Williams was appointed to succeed him. He is assisted by six junior British officers in his task of reorganizing the navy. Besides the Makhussa Fleet of about 75 steamers of various kinds used by the government and available as transports, store-ships, and coast-guard cruisers, the effective fleet in 1910 included 42 warships, of 56,784 aggregate tons, detailed as follows: 4 battle-ships, aggregating 33,930 tons; 4 armored corvettes (10,406); 2 protected cruisers (7050); one torpedo vessel (900); 2 torpedo dispatch boats (1400); 5 torpedo-boat destroyers (890); 18 torpedo boats (1612); 6 submarines (596). Under construction (1910), 19 vessels, of 28,243 aggregate tons, as follows: 2 armored cruisers (14,273); 2 first-class (8100) and second-class (3200) protected cruisers; 2 torpedo vessels (1550); 11 torpedo boats (1120). Personnel, 31,000 officers and men and 9000 marines.

**GOVERNMENT.** Under the constitution of 1908, the sultan, who is the protector of the Moslem faith, appoints and dismisses ministers, concludes treaties with foreign powers, declares war, is head of the military and naval forces, and can dissolve the chamber of deputies, but a new election must follow within six months. The legislative body consists of a senate and a chamber of deputies, and meets annually. The reigning sultan, Mohammed V, was born November 3, 1844; succeeded April 27, 1909. Heir-presumptive, Youssef Izzedin Effendi, born October 9, 1857 (cousin). The ministry (1910) was as follows: Premier (Grand Vizier), Ibrahim Hakki Pasha; Sheikh-ul-Islam (head of the church), Moussa Kiasim Effendi; Foreign Affairs, Rifaat Pasha; Interior, Talaat Bey; President of the Council of State, and Minister of Justice and Worship, Nedjmeddine Bey; War, Mohammed Shevket Pasha; Marine, Mohammed Moukhtar Bey; Finance, Djavid Bey; Pious Foundations (Evkafs), Sherif Ali Haider Bey; Instruction, Emroullah Effendi; Agriculture, Mines, and Forests, Mavrocordato Effendi; Commerce and Public works, Halladjian Effendi; Secretary of State of the grand-vizierate, Adil Bey.

**ARMY.** An Imperial Irade adopted during the year sanctions the control by the Minister of

War of the reorganization of the light cavalry called the Hamidich. The object of this reorganization is to utilize the valuable military reserve supplied by the tribes of Kurds. There were to be formed 65 regiments of light cavalry from these tribes, so far as possible, each regiment from men of the same tribe. They comprised from 4 to 6 squadrons, each squadron divided into 4 platoons of from 32 to 48 men. Each regiment was to be commanded by a lieutenant colonel of the active army assisted by a chief of the tribe as major. If a regiment is formed from two tribes there will be for each a native major. In the same way the squadrons were to be commanded by captains from the active army assisted by a lieutenant of the active army and 3 native subalterns. A certain number of regiments will be grouped to form a district, at the head of which will be a colonel or brigadier general assisted by three officers of different rank. The time of service is to be 27 years, from 18 to 45 years of age. The first three years comprise the preparatory period; the twelve following the active period and the twelve last the period of relief. During these 27 years the troops of the tribes will be assigned to all the regiments in accordance with the rules of the regular army.

By imperial decree the organization of the army increased the number of corps to 14 and the number of independent divisions to 5. There were to be formed seven different groups. The first consisting of a corps of three divisions was to have its headquarters at Constantinople; second, three army corps with headquarters at Adrianople, Kirk-Kilisse, and Rodosto; third, three army corps of three divisions with headquarters at Salonika, Uskub and Monastir; fourth, three army corps of which one is divided into three divisions and two into two divisions with headquarters at Erzizian, Erzerum, and Van respectively; fifth group, one army corps of three divisions with headquarters at Damascus; sixth group, two army corps of two divisions each with headquarters at Bagdad and Mosul; seventh group, an army corps of two divisions with headquarters at Sana. Finally there are a mixed independent division at Mecca and a division at Tripoli. There are in all in the army 42 divisions. These divisions are not all to be constituted in the same way as regards their infantry. Those of the first type include three regiments of three battalions each, in addition to a skeleton battalion and a battalion of nichandji or tirailleurs, that is 10 battalions in peace and 13 in time of war. Those of the second type will be formed from 7 active battalions in time of peace and 10 in war time. This reorganization was designed to lend itself to a progressive increase in the army. Artillery was reorganized into 4 gun batteries of which were 139½ in place of 93. The Minister of War decided to form a special corps of volunteers who had completed their term of military service as frontier guards, 22 companies in number called Hondoudi. Each company will have an active strength of 200 men with 4 officers, located as follows: 7 on the Bulgarian frontier, 5 on the Servian, 2 on the Austrian, 3 on the Montenegrin, and 5 on the Greek; 10 Sowars or mounted men will be attached to each company. This step will release a large number of isolated commands of the regular army.

The total budget of national defense in 1910-11 amounted to £T9,500,000, as compared with

£10,440,000 in 1909. The credits voted follow:  
 For the Minister of War .....£6,971,012  
 Grand Master of Artillery .. 300,159  
 Minister of Marine ..... 842,380  
 Gendarmerie .....1,427,004

The war strength of the Turkish army is well over 1,000,000. The Nizam or regular troops amount to about 260,000 in the first line with a reserve known as the Redif or Landwehr with its two classes and the Mustahfiz which go to swell the fighting force (though concentration of the army would be difficult.

### HISTORY

**THE NEW MINISTRY.** The new cabinet was announced on January 12, under Hakkı Pasha, Grand Vizier, who in a speech on January 24, proclaimed the government programme. The Chamber voted confidence by 187 to 34. As to martial law, the Grand Vizier said that although exceptional measures were still necessary to prevent disorder, the policy of the Ministry was to restore the normal state of affairs by wise measures. As to the reorganization of the departments, he declared that the principle of the separation of powers had been disregarded and that the Chamber had absorbed functions that were outside its sphere. The Cabinet would thenceforth assume the responsibility which belonged to the executive. The programme contained in addition promises of legislation as to landed property and as to the granting of concessions. In respect to Crete, the government declared its willingness to grant the widest measure of autonomy consistent with the maintenance of Turkish sovereignty.

**THE ALBANIAN UPRISING.** On April 3, on the occasion of a meeting to protest against the octroi, a collision took place between the Turks and Albanians in the Prishtina District, and on the following day a large body of Albanians marched upon Prishtina and encountered a force of Turkish troops at the Lyab River, where an indecisive engagement took place, lasting for about 48 hours. The Ottoman government determined on prompt and decisive measures and soon dispatched reinforcements to the scene. Albanian reforms had been under consideration for some time at Constantinople. The policy of the government in Albania included the collection of arrears of taxation, capture of outlaws, seizure of government rifles appropriated by clansmen and the registration of population. Before the end of April three Albanian forces were already in the field and the situation was very threatening, the Turks having met with reverses at several points. The Albanians gained possession of Katchanik Pass, but on April 29-30 it was recaptured after hard fighting by the Turkish troops with a loss of 142 killed and wounded. The Turkish troops under Mohammed Shevket Pasha now advanced on both sides of the Pass against the rebels. On May 16 Mohammed Shevket Pasha began the systematic disarmament of the villages in the disturbed district after a disarmament proclamation had been issued requiring the surrender of all arms within a week's time. The Turkish troops were to search the houses, but to treat the inhabitants considerately. By May 12, 35,000 Turkish troops in High Albania and eight more battalions were to be transferred from the Adrianople army corps. These and other reinforcements were expected to bring the Turkish forces

in Albania to 50,000 men. The Turks showed unusual energy in crushing the revolt. Early in June it was officially announced that the rising was at an end; but in the latter part of December it was reported that some 2000 Albanians were still under arms, and were threatening to continue their resistance unless the government complied with their demands. These included amnesty for Albanian political prisoners, educational freedom, the opening of Albanian schools closed by the government, the removal of restrictions from the press, and the right to use their national language.

**TROUBLE WITH THE DRUSES AND KURDS.** The Druses, who for ten years had been carrying matters in their own way in the region of Hauran and by their raids and feuds kept the inhabitants in a state of insecurity, started on an expedition in the summer of 1910, which resulted in the pillaging and burning of villages and the killing of some 60 persons. The marauders numbered only about 1500 and against them there was soon concentrated a large Turkish force amounting to about 16,000 men. Meetings of the Druse chiefs were held and submission was decided upon. The leader of the Druses finally surrendered in the latter part of September, but the fighting in Hauran continued in November. Occupying a strong position near Safa, they succeeded in inflicting serious losses on the Turks who, however, finally drove them out. They fled to the desert. The Kurds on the Persian frontier were also giving trouble at this time. Fifty of the Ottoman troops were killed in an engagement with them.

**THE TURKISH LOAN.** Long negotiations took place between the Turkish and French governments in the summer and autumn for the loan to Turkey of £T5,000,000. The latter government finally agreed to admit the Turkish loan to quotation on the Paris Bourse, providing two French officials should be appointed to governmental positions in the Finance Department in Turkey. This was refused by the Turkish government, and negotiations were broken off at the end of October. Contracts for the loan were finally completed with an Austro-German syndicate on November 9.

**FOREIGN RELATIONS.** Turkish foreign policy in 1910 was marked by a tendency to turn away from France and Great Britain and toward Germany and Austria. The failure to place the loan in France brought that country into disfavor, and Great Britain and Russia were unpopular through their policy in Persia (q. v.) and for other reasons. Turkey has for a long time been demanding the abolition of the Capitulations. To this Austria-Hungary is pledged but the Capitulations are regarded by the other Powers general as essential. For the difficulty over Crete see CRETE and GREECE, paragraphs on *History*. For relations with Bulgaria, see BULGARIA, *History*. In the latter part of September it was reported that an important military agreement had been reached between Turkey and Rumania to the effect that in case of any conflict between Bulgaria and Turkey, Rumania would mobilize her army corps along the Bulgarian frontier. This occasioned varied comments in the foreign press. In France fear was expressed that Germany was behind this action on the part of Rumania, Germany being anxious to regain the paramount influence at Constantinople that she had formerly exerted, and seeking to do so by means of Rumania.

**OTHER EVENTS.** The Chamber was prorogued on June 28. The boycott of Cretan goods continued to spread rapidly from Constantinople and it was announced that it would be kept up so long as the Cretan question was not settled. In July, Dr. Riza Nur, Deputy of the Chamber, who had been formerly a member of the Committee of Union and Progress, was arrested on the charge of complicity in a plot to overthrow the existing government. Others were also accused and made admissions which led to the arrests of accomplices. Dr. Riza Nur and fifty others were subjected to a preliminary examination and then summoned for trial by court-martial. The Chiragan Palace, the meeting-place of the Turkish Parliament, was destroyed by fire on January 19.

**TURKS AND CAICOS ISLANDS.** Two groups of West Indian islands, forming a dependency of the British colony of Jamaica. There are over thirty islands, only eight inhabited. Area, 169 square miles; population, 5287, of which the principal island and government seat, Grand Turk, has 1751. Salt making is the principal industry, yielding about 1,800,000 bushels annually. Imports (1909), £25,262; exports, £18,936; revenue, £7748; expenditure, £8654. Commissioner (1910), F. H. Watkins, under the direction of the governor of Jamaica.

**TURLEY, THOMAS BATTLE.** An American public official, formerly United States Senator from Tennessee, died July, 1, 1910. He was born at Memphis, Tenn., in 1845. He served throughout the war as a private in the Confederate army. He graduated from the law department of the University of Virginia in 1867 and from that time practiced law in Memphis. He was appointed United States Senator in 1897 to fill a vacancy and was later elected by the legislature to succeed the late Isham G. Harris, whose term expired in 1901.

**TURNACHON, FÉLIX.** A French journalist, caricaturist and aviator, died March 20, 1910. He was born in Lyons in 1820. He did newspaper work in that city until he was twenty-two years old. He then went to Paris where he did journalistic work. After a brief absence in Germany in 1848 he returned to Paris and founded the *Revue Comique*. He contributed also to a number of other publications. His writing was done under the pseudonym "Nadar," under which he became widely known. In 1863 he became interested in aeronautics and built an unsuccessful aerostat. During the Franco-Prussian war he was one of a company of observers who used captive balloons in the Place St. Pierre, Paris.

**TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE.** An institute for the training of colored young men and women, at Tuskegee, Ala., founded in 1880 by Booker T. Washington. The attendance for the year 1909-10 in the several departments of the institute was 1662, while the faculty numbered 167. The institute carries on, in addition to class room and technical work, what may be designated as extension work. This includes the annual negro conference with its numerous branches, the publication of a weekly farm paper, a short course in agriculture, farm demonstration work, supported by the United States government and the General Education Board, a town night school, and a town day cooking school, a county ministers' institute, ministers' night school, National Negro Business League,

and a general effort to cooperate with county officials to improve the county schools. The amount of the productive funds of the institute for the year 1909-10 was \$1,401,440. The equipment is valued at \$1,000,000. The President is Booker T. Washington.

**TWAIN, MARK.** See CLEMENS, SAMUEL LANGHORNE, and LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**TYPHOID FEVER.** The importance of the "carrier" (the person in health who spreads typhoid) having become generally recognized, many investigations were made during 1910 to find a way to detect these persons, to discover the reservoir of the bacilli, and to eradicate them from the bodies of the "carriers." Typhoid "carriers" are usually detected through an examination of their excreta, but Gaehetgens and Hamilton have shown that a presumptive infection may be inferred from an examination of the blood. Persons harboring typhoid bacilli always show a high opsonic index; that is, the blood of a "carrier" exhibits an antitoxic action toward cultures of typhoid bacilli not presented in the blood of normal individuals. The Widal reaction, too, is a help, though less certain, in the detection of "carriers." As to the favorite places of occurrence in the body, autopsies have proved that the chief lurking places were the gall bladder and the small intestine. Enormous numbers of bacilli were found in the bile in pure culture. The urinary tract also may harbor and excrete large numbers of the germs. The problem of ridding "carriers" of their infection was far from being solved. Three methods seemed to be available. Opening and draining the gall bladder is obviously feasible in only a few cases, "carriers" naturally objecting to such a serious surgical operation. Drug treatment has proved only partially successful, although Hilgermann, of Coblenz, reported that he had used sodium salicylate effectively in three cases. This drug was given, in 15 grain doses, from three to five times a day, for a week at a time, repeating such a course of treatment four or five times a year. By this means the excreta were rid of all bacilli. The method cannot be considered reliable, however, until it has been tested on a larger number of cases. A third method—that of anti-typhoid vaccination—was also tried, with reported success. Two to five per cent. of those who recover from typhoid remain "carriers" for months or years. The situation is, moreover, further complicated by the fact that individuals, who have never had an attack of typhoid fever, may become "carriers" from contact with a typhoid case. Nurses, orderlies in hospitals, etc., are liable to be infected in this way, without ever showing definite signs of the disease. Park of New York has estimated that one out of every 500 adults is a bacillus "carrier."

The practice of prophylactic vaccination against typhoid increased steadily during 1910, especially in military and naval organizations. The latest statistics available as to the value of vaccination are those of Leishman, which extended from the beginning of 1905 to June, 1908. In 5473 soldiers (in the Boer War) vaccinated against the disease, 21 took it, and 2 of these died. In 6610 soldiers, practically in the same surroundings, who were not protected by vaccination, there were 187 cases, and 28 deaths. There were, therefore, 3.8 cases per thousand among the vaccinated, as against 28.3

per thousand among the unvaccinated soldiers. In the inoculation, dead bacteria are used, from 500,000,000 to 1,000,000,000 being given at a dose. Vaccination is attended with various degrees of malaise and local tenderness at the seat of injection, fever, nausea, and vomiting, but these discomforts are evanescent and are amply compensated for by a fairly certain protection against the disease. See ENTOMOLOGY, paragraph *Typhoid Fly*.

**TYPHOID FLY.** See ENTOMOLOGY.

**TYRRELL, R. Y.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**UGANDA PROTECTORATE.** A British dependency in East Africa. Total area, 117,681 square miles. It is impossible to give accurate figures for population; a recent attempt at a native census returns 2,657,110 (males, 1,110,724) for the colored population and 507 (388 males) for the white. There are five provinces: the Eastern Province (divided into the Karamoja, Busoga, Bukedi, and Lolor districts); Rudolf Province (Turkivel, Turkana, and Dabossa); the Northern Province (Bari, Unyoro, Achole, Latuka, and Lango); the Western Province (Toro and Ankole); and Uganda Kingdom, with islands. Native capital of Uganda, Mengo; British headquarters, Entebbe. There are mission schools. There are reported under cultivation, in 1908-9, 3,475,157 acres (of which about 2,500,000 pasture). Cotton is a staple crop—about 1815 tons in 1908-9; other crops are plantains, ground nuts, sweet potatoes, cacao, rubber, chillies, and corn. Various minerals occur. Total imports (1908-9), £419,303 (of which specie and bullion, £47,027); exports, £257,028 (specie and bullion £43,973). Exports of home produce, £127,175 (cotton, ginned, £30,000, unginned, £11,299; ivory, £27,072; skins, £24,485; hides, £12,436; rubber £6366; ghee, £5356). Vessels entered, 250, of 81,498 tons. Telegraph lines, 627 miles; offices, 10; post-offices, 15. Communication is by means of steamers which ply the inland waters. Local revenue (1908-9), £102,572; grant-in-aid, £95,000. Expenditure, ordinary, £212,090; extraordinary (for public works, £34,185; Usoga famine, £10,062), £44,247. There is no debt. Reigning king of Uganda, Daudi Chua (born, 1895; succeeded, 1897, under a native council of regency). Governor and commander-in-chief (1910), Captain H. E. S. Cordeaux. In the latter part of the year there were some tribal raids to the south of Lake Rudolph, arising from quarrels between tribes of the Uganda East African frontier. Reinforcements were sent to the neighborhood.

**ULTRA-VIOLET LIGHT.** See CHEMISTRY.

**UNEMPLOYMENT.** The report of the Massachusetts Bureau of Labor showed the proportion of unemployed in 845 unions with 120,000 members to be 5.6 per cent. September 30, as compared with 7 per cent. on June 30, 7.06 per cent. on March 31, 9.36 per cent., on December 31, 1909, 4.8 per cent. on September 30, 1909 and 10.6 per cent on September, 30, 1908. About 75 per cent. of the idleness at these various dates was due to lack of work; and most of the remainder to disability, such as old age, sickness, or accident.

The *New York Labor Bulletin* showed that in about 190 unions in that State with over 95,000 members, the average idleness for the first six months of 1910 was 19.2 per cent. as com-

pared with 22.3 per cent for the first six months of 1909, 34.7 per cent. for 1908, and 14.7 per cent for 1907. The average for the same six months of 1902 to 1907 was 16.1 per cent. In 1910 those idle because of trade disputes were 3.6 per cent.; because of disability 1.4 per cent.; the condition of trade was the chief cause, although trade disputes was a more important cause than in any recent years. The proportion of idle members among reporting unions was 28 per cent in the building trades, 18.4 per cent. in transportation, 30.1 per cent. in clothing, 17.4 per cent. in tobacco, 11.6 per cent in woodworking, 7.2 per cent. in metals, and 9.2 per cent in printing.

The reports show that, while unemployment was somewhat greater than in good years, it was a great deal less than in times of real depression. Unemployment is a social disease whose intensity increases at an accelerated ratio as its amount increases. There was consequently little of that acute distress noted in the winter of 1907-8 or 1908-9.

**GREAT BRITAIN.** Reports of the Board of Trade showed the percentage of unemployment to be only about one-half that of 1909 though greater than in the busiest years. It was 6.7 per cent. January 31, 3.7 June 30, and 3.8 per cent. July 31; these last were almost one per cent. below the ten-year average, and compared with 8 per cent. July, 1907. Moreover the introduction of a comprehensive system of labor exchanges (q. v.) was calculated to relieve the worst situations.

A report of the Departmental Committee on the Employment of Children's Act of 1903 dealt exclusively with the question of street trades. The statistics showed that from 60 to 75 per cent. of the children licensed as street sellers of newspapers, matches, and shoe blacking, and for the delivery of goods were under 14 and that their earnings ranged from 25 cents to \$2.50 per week. The majority report stated that a child match-seller is likely to become a beggar and a newsboy, a gambler. It also emphasized the dangers of street trades to girls, the general unhealthfulness of such trades for both boys and girls and the fact that little of the money thus earned goes regularly to family budgets. The minority while admitting undoubted evils emphasized the difficulty of betterment. The majority favored the prohibition of street trading for boys under 17 and for girls under 18; the minority favored a very gradual change in the law. The latter pointed out that the failure to enforce the existing law is a poor basis for the demand for further legislation; and urged the consideration of the facts that the street traders come from the poorest homes, that earnings do in many cases go to family support and that abolition may lead to still more deplorable homework. Both reports agreed that the prohibition of street trading for children of school age is desirable.

**GERMANY.** As in other nations increased attention to the problem of unemployment has gone on in Germany with the growth of feeling that the individual alone is not entirely responsible for his economic and social position; that he is often the victim of unfortunate or unfavorable events over which he has no control; and that, therefore, society is largely responsible. In Germany this feeling is stronger than in either England or the United States, and has led to provision for the sick, the aged and de-

fectives. Recently public men have recognized that poverty is frequently due to inability of able and willing persons to find work; and that society will profit by preserving such persons from becoming unfit or inefficient because of enforced idleness. Munich, Dresden, Cologne, Strassburg and a score of other leading cities have adopted some form of unemployment insurance. Two general plans have been followed. By one of these the city provides an insurance fund, derived from employers, employes and the city treasury, and operated by city officials. By the other the city subsidizes trade unions which pay unemployment benefits. In the latter case the city takes care of non-union unemployed by relief work. Under the former plan insurance may be provided for a limited number of weeks during the winter or for the entire year, depending in either case on the length of time the beneficiary has made weekly payments. In Cologne such insurance is provided for the winter months, the system being of chief advantage to members of the building trades. Cooperation with trade unions is the more frequent and more satisfactory system; the unions have rendered valuable service in preventing fraud, because of their intimate relations with the workers and the conditions of work. Under both systems insurance is given only to those able and willing to work; those on strike and those discharged through obvious faults of their own are not eligible to benefit. Since 1902 an active propaganda for a system of Imperial unemployment insurance has been carried on; two official investigations have been made. The most serious obstacle is the lack of exact statistical information of the amount of employment in different industries. There is also the question whether workmen on strike should receive unemployed benefit when their strike is not justified.

In Bavaria where the agitation for a state system was strongest a government committee reported in favor of the "Ghent Scheme," by which subventions are granted by cities to existing trade unions. This proposal was supported by the trade unionists although some objected on the ground that the effect of subsidies would be to make the unions mere friendly societies, giving their greatest attention to making the best of existing conditions instead of actively fighting for better ones. Representatives of cities objected on account of the expense and because country people would move to the city to get the benefit. A system was finally adopted providing that the larger cities should set aside two separate and independent funds. One of these is to aid trade unions which already have unemployment insurance; the other is to aid other unions and unorganized labor. The state is to repay a certain proportion of the cities' outlay. Rules were drawn to prevent migration to the city.

FRANCE. The International Conference on Unemployment met at the Sorbonne in Paris, September 18-21, arrangements having been made at a preliminary meeting at Paris, July, 1909. The object of the Conference was to investigate scientifically the causes of unemployment with a view to organizing means for conserving human resources. Twenty-one nations were represented. The delegation from the United States included Commissioner of Labor Charles P. Neill, Professor E. T. Devine, Professor Henry W. Farnam, Mr. Lee K. Frankel, Professor J. J. Andrews, and Mr. W. M. Leiserson. The delegates repre-

sented the interests of labor, of employers, and of the public. The topics most extensively discussed were statistics of unemployment, unemployment insurance, and how to increase the efficiency of labor exchanges (q. v.). Detailed reports of German and Belgian experience were given. Lively discussion was aroused by the efforts of some socialist and single-tax advocates to enforce the view that proposed methods of relieving the intensity of the evils of unemployment were only makeshifts and that the problem demands the more radical treatment of change in social policy or organization. A plan for permanent organization was adopted. This involves the formation of sections in the countries interested. The American section will be organized by the American Association for Labor Legislation.

**UNION CENTRAL LIFE INSURANCE SOCIETY.** See INSURANCE.

**UNIONISTS.** See GREAT BRITAIN, *History*.

**UNITARIANS.** A religious denomination, the distinctive feature of which is the acceptance and adoption of the principles of freedom and progress in religion. The American Unitarian Association is the administrative body of the church, with headquarters in Boston. No official statistics are gathered of the membership of the denomination, but in 1910 it was approximately as follows: Communicants, 71,129; churches, 504, and ministers, 538. There are a large number of conferences, unions, alliances, and leagues, organized for the purpose of distributing Unitarian literature and propagating Unitarian thought throughout the world. In Great Britain there are some 375 ministers and 372 congregations. Divinity schools are maintained at Cambridge, Mass., Meadville, Pa., and Berkeley, Cal. Active missionary work is carried on at many points among the Icelandic, Norwegian and Swedish emigrants in the United States. Field secretaries are employed in New England, New York, Canada and on the Pacific Coast. Among the Unitarian periodicals are the *Christian Register*, published in Boston, the *Unitarian Defense*, published in New York, and the *Pacific Unitarian*, published in San Francisco. The president of the American Unitarian Association is Rev. Samuel A. Eliot, D. D., and the secretary is Rev. Lewis G. Wilson.

**UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.** A religious denomination, formed in Pittsburg, Pa., in 1858 by a union of Associate and Associate Reformed churches. According to the religious census made by the United States government in 1906 and published in 1910, there were in the denomination in 1906, 130,342 communicants with 984 churches and 994 ministers. According to statistics gathered by the denomination itself, there were in 1910, 167,885 communicants, of whom 32,680 were in the foreign missionary fields. There were 1143 ministers and 1104 churches. In the 1426 Sabbath schools there were 149,595 scholars and 14,787 officers and teachers. There were 972 Young People's Societies with a membership of 32,589. The total contributions for all purposes for the year amounted to \$2,481,652. Of this amount, \$783,781 was for salaries of ministers, \$881,868 for congregational purposes, \$554,818 for the boards of the church and \$207,150 for general purposes. The average contribution per member was \$18.09. The denomination sustains six colleges in the

United States, one at Assiut, Egypt, and one in the Punjab, India. There are theological seminaries at Allegheny, Pa., Xenia, O. The property value of these institutions is \$900,000. Missions are carried on in Egypt, India and the Sudan. There are missions also among the mountaineers of Tennessee and Kentucky, among the negroes in Virginia, Tennessee, Alabama and Mississippi, and among the American Indians in the Oregon and Idaho reservations. The leading papers of the denomination are the *United Presbyterian* and the *Christian Instructor*, and there are several other periodicals for Sabbath schools and young people issued from the Publishing House in Pittsburg, Pa. The church is a member of the World's Alliance of Presbyterian and Reformed Churches, the Council of the Reformed Churches in America and the Federation of Evangelical Churches in America. The General Assembly meets annually in May.

**UNITED STATES.** The total area belonging to or under the jurisdiction of the United States is estimated by the United States Coast and Geodetic Survey at 3,743,344 square miles, divided as follows: United States, 3,026,789; Alaska, 590,884; Philippine Islands, 115,026; Hawaiian Islands, 6449; Porto Rico, 3435; Panama Canal Zone, 474; Guam, 210; Tutuila Group, Samoa, 77.

**POPULATION.** The population of the United States according to the Thirteenth Census made in 1910, including all non-contiguous territories, with the exception of the Philippines, Guam and Tutuila, in which the census was not taken, will be found in detail in the article which follows, **UNITED STATES CENSUS**. That article gives the total population, population by States and such other information as was available at the end of the year.

**AGRICULTURE.** The statistics relating to agriculture and agricultural products will be found in the article **AGRICULTURE** and under the respective headings of the various products. The agricultural production of the separate States and the non-contiguous territories will be found under their respective headings.

**INDUSTRIES.** For a general discussion of the various industries, see the articles dealing with these industries, as **IRON AND STEEL**, **COTTON**, **SUGAR**, **RAILWAYS**, **SHIPBUILDING**, **TEXTILE MANUFACTURES**, **BOOTS AND SHOES**, etc. For matters relating to carrying on of industries, see **TRADE UNIONS**, **TAXATION**, **TRUSTS**, **STRIKES** and **LOCKOUTS**, etc.

#### FOREIGN COMMERCE

The foreign commerce of the United States in the calendar year 1910, amounted to \$3,427,415,895, compared with \$3,203,719,369 in 1909. The relative value of the imports and exports and the trade with leading countries are shown in the table on page 739. These figures show a slight increase in the exports to Europe, a marked gain in those to North and South America, an increased total to Asia and Oceania in combination, and a slight gain in the exports to Africa. To Europe the exports during the calendar year 1910 were in round numbers \$1,193,000,000, against \$1,170,000,000 in 1909; to North America, \$426,000,000 against \$345,000,000 in the preceding year; to South America, \$100,000,000 against \$83,000,000 in the preceding year; to Asia and Oceania combined, \$124,-

000,000 against \$113,000,000 in the preceding year; and to Africa, \$21,000,000 against \$17,000,000 in the preceding year.

On the import side the figures also indicate a gain for each of the grand divisions except South America. From Europe the imports were \$790,000,000, against \$767,000,000 in 1909; from North America, \$324,000,000, against \$278,000,000 in 1909; from South America, \$189,000,000, against \$193,000,000 in 1909; from Asia and Oceania, \$240,000,000, against \$223,000,000 in 1909; and from Africa, \$19,000,000, against \$18,000,000 in 1909.

One specially interesting feature of the figures is the fact that the exports to South America for the first time crossed the \$100,000,000 line, and are practically two and one-half times those of a decade ago, being, for 1910, \$100,303,616, and for 1900, \$41,248,051. To North America the exports have more than doubled in the decade, the figures for 1910 being \$425,576,553, against \$198,788,019 in 1900. To Europe the increase in exports is very slight, the figures for 1910 being \$1,192,095,728, against \$1,116,399,524 in 1900. To Asia and Oceania the growth is also comparatively small, the figures for 1910 being \$124,859,916, against \$98,531,349 in 1900.

On the import side the gain from Europe is larger, the total imports in 1910 being \$790,154,694, against \$441,610,461 in 1900. From North America the imports in 1910 aggregated \$324,212,684, against \$130,361,453 in 1900; from South America \$189,466,428, against \$102,706,633; and from Asia and Oceania combined, \$239,732,090, against \$143,445,861 in 1900.

The table at the top of page 739 shows the trade with the principal countries during the calendar year, 1910, compared with 1909.

As will be seen from the table on pages 739-740, the foreign commerce of the United States in the fiscal year amounted to \$3,302,804,708, of which imports were \$1,557,819,988; exports, \$1,744,984,720; excess of exports over imports, \$187,164,732. The imports were larger than in any preceding year, and the exports larger than in any former years except 1907 and 1908. The grand total of foreign commerce, including in this term all merchandise imported and exported except that included in the trade with the noncontiguous territories of the United States (Porto Rico, Hawaii, Guam, Tutuila, and Alaska) amounted to \$3,302,821,057 and is greater than that of any preceding year except 1907, when the total was \$3,315,272,503.

The excess of exports over imports in the fiscal year, 1910, is smaller than in any other year since 1896, being \$187,111,349, against \$351,090,880 in the fiscal year 1909, \$666,431,554 in 1908, \$446,429,653 in 1907, \$517,302,054 in 1906, and \$401,048,595 in 1905. This marked reduction in the excess of exports over imports is due to a falling off in the exportation of foodstuffs and an increase in the importation of manufacturers' materials.

The increasing share of the manufacturers of the country in its foreign trade is illustrated by the detailed statement regarding the imports and exports by great groups during the fiscal year 1910. These figures show increased importations of manufacturers' materials, increased exportations of manufactures, and a decline in both imports and exports of foodstuffs. The value of imported manufacturers' materials, including in this term both crude and partly manufactured, amounted to \$856,000,000 in the

TABLE OF COMMERCE FOR CALENDAR YEARS 1909 AND 1910.

Total .....	1,475,520,724	1,562,924,251	1,728,198,645	1,864,491,644

fiscal year, against \$673,000,000 in 1909. The exports of manufactures, including both those ready for consumption and those for further use in manufacturing, aggregated \$768,000,000 in the fiscal year 1910, against \$671,000,000 in 1909. Thus imports of manufacturers' materials in 1910 were larger than ever before and were 109 per cent. greater than a decade ago and 198 per cent. greater than two decades ago. Manufactures exported in 1910 show also a larger total than ever before and were 58 per cent. greater than in 1900 and 329 per cent. greater than in 1890.

The falling off in the exports of foodstuffs, due to larger home consumption, is again illus-

trated in the figures of 1910, which show the total value of foodstuffs exported as but \$369,000,000, against \$438,000,000 in 1909 and \$545,000,000 in 1900, a decline of 32 per cent. in 1910 when compared with 1900, despite the fact that prices and therefore export valuations were in 1910 higher than those of 1900. Measured by quantities the wheat exports of 1910 were 46,666,000 bushels, against 102,000,000 in 1900; flour, 9,000,000 barrels against 18,666,000 in 1900; and corn, 36,800,000 bushels, against 209,000,000 in 1900.

The tables on page 741 give the chief articles of import and export, with their values in the fiscal years 1909 and 1910.

**TRADE WITH NONCONTIGUOUS TERRITORIES.** Trade of the United States with its noncontiguous territories aggregated two hundred million dollars in the calendar year 1910 against one hundred million in the calendar year 1903, the first year for which complete statistics of this trade are available. The figures of the Bureau of Statistics, Department of Commerce and Labor, just completed, show the total value of this trade in the year ending December 31, 1910, to be \$202,494,343, and in the year ending December 31, 1903, \$100,107,234, an increase of 100 per cent, while the trade with other parts of the world was increasing about 40 per cent. The territories in question are Alaska, Hawaii,

Porto Rico, the Philippines, Guam, Tutuila and the Midway Islands.

The value of the merchandise shipped from the territories in question to the United States in 1910 was \$111,731,031, against \$61,876,756 in 1903. The value of the merchandise shipped from the United States to the noncontiguous territories was \$90,763,312, against \$38,230,478 in 1903. The increase in the period from 1903 to 1910 was thus 82 per cent. in the value of merchandise shipped from the territories in question to the United States; and 139 per cent. in the value of merchandise shipped from the United States to those territories.

CHIEF ARTICLES OF IMPORT AND EXPORT WITH  
THEIR VALUES IN THE FISCAL YEARS  
1909 AND 1910:

Articles	Imports

\* Includes linters. † Not including corn oil cake.

The figures for the trade of the United States with its non-contiguous territories do not include movements of gold and silver. The value of domestic gold shipped from Alaska to the United States in 1910 was in round terms \$15,000,000, and of foreign gold (presumably from British territory adjacent to Alaska) approximately \$3,500,000; while the value of domestic gold shipped from Hawaii to the United States in 1910 was about \$500,000.

The principal articles forming this trade of more than \$200,000,000 between the United States and its noncontiguous territories are in general terms tropical products sent from those islands to the United States, and fish, copper, and furs from Alaska, while of shipments from the United States to these territories manufactures and foodstuffs are the principal articles. Sugar and hemp are the principal articles coming from the Philippines, and, as already indicated, fish, copper, and furs are the principal articles coming from Alaska. The quantity of sugar sent from Hawaii to the United States in the calendar year 1910 was a little over 1,000,000 pounds, valued at \$39,500,000; from Porto Rico 626,000,000 pounds, valued at \$26,000,000; and from the Philippines 218,000,000 pounds, valued at \$6,500,000. Tobacco is also an article of some importance in the shipments of merchandise from the tropical islands to the United States, amounting to \$1,500,000 of unmanufactured tobacco and a little less than \$5,000,000 in value of cigars from Porto Rico; a little less than \$2,000,000 worth of cigars, cigarettes and cheroots from the Philippines, and about \$9000 worth of tobacco from Hawaiian Islands. Manilla hemp from the Philippines in 1910 amounted to about \$8,666,000 in value. Fruits and nuts (chiefly fruits) from Hawaii amounted to \$2,500,000 in value; from Porto Rico a little less than \$2,000,000; and from the Philippines the shipments under this general head (chiefly cocoanut meat, broken, or "copra") amounted to a little over \$500,000.

IMPORTS AND CUSTOMS RECEIPTS DURING FIRST YEAR UNDER THE NEW TARIFF. The record of the first full year under the new tariff law, so far as relates to total importations and customs collections, is given in a special statement compiled by the Bureau of Statistics of the Department of Commerce and Labor. The figures cover the imports of the 12 months, August 1, 1909, to July 31, 1910, and thus include five days under the Dingley tariff, since the present law went into effect on the morning of August 6th. The statement shows total imports during the 12 months in question, \$1,562,621,181, of which \$768,047,231, or 49.15 per cent, entered free of duty. The importations during the year were larger than in any corresponding period in the history of the import trade and the value of those entering free of duty, the largest ever shown in any corresponding year, while the percentage which free merchandise formed of the total imports was larger than in any corresponding year except 1897, the last year of the Wilson tariff, when large quantities of merchandise then on the free list were being imported in anticipation of a change in the tariff law; the years 1892, 1893, and 1894, under the McKinley tariff, when sugar was admitted free of duty; and the year ending September 30, 1841.

The customs receipts during the 12 months, August 1, 1909, to July 31, 1910, were \$327,873,672, a larger total than in any corresponding year except 1907, when the total was \$335,889,830. A comparison of the imports and customs receipts during the period in question shows an average ad valorem rate of duty on all imports of 20.98 per cent. and on dutiable imports, of 41.26 per cent. The average ad valorem rate on all imports is lower than in any corresponding period during the last 20 years except the second year of the Wilson tariff, when the average was

20.77 per cent. and the closing year of the McKinley tariff, when the average was 19.11 per cent. The average ad valorem rate on dutiable imports is lower than in any corresponding period of the last 20 years, except 1896, when the average was 39.48 per cent., and 1895, when the average was 41.18 per cent., both these years being under the Wilson law.

A comparison of the record of the Payne law, during the entire period of its operation for which figures are available, with that of the McKinley, Dingley, and Wilson laws, respectively, shows the per cent. of the total imports free of duty, as follows: under the Payne law, 49.15; under the Dingley law, 44.31; under the Wilson law, 48.82; and under the McKinley law, 53.04. The monthly average of customs receipts under the respective tariffs were: Payne law, \$27,322,806; Dingley law, \$21,676,085; Wilson law, \$13,857,938; and McKinley law, \$14,571,240. The average ad valorem rate of duty on total imports was, under the Payne law, 20.98 per cent.; Dingley law, 25.48 per cent.; Wilson law, 21.92 per cent.; and McKinley law, 22.12 per cent. Average ad valorem rate on dutiable imports, under the Payne law, 41.26 per cent.; Dingley law, 45.76 per cent.; Wilson law, 42.82 per cent.; and under the McKinley law, 47.10 per cent.

#### INTERNAL COMMERCE

**LIVESTOCK AND GRAIN MOVEMENTS.** Commercial movements of livestock during 1910, as measured by the receipts of livestock at seven primary interior markets, were characterized by a shortage in the commercial supply of hogs. The total annual receipts of these animals, 15,685,435 head, being the lowest for any year since 1896 and falling 20 per cent. short of the average of the preceding five-year period. The receipts of cattle at these markets, 9,265,412 head, was slightly larger than during 1909, though below the average for the preceding five-year period. The receipts of sheep, 12,406,767 head, showed a record total, being about 20 per cent. in excess of the average for the preceding five years. The receipts of horses and mules, 368,252 in number, though larger than for the preceding two years, showed a diminution as compared with the figures for the earlier years.

The number of loaded livestock cars received at the seven markets during 1910 was 690,423 as compared with 708,210 cars in 1909 and 740,257 cars in 1908. The total receipts of cattle during 1910 was slightly in excess of those reported in 1909. Kansas City, St. Louis and St. Joseph showed smaller totals than for the preceding year. Receipts of meat animals at the four leading Atlantic seaport cities amounted to 8,240,317 head as compared with 9,220,901 and 9,865,980, in 1909 and 1908 respectively. Shipment of packing-house products from Chicago in 1910 totaled 1,998,246,875 pounds, a decrease of 20 per cent. compared with the average for the preceding five-year period.

The grain receipts for the calendar year at fifteen leading primary markets totaled 814,167,454 bushels, a total in excess of those reported in the two years previous. The aggregate was made up of 264,588,917 bushels of wheat; 243,098,001 bushels of corn; 218,141,254 bushels of oats; 80,916,056 bushels of barley; and 7,423,226 bushels of rye. As compared with 1909 all

classes of grain showed a gain except rye. Flour shipments at twelve leading milling centres, 41,938,888 barrels, fell below those reported in 1909.

**LUMBER MOVEMENTS.** The more important lumber movements during 1910 as reported to the Bureau of Statistics, Department of Commerce and Labor, indicate a more or less stationary condition of the trade caused in part by a similar condition of the building trades, especially in the larger cities of the East. Coastwise receipts for the year of Southern pine at New York City were 459,535,000 feet. This was below the receipts for 1909 which were 486,661,000 feet. Rail shipments reported by the Northern Pine Manufacturers' Association from the territory in the Mississippi and Wisconsin valleys were 1,186,040,000 feet, which differs but slightly from the total quantity reported during 1908-9. Since 1906 there has been a decrease in the rail shipments of about 35 per cent. Shipments of Southern pine were slightly larger than in 1909.

**COAL MOVEMENTS** The anthracite coal shipments from Eastern producing territory in 1910 amounting to 64,905,762 long tons, exceeded those of the two years previous. This total was exceeded only once, in 1907, the year following the great anthracite strike. About one-fourth of the total shipped was handled in and around New York for shipment to New York proper and other Atlantic ports.

The bituminous movement in the East as reported by nine leading coal-carrying roads was 121,460,415 short tons, or 15 per cent. in excess of the 1909 total. The coastwise shipment of soft coal from the five principal Atlantic ports amounted to 26,121,224 long tons, an increase of about 2,000,000 long tons over 1909 and exceeding the shipment even of 1907. For further information regarding the production of coal and coke see these articles.

**LAKE COMMERCE.** The volume of lake commerce as measured by the quantity of merchandise shipped between domestic Lake ports attained during 1910 a record total of 86,732,316 short tons, compared with 80,974,605 short tons in 1909 and 83,506,991 short tons in 1907, the largest previous annual total recorded by the Bureau of Statistics. Of the total domestic lake shipments, 41,517,641 long tons, or 54 per cent., were made up of iron ore of which the greater number is to be credited to Lake Superior ports. The Lake shipments of soft coal during 1910 amounted to 18,406,469 short tons, an increase of 35 per cent. over the corresponding figures of 1909. Lumber shipments by Lake were 1,207,792,000 feet, a small increase over the total for 1909. Grain and flaxseed shipments were 117,275,310 bushels, as compared with 128,087,192 bushels in 1909.

The vessel movement of 1910 in the domestic Lake trade as measured by the outward bound vessel tonnage established a new record of 110,292,481 net tons register, compared with 103,271,885 net tons for 1909. The total number of departures, 75,941 was larger than in the three previous years. The average size of Lake vessels engaged in domestic trade was 1452 net tons register. The largest outbound vessel tonnage is credited to Duluth, 10,429,102 net tons register. Chicago, Superior and Milwaukee each showed about 8,000,000 net tons.

**RIVER AND CANAL TRAFFIC.** Data relating to transportation on the rivers and canals of the

country are incomplete. This applies particularly to the commerce of Mississippi River points for which no separate data can be given. Reports of vessel movements at Cairo, Ill., at the confluence of the Ohio and Mississippi rivers, showed a diminution of traffic at that point in 1910; 5875 vessels of 3,202,910 net tons are reported at that point, indicating a decrease of 22 per cent. in the number of vessels and 27 per cent. in the vessel tonnage reported as compared with the average figures for the preceding five-year period. The Erie Canal tonnage of 2,023,185 short tons also showed a slight decrease from the figures of 1909 and the same is true of the traffic carried on all New York State canals, the total, 3,073,412 short tons, being the lowest for the decade, except for the year 1908.

**EDUCATION.** See EDUCATION IN THE UNITED STATES.

**COINAGE.** The following table indicates the amount and character of the coinage as used in the United States in the calendar years 1909 and 1910.

**COINAGE EXECUTED AT THE MINTS OF THE UNITED STATES DURING THE YEARS 1909 AND 1910.**

Postal expenditures .....	203,562,383.07	224,128,657.62
Total, incl. postal .....	1,002,303,040.25	950,795,417.57
Deficit .....	118,795,919.63	19,480,752.43

The receipts and disbursements for the fiscal year ending June 30, 1911, are estimated by the Secretary of the Treasury in his annual report as follows:

**RECEIPTS**

Customs .....	\$320,000,000
Internal revenue .....	283,000,000
Corporation tax .....	25,000,000
Miscellaneous .....	50,000,000
Total ordinary receipts .....	678,000,000

**DISBURSEMENTS**

Civil establishment .....	174,000,000
Postal deficiency .....	169,000,000
War Department .....	125,000,000
Navy Department .....	16,000,000
Indian service .....	156,000,000
Pensions .....	22,195,000
Interest on the public debt .....	
Total ordinary disbursements .....	662,198,000
Surplus for 1911 in ordinary receipts of... ..	15,805,000
Panama Canal disbursements .....	45,000,000
Miscellaneous redemptions of the public debt .....	400,000
Total estimated deficit of .....	\$ 29,595,000

The following table shows the general stock of money in the United States at the end of the calendar year 1910, and the money in circulation at the end of that year:

	General Stock of Money in the United States Dec. 31, 1910	Held in Treas- ury as Assets of the Gov- ernment Dec. 31, 1910	MONEY IN CIRCULATION	
			Dec. 31, 1910	Dec. 31, 1909
Gold coin including bullion in Treasury .....	\$1,708,828,297	\$180,322,541	605,650,087	\$606,212,413
†Gold certificates .....	73,681,030	73,681,030	849,174,639	789,907,069
Standard silver dollars .....	564,805,508	3,440,089	75,794,419	74,763,075
†Silver certificates .....		11,237,501	474,333,499	474,339,458
Subsidiary silver .....	**157,884,083	15,401,350	142,462,703	146,968,588
Treasury notes of 1890 .....	3,472,000	10,507	3,461,498	3,933,338
United States notes .....	346,681,016	9,263,762	237,412,254	238,666,283
National Bank notes .....	727,705,981	23,614,689	704,091,292	687,113,834
Total .....	\$3,509,356,855	\$316,976,469	\$3,192,380,386	\$3,122,154,538

Population of the United States December 31, 1910, estimated at 93,203,000; circulation per capita, \$34.25. (See Note.)

\* A revised estimate by the Director of the Mint of the stock of gold coin was adopted in the statement of August 1, 1907. There was a reduction of \$135,000,000.

\*\* A revised estimate by the Director of the Mint of the stock of subsidiary silver coin was adopted in the statement of September 1, 1910. There was a reduction of \$9,700,000.

† For redemption of outstanding certificates an exact equivalent in amount of the appropriate kinds of money is held in the Treasury, and is not included in the account of money held as assets by the government.

‡ This statement of money held in the Treasury as assets of the Government does not include deposits of public money in National Bank depositaries to the credit of the Treasurer of the United States, amounting to \$35,542,254.92.

Note.—The figures representing the population of the United States during the past ten years have been estimated upon the basis of the census of 1900. The figures for this statement are estimated upon the basis of the census of 1910, representing the population of continental United States.

**NATIONAL DEBT.** The amount and classification of the United States national debt at the end of the calendar years 1908, 1909 and 1910, were as follows:

	Dec. 31, 1908	Dec. 31, 1909	Dec. 31, 1910
Interest-bearing debt at from 2 to 4 per cent. and re- deemable from 1907 to 1925 inclusive .....	\$ 912,900,850.00	\$ 913,317,490.00	\$ 913,317,490.00
Debt on which interest has ceased since maturity .....	3,448,935.26	2,365,725.26	1,995,045.26
Debt bearing no interest .....	400,501,382.78	380,637,483.78	387,919,402.43
Gross debt .....	\$1,316,851,168.04	\$1,296,220,699.04	\$1,303,231,937.69
Cash balance .....	169,501,417.34	84,048,865.69	89,393,472.14
Net debt .....	\$1,147,349,750.70	\$1,212,171,833.35	\$1,213,838,465.55

### ARMY

**STRENGTH.** The actual strength of the regular army on October 15, 1910, was 4310 officers and 67,459 enlisted men or a total of 71,769. As compared with a strength reported on the same date, 1909, this shows an increase of 101 officers and a decrease of 4381 enlisted men, making a net decrease in the regular army during the year of 4280. These figures do not include 3486 men of the hospital corps. There are also in the service 166 officers and 5100 enlisted men of the Philippine scouts. This is an increase of nine officers and a decrease of 472 enlisted men during the year. During the year four more companies of Philippine scouts were given a battalion organization, making a total of 12 battalions. The following table gives the distribution among the different branches of the service on October 15, 1910:

Branches of service	Officers	Enlisted men	Total
General officers .....	21		21
Staff corps and department .....	924	62,316	3,240
Engineers .....	186	1,817	2,003
Cavalry .....	760	11,003	11,763
Field artillery .....	232	4,807	5,039
Coast artillery corps .....	667	17,930	18,597
Infantry .....	1,520	23,666	25,186
Miscellaneous .....		5,920	5,920
Total regular army .....	64,310	667,459	71,769
Philippine scouts .....	166	5,100	5,266
Aggregate .....	64,476	672,559	77,035

a Including 197 lieutenants of the medical reserve corps on active duty.

b Not including 3,286 enlisted men of the hospital corps.

The table below gives the geographical distribution on the same date, including the Philippine scouts, but not including the hospital corps:

Geographical distribution	Officers	Enlisted men	Total
In the United States .....	3,366	53,595	56,961
In Alaska .....	50	1,078	1,128
In the Philippines .....			
Regular army .....	719	10,243	10,962
Philippine scouts .....	166	5,100	5,266
In Porto Rico .....	29	575	604
In Hawaii .....	72	1,299	1,371
Troops en route and officers at other foreign stations .....	74	669	743
Total .....	4,476	72,559	77,035

**OFFICERS.** On June 30, 1910, there were 4273 commanding officers on the active list of the regular army. Of these, 1167, including 65 chaplains, were general officers or officers of the staff corps and departments, and 3106 belonging to the line.

During the year 311 second-lieutenants were added to the army, 183 having been appointed from the Military Academy, 26 from the enlisted men of the army and 102 from civil life. On July 1, 1910, there were 25 vacancies in the line of the army, one in the Coast Artillery Corps and 24 in the Infantry.

Eighty officers were retired during the fiscal year and the total number of the retired list on June 30, 1910, was 1015. Of those retired, 49 were retired for disability, 15 on their own application, 14 by operation of law, having reached the age limit, and two after a second failure to pass the professional examination. Of the re-

tired officers, 89 were under assignment to special duty during the year. Some of these were instructors of educational institutions, others were detailed with the State militia, while still others were on recruiting service.

**ENLISTED MEN.** The total number of enlistments in the army during the fiscal year, exclusive of the hospital corps and Philippine scouts, was 17,973, of whom 7268 were re-enlistments and 10,705 were original enlistments. The percentage of native-born white and colored among the original enlistments was 88. In making these enlistments the recruiting officers examined 100,966 men, of whom 81,878, or about 81 per cent. of the whole number, were rejected as lacking in either mental, moral or physical qualifications.

Desertions from the army, which form one of its most serious problems, were considerably less in 1910 than in the preceding year. They numbered, however, 3464, or a percentage of 3.66 against 4.97 in 1909. The Secretary of War has adopted a system which consists of prompt and vigorous pursuit of the deserter by means practically certain to result in his apprehension and subsequent punishment as a military convict under the hard and rigorous conditions of prison discipline. The decrease in the number of desertions in 1910 may be attributed to this system of apprehending and punishing deserters.

**LOSSES.** During the year the army lost 148 officers and 23,836 enlisted men. Of the officers, 17 were killed in action or died of their wounds, diseases, etc.; 46 resigned or were discharged, 5 were dismissed, and 80 retired. Of the men 11,911 were discharged upon expiration of term of service, 3464 deserted, 320 were killed in action or died of wounds, diseases, etc., 305 retired, and the remainder were discharged for disability or by general court-martial or by order.

**HEALTH AND MORTALITY.** The number of deaths in the enlisted strength from all causes in 1910 was 370, of which 228 were from disease and 142 from injury, six of the latter being killed by hostile Moros in action or while on sentry duty. The principal causes of death from disease were tuberculosis, 43; organic disease of the heart, 36; pneumonia, 32; typhoid fever, 19. Fifty-one deaths occurred from gunshot wounds, 28 from drowning and 11 from acute poisoning. There were 33 suicides and 15 homicides. The deaths among the officers during the year numbered 18, and 49 were retired on account of disability. The diseases causing the greatest number of retirements were organic disease of the heart, and neurasthenia. Of the 659 officers of field rank who were subject to the annual physical test, 38 were excused. Among the Philippine scouts 28 were killed in action, or died of wounds, disease, etc. The principal causes of death were beriberi and cholera. Hookworm disease has been found in a considerable portion of southern-bred recruits. Out of a total of 695 recorded examinations, nearly 37 per cent. have been found infected. The eastern half of Kentucky furnished the greater number. The infection exists also in the Philippine Islands. A campaign against the disease has been carried on with energy and success in the Philippines and on a far larger scale than has been done anywhere else.

**MILITARY TOURNAMENTS.** Troops of the regular army participated in military tournaments during the year at Toledo, O.; Dallas, Texas; Des Moines, Ia.; Albany, N. Y.; Nashville,

Tenn.; Chicago, Ill., and Tacoma, Washington. The attendance at the Chicago tournament was unusually large, over a million people having attended. These tournaments comprised, among other things, reviews of troops, competitive and exhibition drills of different arms of the service, tests in wall scaling, building and demolishing bridges and exhibitions in packing.

**IMPROVED EQUIPMENT.** A detailed account of the improved equipment for the United States troops will be found described in the article **MILITARY PROGRESS.** The development of military aeronautics is also noted in the same article.

**PANAMA CANAL DEFENSES.** In accordance with the recommendation of the National Coast Defense Board, the 61st Congress was asked to include in the estimates for the fiscal year \$19,546,843 for the fortification of the termini of the Canal, including the construction of posts for the permanent garrison, and of this amount to appropriate and make immediately available \$7,000,000 toward the execution of the project of fortification. Indications at the close of the year were that this provision would be made.

**BROWNSVILLE INCIDENT.** The long-drawn out Brownsville incident, arising from the discharge of certain members of the 25th battalion of colored soldiers for alleged assault upon citizens of Brownsville, Texas, in 1906, was finally terminated by the report of the military court of inquiry which, on April 6, confirmed the guilt of the soldiers of the 25th infantry. Captain Samuel P. Lyon, who was in command of Company D of the 25th infantry, was tried by court-martial from June 20 to July 5, 1910, and was acquitted of all blame. This followed similar action in the case of two other officers who were in command of colored troops at that time.

## NAVY

**NAVAL STRENGTH.** The strength of the navy in 1910 is shown in the articles **BATTLESHIPS** and **NAVAL PROGRESS.**

**ORGANIZATION.** The plan of the present organization of the Navy Department aims to place at the disposition of the Secretary of the Navy expert knowledge and information in order that he may keep in touch with matters over which he has charge. It went into effect late in 1909. Its essential feature is the grouping of different bureaus of the department into divisions and the appointment of four aids, who are to keep informed as to the work of each division and supply the Secretary with necessary expert advice on the duties coming under these divisions. The aids are the following: Aid for operation, Rear-Admiral Wainwright; aid for material, Captain Fletcher; aid for inspection, Rear-Admiral Ward; aid for personnel, Rear-Admiral Potter. Rear-Admiral Wainwright worked out during the year a reorganization of the battleship fleet and the torpedo vessels, which has brought about markedly greater efficiency. The other aids have performed much useful service also in connection with their duties.

**NAVY YARDS.** During the year the Secretary of the Navy inspected all the continental navy yards both on the Atlantic and on the Pacific coasts and the naval station at Guantanamo, Cuba. In his annual report he declares that the present organization at navy yards has made for economy and efficiency and that a steady im-

provement has been made and may be expected to continue in these respects.

**ECONOMY IN ADMINISTRATION.** The Navy Department estimates for the expenses of the naval establishment for the fiscal year 1911, showed a saving of about \$5,000,000 as compared with the amount appropriated in 1910. One of the largest expenditures of government funds in the Navy Department of the past has been due to repairs made upon vessels of little or no military value when the repairs were completed. During the past year these repairs have been kept down to a minimum and some vessels have been struck from the navy list and disposed of.

**CRUISING FLEETS.** The Atlantic Fleet under the command of Rear-Admiral Seaton Schroeder, spent the year in such exercises and cruising as seemed best calculated to keep it in efficient condition, including cruising in the West Indies during the winter. The Pacific Fleet, under the command of Rear-Admiral Giles B. Harber, in addition to the usual drills and exercises during the year, made a cruise to Honolulu, Manila, China and Japan and returned to the West coast of the United States. For strategic and administrative reasons the department re-established in 1910 the Asiatic Fleet, and the ships employed in Asiatic waters and formerly forming a part of the Pacific Fleet were constituted as a separate fleet under the command of Rear-Admiral John Hubbard as commander-in-chief. These vessels continued their service in protecting American interests in the Orient.

In response to an invitation from the president of Argentina, a special service squadron consisting of the armored cruisers *Tennessee*, *Montana*, *North Carolina* and *South Dakota* and the scout cruiser, *Chester* was organized under the command of Rear-Admiral Sidney A. Staunton as commander-in-chief, and attended the ceremonies in that country in connection with the centennial celebration of independence.

A number of smaller vessels were actively employed during the year in protecting the American interests in tropical American waters, especially on both coasts of Nicaragua. In connection with this service a force of marines was embarked on board the *Buffalo* and held at Corinto ready to land should circumstances require it. To protect American interests in Greytown and Bluefields during the Nicaraguan revolution the naval officers notified both parties that hostilities would not be allowed to take place in either city and men of the navy and marines were landed at Bluefields in June to insure compliance with this order.

A new organization of the torpedo vessels of the navy including submarines was put into effect during the year with marked benefit to the service. This groups all such vessels in commission in the Atlantic into the Atlantic Torpedo Fleet under the command of a single officer experienced in this class of work. The Pacific and Asiatic Torpedo Fleets have been similarly constituted in those waters.

On account of serious troubles with the natives in Liberia, the department kept vessels on the Liberian coast during the year to protect American interests and carry out obligations imposed upon the United States by its treaty with Liberia.

**AVIATION.** Important developments in naval aviation will be found discussed in the article **NAVAL PROGRESS.**

## POST OFFICE

The receipts of the Post Office Department for the fiscal year ending June 30, 1910, amounted to \$224,128,657 and the expenditures to \$229,977,244. The total excess of expenditures over receipts was \$5,848,586. This is the smallest deficit from postal operations shown for many years. The fiscal year 1909 showed a deficit of \$17,500,000. Thus in the space of twelve months a reduction of \$11,500,000 was shown in the amount of the annual difference between expenditures and receipts. This reduction is remarkable as being several times larger than any reduction accomplished in a previous year. It was made also without any curtailment of postal facilities; on the contrary, the service was largely extended during the year. The policy of the postal administration has been to wipe out losses by increasing the postal business along profitable lines and, while thus enlarging the department's income, reduce as far as possible the rate of expenditure by cutting out wasteful processes, by simplifying and rendering more effective the methods of handling mail and by raising to the highest possible standard of efficiency the officers and employees. The principal receipts were from the following sources: Sales of stamps, stamped envelopes, etc., \$202,064,887; second-class postage, \$8,174,281; third and fourth class postage, \$4,418,428; revenue from money order business, \$4,046,932. The largest expenditure was for the transportation of mails on railroads, \$44,654,515. The expenses of rural delivery were \$36,844,968 and for city delivery, \$31,683,639.

**SECOND-CLASS MAIL.** The most serious problem in the administration of the Post Office Department is that of the transportation of second-class mail. The Postmaster-General declares that the government sustains an enormous loss in the handling and transportation of this class of mail matter, and owing to the rapid increase in the volume of such mail the loss is constantly growing. Recommendations for an increase in the charge for transporting second-class mail, especially magazines and other periodicals, which he suggested in his annual report for 1909, raised a great deal of criticism which was carried on during 1910. These recommendations do not include an increase in the postage on reading matter in magazines or periodicals. Such an increase, Mr. Hitchcock says, would place a special burden on a large number of second-class publications, including educational and religious periodicals that derive little or no profit from advertising. For these publications and also for any other legitimate reading matter in periodical form, the department favors the continuation of the present low postage rate of one cent a pound and recommends that the proposed increase in rate be applied only to magazine advertising matter. This plan, he declares, would be in full accord with the statute governing second class mail, a law that never justified the inclusion under the second-class rates of the vast amount of advertising now transported by the government at a tremendous loss. Newspapers are not included in the plan for a higher rate on advertising matter because, being chiefly of local distribution, they do not burden the mails to any such extent as the widely circulating magazines. Mr. Hitchcock affirms that if the magazines could be required to pay what it costs the government to carry their advertising pages, the department's rev-

venues would eventually grow large enough to warrant one cent postage on first class mail.

The claims of Mr. Hitchcock were combatted by publishers of magazines who declared that the first-class mail which resulted from their advertising pages paid a sum which was more than equivalent to the alleged loss by the government in transporting the entire magazine at the rate of one cent a pound. Legislation authorizing the increase on the rate of advertising matter to four cents a pound was introduced into Congress, but no action had been taken at the close of the year.

**RURAL MAIL SERVICE.** Next to the heavy loss resulting from the low postage on second-class mail, the chief inroad into the profits of the postal service is made by the excessive cost of rural delivery. The Postmaster-General, however, declares that the advantages of this delivery are such as to warrant its further extension even at a considerable loss to the government. During the year the star route and rural delivery systems were consolidated and this is expected to bring about a considerable reduction in expense.

**POSTAL SAVINGS BANKS.** The discussion of the postal savings bank system as it was inaugurated in 1910 in accordance with an act of Congress on June 25 of that year, will be found in the article POSTAL SAVINGS BANKS.

**FRAUDULENT USE OF THE MAILS.** An aggressive crusade was carried on by the Post Office Department during the year against the fraudulent use of the mails. During the last few months of 1909 the principal officers of 32 corporations, companies and firms were placed under arrest by post-office inspectors for swindling the public by this method. In 46 additional cases individuals were arrested for conducting similar schemes to defraud. The Postmaster-General estimates that the 80 important cases brought to a head during the year represent swindling operations that have filched from the American people in less than a decade fully \$100,000,000. As the work of investigation proceeded it became apparent that schemes for swindling through the mails were vastly more numerous and extensive than had been supposed. Many of these enterprises proved to be as far reaching in their ramifications as the postal service itself. Not only have they swindled many thousands of people out of money foolishly invested, but to a large extent they have weakened confidence in legitimate enterprises. The former practice of the Post-Office Department in issuing fraud orders in such cases proved ineffective. While by that method the offending concern was deprived of the use of the mails it was a simple matter for its promoters to organize under a new name and thus evade the law. In the present crusade the department's plan has been to secure the arrest, conviction and imprisonment of the swindlers themselves. Swindling through the mails has become so extensive as to require the constant employment of numerous inspectors in the work of suppression. The results of all investigations are turned over to the Department of Justice to determine the question of prosecution.

**PRESIDENTIAL POSTMASTERS.** During the year President Taft issued an order classifying all assistant postmasters. The Postmaster-General in his annual report declares that the entire postal system should be taken out of politics. He recommends that all presidential postmasters

of all grades from the first-class to the third should be placed in the classified service. This policy he says would unquestionably result in a better standard of service. The old practice of making frequent changes for political purposes had a most demoralizing effect and resulted in unwarranted expenditures due to poor management. The inclusion of postmasterships as a part of the classified postal service would furnish a new incentive for good work on the part of subordinate officers and employes ambitious to reach ultimately the rank of postmaster.

The order of President Taft, referred to above, dated September 30, 1910, becoming effective December 1st, placed within the competitive service the position of assistant postmaster at every first and second class post office. These postmasters numbered 2237. The order included also 1386 clerical positions in first and second-class offices. With this action practically all positions in the post offices mentioned became a part of the classified competitive service.

#### PENSIONS

The total number of pensioners on the rolls at the close of the fiscal year 1910 was 921,083, which was a decrease during the year of 25,111. New pensions granted during the year numbered 29,219 and the losses from the rolls by death and from other reasons was 54,330 leaving the net loss, as indicated above, 25,111. The number of the survivors of the Civil War on the rolls at the close of the year was 562,615, a net reduction of 31,345. The total number of survivors whose names were dropped from the roll during the year on account of death was 35,312. The number of soldiers and sailors on the pension roll at the close of the year was 602,180; the number of widows and dependents was 318,461 and the number of army nurses was 442. At the close of the year there remained on the rolls one pensioner of the Revolutionary War, a daughter. There remained 338 widows pensioners of the War of 1812, 1560 survivors and 2822 widows of soldiers of the Indian Wars; 2042 survivors and 6359 widows of soldiers of the War with Mexico. The survivors of the War with Spain numbered 22,783, while the widows numbered 1183. The total disbursements for pensions during the fiscal year was \$159,974,056. The average value of each pension at the close of the year was \$171.90, an increase of \$2.08 per pensioner, as compared with the previous year. This increase was due to the increase of pensions granted by the bureau upon applications filed by pensioners and to the increased rates granted by Congress, through what are known as special acts. The number of special act pensioners on the roll at the close of the year was 19,422, an increase of 3015. The amount expended for navy pensions was \$3,335,457. An act of Congress provides that the naval pensions shall be paid from the income of the navy pension fund as far as that fund is available for the purpose. The income from the fund, however, pays only about 7 per cent. of the amount required for navy pensions. The total amount disbursed was divided as follows: To invalids, widows, minors, and dependents of the regular establishment, \$3,000,990; to invalids, widows, minors and dependents of the Civil War, \$44,657,104, and by the Act of February 6, 1907, \$60,821,754. There was dis-

tributed also on account of the Civil War by the Act of June 27, 1890, \$13,625,202. To the invalids, widows, minors and dependents of the War with Spain was disbursed \$3,807,919; to the widows of the War of 1812, \$51,279; to the survivors and widows of the War with Mexico, \$1,463,984; and to the survivors and widows of the Indian Wars, \$621,509. The total amount disbursed for pensions from 1866 to 1910 was \$3,976,811,125, and the total disbursements for pensions from 1790 to 1910 was \$4,073,056,569. The largest amount paid in any one year was in 1909 when \$161,973,703 were disbursed. The largest number of pension certificates issued in any one year since 1901 was in 1908, when 328,676 certificates were issued. This was chiefly due to special legislation passed in 1907. At the close of the fiscal year 1910 there were pending 47,295 claims for pensions. Of these 34,818 were on account of the Civil War. Since 1861 there have been granted by special acts of Congress 32,401 pensions and increases of pensions. During the second session of the 61st Congress 6063 persons were included in the special acts passed. During the year 61 cases of criminal prosecutions on account of offenses against the pension laws were brought, in 55 of which convictions were secured.

#### PATENTS

The total number of patents granted in the fiscal year ending June 30, 1910 was 36,287, an increase of 1955 over the fiscal year preceding. At the end of the year arrangements had been made for removing models of invention from the storage warehouse to the sub-basement of the House of Representatives' Office Building. As a result of the increase in the business of the patent office and the increased force that must necessarily be provided from year to year, the present building is now crowded to its utmost capacity. The Secretary of the Interior in his annual report recommends the building of an addition to the Patent Office in the court of the present building or by constructing a new building either for the use of the Patent Office or for the Secretary's Office and one or more of the bureaus.

#### NATURALIZATION

The total number of declarations of intention filed during the fiscal year 1910 was 167,226. Of these the largest number, 42,582, were filed in the courts of the State of New York. In the Illinois courts 14,032 were filed and in the California courts, 6529; in the Massachusetts courts, 11,985, and in the Pennsylvania courts 18,887. The total number of petitions for naturalization filed was 55,038 and the total number of certificates of naturalization issued was 39,206. Of these, 7928 were issued from New York. The number of courts State and Federal exercising naturalization jurisdiction in the year 1910 was 2474. Of these the State courts numbered 2247, and the Federal courts 227. The burden of naturalization work is borne largely by the Federal courts, for although they constitute but 10 per cent. of the total number which received naturalization papers in 1910 they received 36 per cent. of the declarations of intention, more than 27 per cent. of the petitions and gave certificates on more than 28 per cent. of all the petitioners who were admitted to citizenship.

#### BUREAU OF MINES

By an act of Congress approved May 16, 1910, which became operative on the July following, Congress established under the Department of the Interior a National Bureau of Mines. The widespread demand for the creation of this bureau has been developed among the varied mining interests for a number of years in recognition of the increasing importance of mining as one of the foundation industries of the country. Its establishment was hastened by a succession of serious mining disasters during the past few years and by a growing realization of the extent to which the mineral resources of the country were being wasted in both the mining and metallurgical branches of the industry. The main purpose of the bureau is to aid in lessening this loss of life and waste of resources in the operation of the mining industry. The act creating the bureau transferred to it the experienced personnel including a considerable number of engineers and chemists and the extensive equipment brought together and employed under the Geological Survey in the development of investigations similar to those which are being conducted by the Bureau of Mines. The present organization, therefore, will serve as a nucleus in the beginning of a more extensive work to be hereafter developed. The Bureau of Mines will continue to conduct the investigation of the fuels belonging to or for the use of the government heretofore carried on by the Geological Survey. Its largest and most urgent work for some time, however, will be that connected with the investigation of mine explosions and the methods of preventing them. The Bureau will take no part in mine supervision or mine inspection which are within the province of the several States. It will, however, do what it can to encourage the investigation of local mining problems by the States and private corporations most directly interested. The Bureau will not undertake to do or to supplant the professional work which is now being done or is to be done by private mining engineers. Its main work will be in conducting such investigations and inquiries as relate to the more general phases of the mining and metallurgical branches of the industry and the distribution of the results of its investigations and inquiries among the mine workers and mine operators of the country in such a manner as will be most effective in accomplishing these purposes. Joseph A. Holmes was appointed Director of the Bureau.

#### DISTRICT OF COLUMBIA

The number of inhabitants of the District of Columbia, according to the enumeration of the United States Bureau of Census during the month of April, 1910, was 331,069. The total expenditures for the administration of the government of the District during the fiscal year 1910 amounted to \$12,815,795. The total receipts amounted to \$13,179,714. The total enrollment in the schools of the District for the fiscal year was 56,136. Of these 38,071 were white and 18,065 were colored.

Two new street railway lines were constructed during the year, one by the Baltimore and Washington Transit Company, and the other by the Washington Spa Springs and Greta Railway Company. The old navy yard bridge

across the Anacostia River was replaced by the new Anacostia Bridge. The estimated value of the building work done during the year, not including government buildings, was \$16,431,946. The number of permits issued was 10,937.

The affairs of the District are administered by three commissioners, appointed by Congress. These commissioners in 1910 were Cuno H. Rudolph, John A. Johnston, and William V. Judson.

#### CABINET

The President's Cabinet remained unchanged during 1910. A strong effort was made to induce Secretary Knox to become candidate for governor of Pennsylvania and it is possible that he would have agreed to do this had it not been for the strong objection of President Taft. (See PENNSYLVANIA.) Mr. Dickinson, Secretary of War, made a long tour, which included the Philippine Islands, and an account of this will be found in the article PHILIPPINE ISLANDS. Although there were rumors of possible resignation during the year, Mr. Ballinger continued to hold his place as Secretary of the Interior. The bitterness of the attacks against him somewhat abated during the year, although the decision of a majority of the committee of the Senate and House acquitting him from all blame in the Ballinger-Pinchot controversy was severely criticised by his opponents. These incidents are discussed in the section *Administration* below.

Mr. Hitchcock's administration of the Post Office Department resulted in a decrease of the customary deficit by about \$11,000,000. The proposal to increase the postage on second class matter aroused much criticism, especially on the part of publishers of periodicals and magazines. This is discussed under *Post-Office*. The Cabinet at the end of the year was composed as follows: Secretary of State, Philander Chase Knox of Pennsylvania; Secretary of the Treasury, Franklin MacVeagh of Illinois; Secretary of War, J. M. Dickinson of Washington; Secretary of the Navy, John von L. Meyer of Massachusetts; Secretary of the Interior, Richard A. Ballinger of Washington; Secretary of Agriculture, James Wilson, of Iowa; Postmaster-General, Frank H. Hitchcock of Ohio; Attorney-General, George W. Wickersham of New York, and Secretary of Commerce and Labor, Charles Nagel of Missouri.

#### CUSTOMS COURT

In accordance with the act of Congress creating a Customs Court of Appeals, President Taft early in 1910 named as judges of the new court Alfred C. Coxe, presiding judge, William H. Hunt, James F. Smith, O. H. Barber, and Marion De Vries. Some criticism was made of these appointments, and before the Senate could act on their confirmation they were withdrawn and the President sent new nominations, naming Robert N. Montgomery of Michigan as presiding judge. The associate judges were James F. Smith of California, Arion M. Barber of Vermont, and Marion De Vries of California. The salaries of these judges were fixed by law at \$10,000, but Congress appropriated for the year 1909-10 only \$7000 and the Urgent Deficiency Appropriation Act, approved February 25, 1910, made that allowance permanent. This court has final jurisdiction over all disputed questions connected with customs.

**CUSTOMS FRAUDS.** An account of the conviction of the officials of the American Sugar Company for customs fraud perpetrated against the government will be found discussed in detail in the article **TRUSTS**.

The activity of Collector Loeb of New York in enforcing the customs laws against smuggling, which began with his assumption of office, continued during 1910. More persons were convicted of smuggling during the year than in many years previous. They were punished by fines and in several cases by imprisonment.

In September Charles D. Drew and Charles H. Wardell, former custom house weighers, and George E. Bedell, former deputy surveyor of the Custom House, New York City, were tried for fraudulent weighing and the taking of bribes from importers. Among those who testified were four men who had been weighers, who declared that they had weighed fraudulently and had been paid for it. One of these men named six Italian firms of importers that had bribed him and another named eight. One of the men who confessed was Register of Deeds for Passaic county, New Jersey. Thomas Doyle, formerly dock superintendent for Arbuckle Brothers, sugar refiners, asserted that his superior officers paid through him salaries of \$100 per month to custom house weighers, and that two of the defendants had been so paid. George Lunny, a go-between for importers, named six weighers whom he declared he had bribed. He said that he had never found a weigher who would not weigh dishonestly if he were paid for doing so. Otto Westervelt, formerly the head of an old importing house of New York City, confessed that he had paid weighers for false weighing, using Lunny as an agent. In October members of the art firm of Duveen & Co. were indicted for defrauding the government by undervaluing art objects which they import and sell to collectors. They were also defendants in a civil suit in which the government seeks forfeitures exceeding \$1,000,000.

In November assertion was made by government officials that prominent firms of importers in New York City have for several years been defrauding the treasury by undervaluation and that the government has lost duties amounting to several millions of dollars. A civil suit was begun against Joseph Brooke and Company, importers of woollens and worsteds, to recover \$200,000, alleged to be due the government through undervaluation of imports.

#### DIPLOMATIC SERVICE

The Ambassadors accredited by the United States to foreign countries remained unchanged during the year. Whitelaw Reid, Ambassador to Great Britain, the only ambassadorial appointee left over from the Roosevelt administration, continued in office and, although there were rumors of a possible successor during the year, nothing was said or done by the President to indicate that Mr. Reid would not continue to serve during the former's term. In October, Oscar C. Straus, Ambassador to Turkey, informally submitted his resignation to President Taft. Mr. Straus had served in this position since May, 1909. The reason given by him for his retirement was that he was wearied of the diplomatic service and wished to resume his residence in the United States. No action

had been taken on this resignation at the end of the year. Mr. Straus has the distinction of having served as diplomatic representative at Constantinople under three successive appointments. He was first named as Minister to Turkey on March 24, 1887. Two years later he resigned. He was appointed to the same post in 1898 and again served only two years. From 1906 to 1909 he was Secretary of Commerce and Labor. Among Ambassadors accredited to the United States by foreign countries there were three changes during the year. Joaquim Nabuco, from Brazil, one of the most accomplished and esteemed foreign representatives at Washington, died on January 17, 1910. His body was conveyed to Brazil by a United States war vessel. Edmundo Mayor des Planches, Ambassador from Italy, was succeeded early in the year by Marchese Cusani-Confalonieri. Hussein Kiazim Bey, Turkish Ambassador, appointed in 1909, was recalled and was succeeded by Youssef Zia Pasha.

Among the Ministers Plenipotentiary sent by the United States to foreign countries there were many changes during the year, especially in the countries of South and Central America. The most interesting appointment perhaps was that of Fred W. Carpenter, formerly Secretary

to the President who on his resignation from this office was appointed Minister to Morocco. James F. Stutesman, Minister to Bolivia, resigned from the diplomatic service and was succeeded by Horace G. Knowles, formerly Minister to the Dominican Republic. Mr. Knowles was succeeded at San Domingo by W. W. Russell, who formerly represented the United States in Venezuela. To succeed Mr. Russell, John W. Garrett of Pennsylvania was appointed. Another interesting appointment was that of W. D. Crum as Minister to Liberia. Mr. Crum was the colored Collector of Customs at Charleston, S. C., whose appointment to that position was one of the troublesome questions of President Roosevelt's administration. The other changes in Central and South America were chiefly transfers of the Ministers from one post to another.

There were also numerous changes made in the Ministers representing foreign countries in the United States. New Ministers were appointed from Belgium, from Chile, whose Minister, Don Anibal Cruz, died during the year, from Colombia, Cuba, Ecuador, Norway, Sweden, Persia and Spain. The Ambassadors and Ministers from and to the United States will be found in the table below:

#### AMBASSADORS

Country	Accredited by United States	Accredited to United States
Austria-Hungary.....	Richard C. Kerens, Mo., 1909	Baron Hengelmüller von Hengervár.....1902
Brazil.....	Irving B. Dudley, Cal., 1909	J. J. Jusserand.....1903
France.....	Robert Bacon, Mass., 1909	Count Johann Heinrich von Bernstorff.....1908
Germany.....	David J. Hill, N. Y., 1908	James Bryce.....1907
Great Britain.....	Whitelaw Reid, N. Y., 1905	Marchese Cusani-Confalonieri.....1910
Italy.....	John G. A. Leishman, Pa., 1909	Baron Yasuga Uchida.....1909
Japan.....	Thomas J. O'Brien, Mich., 1907	Don Francisco de la Barra.....1909
Mexico.....	Henry L. Wilson, Wash., 1909	Baron Rosen.....1905
Russia.....	W. W. Rockhill, D. C., 1909	Youssef Zia Pasha.....1909
Turkey.....	Oscar H. Straus, N. Y., 1909	

#### MINISTERS PLENIPOTENTIARY

Argentina Republic.....	Charles H. Sherrill, N. Y., 1909	Don Epifanio Portela.....1905
Belgium.....	Charles P. Bryan, Ill., 1909	Count Conrad de Buisseret.....1910
Bolivia.....	Horace G. Knowles, Del., 1908	Don Ignacio Calderón.....1904
Chile.....	Henry P. Fletcher, Pa., 1909	
China.....	W. J. Calhoun, Ill., 1909	Chang Yin Tang.....1909
Colombia.....	Elliott Northcott, W. Va., 1909	Don Francisco de P. Borda.....1910
Costa Rica.....	William L. Merry, Cal., 1897	Joaquín Bernardo Calvo.....1899
Cuba.....	John B. Jackson, N. J., 1909	Dr. Francisco C. Justiz.....1910
Denmark.....	Maurice F. Egan, D. C., 1907	Count Moltke.....1908
Ecuador.....	William C. Fox, N. J., 1907	Dr. Don Rafael M. Arizaga.....1910

 § Accredited also to Paraguay.

## FEDERAL JUDICIARY

The year 1910 was marked by greater and more important changes in the personnel of the United States Supreme Court than perhaps any other year in the history of the government. The deaths of Chief Justice Fuller and Associate Justice Brewer caused two vacancies, while the resignation of Associate Justice Moody, on account of illness, created a third. It was well known that President Taft considered the appointment of Justices of the Supreme Court one of the most important functions of his office and his choice of jurists to fill these offices was anticipated with the greatest interest. On April 25 he appointed Governor Hughes of New York Associate Justice to succeed Justice Brewer. It had been known that the President wished Governor Hughes to accept this position and it was also known that the latter preferred judicial to political duties. The appointment and its acceptance therefore were no surprise. Governor Hughes's well-known ability as a lawyer, his knowledge of public affairs and his high moral character, in the opinion of men of all parties, eminently fitted him for a place on the Supreme Bench. In December President Taft appointed Associate Justice Edward Douglass White (q. v.) to succeed late Chief Justice Fuller (q. v.) as Chief Justice of the Supreme Court. The appointment was, in a measure, a surprise, as it had been generally expected that Justice Hughes would receive this appointment. It was said that opposition arose to the appointment of the latter, partly on account of his inexperience on the bench and partly on account of a temperament somewhat less compromising than was deemed essential in the case of a presiding justice. Mr. Justice White is a Southerner and a Democrat, a veteran of the Civil War on the Confederate side. He has long been considered one of the most able of the jurists on the Supreme Bench, and his appointment was received with general satisfaction. The President at the same time appointed Joseph R. Lamar (q. v.) of Augusta, Ga., formerly Justice of the Supreme Court of Georgia, and Willis Van Devanter (q. v.) of Wyoming, judge of the Eighth Judicial District, Associate Justices. The Supreme Court as made up at the end of the year was composed of six Republicans and three Democrats. The members of the court, with the dates of their appointments, are as follows: Chief Justice Edward D. White, Louisiana (1910); Associate Justices, John M. Harlan, Kentucky (1877); Joseph McKenna, California (1898); Oliver W. Holmes, Massachusetts (1902); William R. Day, Ohio (1903); Horace H. Lurton, Tennessee (1909); Charles E. Hughes, New York (1910); Willis Van Devanter, Wyoming (1910); Joseph R. Lamar, Georgia (1910).

JUDICIAL DECISIONS. The Supreme Court rendered many important decisions during the

year. The most important and interesting from a public standpoint were those relating to corporations and railroads, and these will be found discussed under the headings RAILWAYS and TRUSTS. In April it was announced that the great Tobacco and Standard Oil cases would have to be argued again before the court as a result of the death on March 28 of Justice Brewer and the absence of Justice Moody on account of illness. On May 31 the court restored to the docket for reargument the sixteen cases brought to test the legality of the corporation tax law. This postponed the decision on these important cases for at least six months. On November 28 several important decisions were handed down. These included the affirmation of a judgment of the Supreme Court of Michigan affirming a judgment awarded to the Commercial Milling Company of Detroit against the Western Union Telegraph Company for damages under Michigan law because of failure to deliver on time a message filed for transmission to Kansas City. The Telegraph Company attacked the constitutionality of the Michigan statute of 1893, which permits an action for damages against the telegraph companies for failure to deliver messages promptly as an interference with interstate commerce. This statute was upheld by the decision of the United States Supreme Court.

The first decision written by Justice Hughes was handed down on this date. This affirmed a decision of the United States Circuit Court for the District of Massachusetts, which held insufficient three counts on an indictment against Frank H. Mason, formerly clerk for the Federal Court of the District of Massachusetts on the charge of embezzlement. Mason was indicted in 1909 on the charge of embezzling approximately \$1000, covering a period of about three years' service. The money was paid him as fees and emoluments and the amount alleged to have been retained unlawfully was in excess of the compensation he was entitled to take to meet expenses and to pay himself for his services. The trial court held that under the law regulating the compensation of clerks of the Federal courts the title to the money received by Mason did not vest in the United States immediately upon the receipt of it by the clerk. In reviewing the case Justice Hughes held that not until after the statement of account had been formally made by the court clerk was there any obligation to pay over to the government and that even then, if the clerk were found to be indebted, his relation was that of debtor and not of trustee. The decision of the Federal Court for the District of Massachusetts was unanimously affirmed. The conviction of W. S. Harlan and Robert Gallagher, and others in peonage cases in the United States District Court for the District of Florida were affirmed by the United States Supreme Court on November 28, in a decision by Justice Day.

COURT OF COMMERCE. The newly established

Court of Commerce created by Congress in 1910 was organized by the following appointments made by President Taft in December: Presiding Judge, to serve for five years, Martin A. Knapp, of New York, formerly chairman of the Interstate Commerce Commission; judges of the court, Robert W. Archbald, formerly United States District Judge of Pennsylvania, to serve four years; William H. Hunt of Montana, formerly Association Justice of the Customs Court, to serve for three years; Judge Arthur C. Denison of Michigan, formerly United States District Judge, to serve for two years, and Julian W. Mack, a lawyer of Chicago, to serve for one year.

#### CONGRESS

The Sixty-first Congress was distinguished by one special and two regular sessions. The first session, called on March 15, 1909, by President Taft, passed the Payne-Aldrich tariff bill, which was the special reason for its convening. In addition, several other important measures were enacted into law.

**SECOND SESSION.** The second session, which began on December 6, 1909, was notable for the large number of important measures passed. President Taft's first regular message was read on December 7. It proved to be a calm, judicial paper, from which discussion of many of the most important questions before Congress and the country were omitted for the reason stated by the President that he intended to send to Congress special messages relating to these subjects. A large part of the message was taken up by the report of the relations of the government to foreign nations, forming a résumé of the political history of the United States in its foreign relations during the current year. The President recommended the favorable action of Congress toward the reorganization of the State Department on modern lines. He commended to the consideration of both Houses the question of embodying in the statute the principles of the executive order upon which the efficiency of the consular service is wholly dependent. He declared that the most important question presented to the administration in his opinion is that of economy in expenditure and sufficiency in revenue. In the matter of the tariff, President Taft referred especially to the maximum and minimum clause and the tariff board, and expressed the opinion that no tariff war with foreign countries would result from the operation of the former as interpreted by him. The work of the tariff board, he said, would occupy perhaps two or three years, and he asked from Congress a continued appropriation equal to that already made for its prosecution. Among other matters discussed in the message were second class mail matter, postal savings banks, ship subsidy, the admission of New Mexico and Arizona as States, Alaska, the white slave traffic, and political contributions to elections. The time of Congress previous to the Christmas holidays was largely taken up by the consideration of the Ballinger-Pinchot controversy. This will be found discussed in the section *Administration* below.

Both branches of Congress reassembled after the holiday recess on January 4. On January 7, the President sent in his long expected special message recommending certain amendments to the interstate commerce and anti-trust laws. The President recommended the establishment of a United States Court of Commerce, to be

composed of five Federal circuit judges, to be given jurisdiction in a variety of cases arising under interstate commerce laws and having to do especially with the regulation of railroads. One of the most important sections of the message had to do with prohibiting railroads from acquiring stock or otherwise getting an interest in or control of competing lines.

The message contained other suggestions, some of them intended to give the Interstate Commerce Commission greater authority to protect trainmen in pursuit of their work by the use of improved appliances. The second half of the message dealt with the anti-trust law. The President made a deliberate and judicial analysis of the development of great corporations, the tendency towards monopoly and the aims and meaning of the Sherman Anti-Trust law. Mr. Taft proposed to allow the anti-trust law to remain as it is, but to do away with certain objections that have arisen through its interpretation. He suggested a method of granting Federal incorporation to good trusts in place of the method of examining the affairs of industrial corporations by the Department of Commerce and Labor. He stated that the Attorney-General had prepared a bill providing for such a scheme. This bill makes it the duty of the Commissioner of Corporations to examine into all the preliminaries in the case of their application, and after due inquiry, to issue a certificate of incorporation. It contains restrictions regarding stock issues in order to insure the sound and conservative character of every certificate holder. Each company thus incorporated must file an annual report covering specific matters. There was a clause in the bill which authorized any Federal corporation to hold a controlling interest in the stock of kindred State corporations, under certain restrictions.

The railroad bill, which became a law on June 18, differed in many ways from the bill that was originally introduced. See *Congressional Legislation* below and *RAILWAYS*. The passage of this bill through Congress was attended by some of the most notable debates heard in Congress in recent years. The chief opponent of the bill as it originally stood was Senator Cummins of Iowa, and by his efforts, seconded by the efforts of others of the progressive Senators, he was able to have included in the final bill certain features which met with strong opposition among the more conservative Senators. The insurgents, in combination with the Democrats, on May 2 struck out the sections relating to traffic agreements and mergers. The regulars were obliged to adopt, in addition, a drastic prohibition against a greater charge for a short than for a long haul and a clause bringing telephone and telegraph companies within the scope of the act. The bill finally passed the Senate on June 3, by a vote of 50 to 12, the opposition being solidly Democratic. The House bill had already been passed on May 10, and the measures were at once brought to conference. In spite of the efforts of the House managers of the bill, the stock and bond regulation provision was omitted by the conferees. No physical valuation clause could be made satisfactory to the Senate conferees, and this, too, was dropped from the bill. The commission was authorized to investigate alleged stock watering and the like as a substitute for the original demand. The wording of the House bill was

Willis Van Devanter	Horace Harrison Lurton	Charles Evans Hughes	Joseph Rucker Lamar
Oliver Wendell Holmes	John Marshall Harlan	Edward Douglass White (Chief Justice)	Joseph McKenna
			William R. Day

UNITED STATES SUPREME COURT

34

adopted for a long and short haul proposition, with an addition by the conferees prohibiting railroad carriers that have lowered their rates in competition with a water route from increasing these rates later unless the Interstate Commerce Commission considers conditions to have changed. The provision in the House bill that the circuit judges should form the Commerce Court instead of the judges of the Circuit Court of Appeals, as the Senate bill had provided, was retained. See **RAILWAYS**.

Several days after the President's message on the amendments of the interstate commerce and anti-trust laws had been received, he forwarded a message on conservation, recommending legislation. The laws passed in accordance with these recommendations will be found in the section *Congressional Legislation* below and in the article **CONSERVATION**.

On March 5, the postal savings bank bill, the first of the administration's measures to reach a vote, was passed in the Senate. This followed a sharp debate in which the chief feature was the opposition to the bill on the part of the Republican insurgents, led by Senators Cummins and Dolliver. The chief provision of the bill to which they were opposed was that which permitted investment of the deposits in the outstanding \$730,000,000 of 2 per cent. bonds now mainly held by national banks as a basis for circulating notes. This investment was favored by the President. Senator Dolliver asserted that such investment was intended to relieve the banks and clear the way for the establishment of a central bank of issue. The provision was warmly defended by Senator Root, who held that without investment in government securities the bill would be unconstitutional. An amendment introduced by Senator Smoot, supported by the regular Republicans, empowered the President to withdraw the deposited funds from local banks for investment in government securities in time of war or when such action is demanded for the country's welfare and the national credit. An amendment to this, offered by Senator Cummins, granting this power only in time of war, was lost by a vote of 18 to 40, while an amendment offered by Senator Borah restricting such investments to securities yielding at least  $2\frac{1}{4}$  per cent. was adopted by a vote of 49 to 11. The amendment of Senator Smoot was then adopted by a vote of 46 to 24, and the bill was passed, 50 to 22, all the Republican Senators, and one Democrat, Senator Chamberlain of Oregon, voting for it. The restriction contained in the amendment of Senator Borah prevented investment by the government in the \$730,000,000 of 2 per cent. bonds mentioned above. For a general discussion of the bill see **POSTAL SAVINGS BANKS**.

**CHANGE IN HOUSE RULES.** One of the most momentous incidents in the history of Congress in recent years was the change in the rules, brought about on March 18, by an alliance between the insurgent Republicans and the Democrats. This was the culmination of an effort, extending over a considerable period of time, to bring about certain changes, especially in the arrangement of the Committee on Rules, which determines the parliamentary procedure of the House. Speaker Cannon had always resisted any effort for the change, chiefly, it was alleged by the insurgents, because he wished to continue to hold an almost absolute control over the course of legislation. The Committee on Rules is one

of the principal agencies through which the House conducts its business and under the system that had existed for many years, the Speaker himself was chairman of the Rules Committee. His associates were Mr. Dalzell of Pennsylvania, Mr. Smith of Iowa, Mr. Clark of Missouri, leader of the Democratic minority, and Mr. Fitzgerald of New York, Democrat. The struggle which culminated in the victory of the insurgents and Democrats was the final achievement of a struggle which actually began in 1909. The incident began in what seemed to be a trivial episode. Mr. Crumpacker of Indiana, chairman of the committee of the census, asked unanimous consent to bring forward a small amendment to the census law against which there could be no opposition. The technical question arose whether he was in order by reason of certain rules of the House as to the calendar. Mr. Crumpacker took the ground that since the census is amendatory in the constitution, his motion relating to it was one of privilege, and therefore superior to the rules. His point was sustained after a protracted debate. Immediately after the decision on this point Mr. Norris of Nebraska, a well known insurgent, asked for recognition. On the Speaker's inquiry for what purpose he desired recognition, he stated that he had a resolution involving a point of constitutional privilege. Upon this assertion he was recognized by the Speaker. When the resolution was read it proved to be one demanding a new committee on rules, much larger than the committee as it then existed, to be elected by the majority and minority members of the House with the distinct proviso that the Speaker should not be a member. Mr. Norris's motion was made on Thursday, and it resulted in a parliamentary battle which lasted throughout that night and was continued through the following day. This struggle was signalized by the efforts of the insurgents and Democrats to bring about a vote, and the attempts of the Speaker to postpone the vote until he should be able to command the votes of many of the Representatives who were absent and who, he was certain, would vote against the resolution. He was unable to postpone the vote, however, any longer than Saturday afternoon. He then declared his readiness to rule upon the question, and in a carefully prepared opinion, he announced his decision that the resolution was out of order and could not be entertained. On the vote which immediately followed as to whether the decision of the chair should be sustained or not, thirty-five Republican insurgents voted with the entire body of Democrats and the decision of the Speaker was overruled. A resolution was at once offered declaring the office of the Speaker vacant, but on this vote the Republican Representatives broke away from the Democratic minority in such numbers as to defeat the resolution and the Speaker remained in possession of the chair. Less than a quarter of the insurgents allowed themselves to be counted in favor of deposing Mr. Cannon.

After their success in bringing about a revision of the personnel of the Committee on Rules, the insurgent Republicans decided that they would not insist that one of their group be made a member of the new Committee on Rules. On March 23 a caucus was held to select the party's six members of the new committee. At this meeting the insurgent Republicans were

present as well as the regulars. Speaker Cannon was also present, but took no part in the proceedings. Representative Tawney, who had been closely associated with the Speaker, chose six names, which, it was understood, had been selected by the regular Republicans in conference. The list was withdrawn because objection was made to a "slate" being made in advance. The Representatives whose names appeared on the list were, however, chosen Republican members of the Committee on Rules. They were the following: Walter I. Smith of Iowa, John Dalzell of Pennsylvania, George P. Lawrence of Massachusetts, J. Sloat Fassett of New York, Sylvester C. Smith of California, and Henry S. Boutell of Illinois. Representative Dalzell, and Walter I. Smith were members of the old committee. The other members of the committee had already been prominent in the regular majority. Late on the following day the Democrats at their caucus selected the following as the Democratic Representatives on the Committee: Champ Clark of Missouri, Oscar Underwood of Alabama, Lincoln Dixon of Indiana, and John F. Fitzgerald of New York. Of these Mr. Fitzgerald was a member of the old committee. By unanimous vote on May 25 the House elected the ten members named above and the committee elected Mr. Dalzell to be its chairman.

**MISCELLANEOUS.** On April 19 it became known by the publication of a letter addressed by him to the governor of Rhode Island, that Senator Aldrich would not be a candidate for reelection. At the same time it was announced by Senator Hale that he would retire at the end of the present session. These Senators in point of service were among the oldest in the Senate and were the most powerful members of that body in shaping and passing legislation. Senator Aldrich was chairman of the Finance Committee and he had a chief share in the passage of the Payne-Aldrich tariff bill. He was also a member of other important committees of the Senate. Senator Hale was chairman of the Committee on Appropriations, which is second only to the Finance Committee in importance and power. He was also a prominent member of the Naval Committee, of which he was at one time chairman. Strong opposition to his re-election had developed, and to this was, in some degree, attributed his decision. These two Senators held the first two places in what is commonly called the "steering committee" which determines the programme of legislation. Senator Aldrich stated that his retirement was due to the condition of his health.

On May 26th there was a sharp debate in the House concerning the customary appropriation of \$25,000 for the President's traveling expenses. As the appropriations for the fiscal year had been exhausted, the Committee on Appropriations proposed that the appropriations for the coming year be made "immediately available." On a point or order raised by Mr. Macon, a Democrat of Arkansas, these words were stricken out. Thereupon Representative Tawney, chairman of the committee, attacked the Democratic representatives, charging that they had urged the President to accept their invitation to visit their States during his trip to the South and had then turned about and criticised him in the House for spending money in traveling. Mr. Tawney charged also that the President had been charged board at one place

in the South. He then read a list of 36 Democratic Senators and Representatives who had invited the President to visit their States, and of Southern Representatives who had been guests of the President on his special train. He admitted that this list had been obtained from the President's secretary. Mr. Tawney's charges were denied by Southern Representatives, and on the following day a letter from the President was made public in which he denied that he had received any inhospitality in the South, and said that the intimation or suggestion that the acceptance by Congressmen of the President's invitation to travel on the train with him in their respective districts or States was a reason why they should not vote their free opinion of such an appropriation, was to him a most painful one. He declared that a suggested reflection upon southern hospitality was especially distressing to him and said that the charge that somewhere in the South he had been charged board had no foundation in fact. On the same day Mr. Carpenter, President Taft's secretary, resigned and was at once appointed Minister to Morocco.

On June 16 a bill providing for the admission of New Mexico and Arizona as separate States was passed in the Senate by a unanimous vote and on the 18th the House accepted the bill, which then became a law. The bill requires that the new constitutions of the two States be ratified by Congress and approved by the President. Constitutional conventions must be held and the constitutions submitted to the people before the act shall take effect.

By a vote of 152 to 105 the House had insisted upon an amendment to the Sundry Civil Appropriation bill, providing that no part of the money given to be used for the enforcement of the Sherman Anti-Trust law should be expended in prosecuting combinations of workmen. This attempt to exempt labor unions from the operation of the law in case of a boycott was not approved by President Taft. A telegram protesting against his opposition was sent to him by the Locomotive Engineers and Firemen's Brotherhood, then in convention. The President replied by telegraph as follows: "The Supreme Court decided that the boycott is in violation of the Sherman Anti-Trust law and this proposal is an attempt to withhold the means of prosecuting that law when it is violated by a particular class to be made privileged. I am entirely opposed to such class legislation. If it was proposed to amend the language of the Sherman Anti-Trust law itself so as somewhat to narrow its scope, that would present a proper question for consideration but so long as the present Anti-Trust law remains upon the statute books, an attempt to modify its enforcement so as to render immune any particular class of citizens, employers or employes, is improper legislation, and in my judgment ought to be opposed by your Brotherhood. A laboring man and a trade unionist, if I understand him, asks only equality before the law. Class legislation and unequal privilege, though expressly in favor, will, in the end, work no benefit to him or society." Largely as a result of the disapproval of the President, the House on June 23 reversed its action and voted 138 to 130 to agree with the Senate in excluding exemption.

The River and Harbor bill, which appropriates \$52,000,000, was not signed by the

President until June 25. He then sent to Congress a message severely criticising the measure and saying that at one time he had reached the conclusion that it was his duty to interpose his veto. He had afterwards changed his opinion because the bill had many good features, and the failure of it would embarrass the constructing engineers and cause loss. He emphatically expressed his disapproval of the piecemeal policy pursued with respect to the appropriations for many of the projects, several of which ought to be abandoned, and urged that there should be reform in the preparation of such bill, saying that a failure to adopt a reform would, the next time, justify a veto.

The satisfaction felt by the President in regard to the legislation passed by Congress is shown by the following statement on June 23. "I am elated at the legislation which has been enacted by this Congress. It has fulfilled the pledges of the party. It is a great satisfaction to me that we have accomplished so much. It has been the custom of the past to try and fulfill party pledges during the term of the President elected; we have secured what we set out to get during the first regular session of Congress. We now have the best railroad regulation law we ever had. The provisions for the supervision of capitalization were omitted but this does not mean that they have been abandoned. Renewed effort to enact them will be made at the next session. I think the party in power has enacted legislation which will inure greatly to its benefit. It has kept its contract. Congress, which is now closing its first regular session, has done what it promised the people to do, and the Republican party has a good record to take to the people in the coming election."

A measure of considerable interest, though not of the first importance, was that providing for the National Glacier Park in Northern Montana.

The incidents connected with the charges against Senator Lorimer will be found discussed under Illinois, and the incidents resulting from the charges made by Senator Gore in the last days of the session that attempts had been made to bribe him, will be found in the article OKLAHOMA.

**APPROPRIATIONS.** The appropriations made in the second session of the Sixty-first Congress amounted to \$721,313,900, including \$37,885,000 for the Panama Canal. The largest appropriations were for the Interior Department, \$214,754,278; for the Navy Department, \$119,596,870, with an additional appropriation of \$14,790,122 for building new vessels. The appropriations for the War Department were \$122,322,178; for river and harbor improvements, \$49,390,541. For the Post Office Department the appropriations amounted to \$2,085,005, with \$10,634,022 additional for deficiency in postal revenues; for the Department of Agriculture, \$17,821,836; for the Department of Commerce and Labor, \$14,169,969, and for the Department of Justice, \$9,648,237.

**THIRD SESSION.** The Sixty-first Congress assembled for its third or short session on December 5, 1910. During the summer months between the adjournment of the second session and the opening of the third, the Senate lost by death three of its most prominent members. These were Samuel D. McEnery of Louisiana (q. v.); Senator John W. Daniel of Virginia (q. v.); and Senator Jonathan P. Dolliver of Iowa

(q. v.). Senators Daniel and McEnery were among the older members of the Senate, and for years had been prominent in that body. Senator Dolliver in his comparatively brief service had become known as one of the strongest debaters and most efficient workers in the Senate. At the beginning of his service he had been found with the more conservative branch of the Chamber, but for several years previous to his death he had become identified with the aggressive insurgent group and was found in the thick of every fight in which this wing took part, notably in opposition to certain measures of the tariff bill of 1909, and to certain portions of the railway bill passed in 1910.

President Taft's second regular message to Congress was received on December 6. This followed in general plan his first message in that it contained a résumé of the foreign relations of the United States and continued recommendations for economy in administering the affairs of the government. The President outlined the work of the Tariff Board and urged the necessity for its continuation. The President referred with gratification to the outcome of the arbitration of the fisheries dispute between the United States and Great Britain submitted to and decided by The Hague Tribunal (see INTERNATIONAL ARBITRATION).

Perhaps the most notable utterances contained in the message from an international standpoint were concerned with the proposed peace commission provided for at the first session of the Sixty-first Congress. This measure authorized the appointment by the President of a commission of five members to consider the expediency of utilizing existing international agencies for the purpose of limiting the armaments of the nations of the world by international agreement and of constituting of the combined navies of the world an international force for the preservation of international peace, and to consider and report upon any other means to diminish the expenditures of government for military purposes and lessen the probabilities of war. The President stated that he had not yet made appointments to this commission because he had invited and was awaiting the expression of foreign governments as to their willingness to coöperate with the United States in the appointment of similar commissions and representatives who would meet with the United States Commissioners, and by joint action seek to make their work effective. The President urged the fortification of the Panama Canal and declared that its fortification was necessary to the adequate policing and protection of the canal. Many of his recommendations had to do with reform in judicial procedure. He renewed his recommendation made in his last annual message in view of the passing of a law to regulate the issuing of injunctions in equity without notice, in accordance with the best practices now in vogue in the courts of the United States.

The President recommended that the coal deposits of the government be leased after advertising for competitive bids for terms not exceeding fifty years with a minimum rental and royalties upon the coal mine to be adjusted every ten or twelve years. He also advocated the lease of water sites and he earnestly urged general conservation legislation. Among the other recommendations were amendments for the

immigration law and for further legislation relating to safety appliances on railroads, the valuation of railroads and for the prevention of fraudulent bills of lading. On December 7 the Ballinger-Pinchot investigating committee made its report, the majority of the committee completely exonerating the Secretary of the Interior (see ADMINISTRATION below). The Indian Appropriation bill and the River and Harbor Appropriation bill passed the House before the Christmas holidays, and an Urgent Deficiency bill of \$1,000,000 was passed by both Houses of Congress.

Several important bills were introduced before Congress adjourned over the holidays, but no important action was taken in regard to them.

**CONGRESSIONAL LEGISLATION.** The session of Congress from December, 1909, to July, 1910, passed over 300 public acts and 50 public resolutions. Many of these were, of course, the routine appropriation bills or local measures. There were, however, about 50 important measures passed exclusive of these, and of this number several were the most noteworthy passed in any recent session of Congress. They included nearly every article in the President's legislative programme outlined in his message in December, 1909. Of the measures which he favored, practically the only ones to fail of passage were the shipping subsidy bill, the bill for the restriction of the use of injunction in labor disputes and the bill for the creation of a national board of health. Although they were of a nature which did not come as prominently in the public eye as some others, amendments to the Federal bankruptcy law were of great importance. They were the first made since 1903. Twelve sections of the act were amended. The most important change vests corporations other than municipal, railroad, insurance or banking with the privilege of voluntary bankruptcy.

The desire of the President for more definite legislative authority for the withdrawal of public lands from settlement resulted in the passage during the last days of the session of an act authorizing him "at any time in his discretion to temporarily withdraw from settlement, location, sale or entry, any of the public lands of the United States \* \* \* and reserve the same for water power sites, irrigation and other public purposes." The withdrawal remains effective until revoked by the President or by Congress, but the lands withdrawn are open to exploration and to the purchase of minerals other than coal, oil, gas and phosphates. Withdrawals do not affect bona fide occupants or claimants who are diligently prosecuting work on such lands at the time of the passage of the act, and no additions to forest reserves are to be made in Oregon, Washington, Idaho, Montana, Colorado or Wyoming, except by act of Congress. Another act authorized the use of certificates of indebtedness to the amount of \$20,000,000 for the purpose of completing existing reclamation projects.

Several important measures relating to the punishment of crimes were passed. Among these the most conspicuous was that relating to the white slave evil. One measure amended the immigration act so as to exclude not only prostitutes, but also all persons supported wholly or partly from their earnings. The commissioner-general of immigration is instructed

to gather information regarding the procurement of alien white slaves, to exercise supervision over them and to obtain their statements. An enactment designed to prevent the escape on the plea of immunity of persons giving testimony was passed. This declares that the provision hitherto providing that "no pleading of a party, nor any discovery of evidence from a party or witness by means of a judicial proceeding in this or any foreign country, shall be given in evidence or in any manner used against him or his property or estate, in any court of the United States, in any criminal proceeding, or for the enforcement of any penalty of forfeiture" has been struck from the statutes. Important measures were passed providing for improved methods of caring for prisoners in the Federal prisons and allowing parole under certain conditions. After having been before Congress for several years and failed of passage, a measure was enacted requiring from political committees and from individuals who contribute \$50 or more toward the election of Representatives in Congress, not through political committees, sworn statements of the following items: (1) names and addresses of contributors of \$100 or more; (2) total of contributions in amounts less than \$100; (3) total of all contributions; (4) names and addresses of persons to whom \$10 or more is disbursed "and the purpose thereof"; (5) total disbursements of sums less than \$10; (6) total of disbursements. These statements are to be filed with the clerk of the House of Representatives. The act applies only to the national committees or to committees acting in two or more States and there is no publicity of the items until after election.

Several important changes were made in the laws relating to the seal fisheries in Alaska. The administration of these fisheries is transferred from the Secretary of the Treasury to the Secretary of Commerce and Labor. The latter is granted authority to permit the killing on the Pribiloff Islands of a certain number of male seals, the number to be fixed by the Secretary of Commerce and Labor and the skins to be sold for the benefit of the United States treasury. This provision is due to the opinion of some of the government experts that the surplus of male seals is causing a diminution of the herd. Other changes in the law extend the boundaries of the government reservation so as to cover all the Pribiloff Islands instead of merely a few of the islands and to establish a close time season for the whole year instead of a few months, unless otherwise ordered by the Secretary of Commerce and Labor. The sections authorizing the lease of two of the islands are repealed, but the Secretary is authorized to purchase the fixtures of the former lessee. The prohibition of the killing of seals by American citizens on high seas is extended to the entire Pacific Ocean. Formerly it was limited to that portion of the ocean north of 35° N. latitude. Undoubtedly the most important measure before Congress and the one which attracted the widest popular attention and discussion was that which amended the interstate commerce laws of 1887, 1889 and 1906. The changes recommended by President Taft will be found noted in the paragraphs above. Of the measure as finally passed, the following are the chief provisions:

A commerce court was created to consist of five circuit judges, who are to be appointed in the first instance by the President. The terms of office are so arranged that one judge will retire from the court annually, his place being filled by some circuit judge to be designated by the chief justice of the Supreme Court. After 1914 no reassignment of a judge to the commerce court shall be made until a year has elapsed after the close of his former service. The judge senior in designation is to act as presiding judge. This court is to have the jurisdiction now possessed by the circuit courts of the United States over all cases for the enforcement of the orders of the Interstate Commerce Commission; all cases brought to enjoin or suspend wholly or in part any order of the Interstate Commerce Commission; such cases as by section 3 of the act regulating commerce in foreign nations and among the States are authorized to be maintained in a certain court of the United States; all such mandamus proceedings as under the proceedings of section 20 or section 23, as amended, are authorized to be maintained in the Circuit Court of the United States. The jurisdiction of the Commerce Court over these cases is exclusive. The regular sessions of the court are to be held in Washington and the jurisdiction is invoked by petition served by the marshal. Final judgments may be reviewed by the Supreme Court on appeals taken within sixty days after entry of the decree. The Attorney-General represents the interests of the government and may intervene in any private suit in the Commerce Court in which the public interests are involved. The Interstate Commerce Commission may be represented by counsel and the Attorney-General may employ special counsel.

Other amendments to the interstate commerce acts extend the jurisdiction of the commission to telegraph, telephone and cable companies, whether wire or wireless, engaged in the transmission of messages otherwise than wholly within a single State.

The long and short haul clause of the measure regulating rates for carrying freight by the railroads was a subject of much discussion in Congress. The provision forbids the charging or receiving of "any greater compensation in the aggregate for the transportation of passengers or of like kind of property for the shorter than for the longer distance over the same line of route in the same direction, the shorter being included within the longer distance." A new proviso forbids the commission to order any change in rates for violation of the section within six months following the passage of the act. There was a further provision that when railway and water carriers compete and railway rates have been reduced, they shall not thereafter be increased unless after hearing "it shall be found that such proposed increase rests upon changed conditions other than the elimination of water competition."

An important change in the law permits the commission to act on its own initiative on most matters within its province. Immediately upon receiving a new schedule of rates, the commission may suspend them for a period as long as 120 days from the time they would otherwise go into effect and if a hearing on the rate is pending and uncompleted, may later order a further suspension of not exceeding six months.

The burden of proof is on the carrier to show the justice and reasonableness of any rate increased since January 1, 1910. The commission is also empowered under restrictions specified in the acts to initiate through rates and joint classifications when the carriers neglect to do so. For a further discussion of these amendments as relating to railroads, see the article RAILWAYS.

In response to a general desire among those interested in mines and mining for the establishment of such a bureau, a bureau of mines was created in the department of the interior. This bureau was given the supervision of investigations of structural material and the duty of testing fuels, and it receives an appropriation of \$400,000 to enable it to study and report upon the causes of mine explosions. The bureau is to have no right or authority in connection with the inspection or supervision of mines or metallurgical plants in any state, but may merely investigate methods and appliances and report the results.

Several important measures relating to navigation were passed. Motor boats were brought within the field of maritime legislation. They are classified in three grades, by their length; and the lights, bells, whistles and life preservers for the different sized boats are prescribed by Congress. The lighthouse service was reorganized and made a bureau in the department of Commerce and Labor.

One of the most noteworthy achievements of the year was the adoption of the postal savings bank bill. A general discussion of this act will be found in the article POSTAL SAVINGS BANKS. Three important changes were made in the postal laws. One of these relieves the department of the duty of returning registry receipts, unless the sender requests such returns. Another relieves postmasters issuing money orders from the necessity of sending a note of advice to the offices on which they are drawn. The third permits the postmaster general to prescribe a period other than thirty days within which undelivered letters shall be returned to the sender.

The admission of Arizona and New Mexico as States will eliminate all Territories within the contiguous territory of the United States. The statutes regulating the admission of these two States are similar to those of a few years ago admitting Oklahoma and Utah.

Among the miscellaneous measures passed were the following: A commission was appointed to investigate the methods of reducing the expenses of the Federal government; to promote universal peace; to investigate the Department of the Interior, and the Bureau of Forestry; to investigate the subject of employers' liability and workmen's compensation for injuries; to advise the proper officials as to the location and care of monuments and other works of art to be erected in the streets and squares of the District of Columbia.

The President was authorized to invite the International Congress on Refrigeration to meet in this country and was empowered to request the governors of the several States to appoint committees to cooperate in making preparation for the Fifteenth International Congress on Hygiene and Demography, which is to meet in the United States in 1911-12. An appropriation was made for defraying the cost of raising the battleship *Maine*, and of in-

tering the bodies of the sailors there found in the Arlington National Cemetery. The mast of the destroyed vessel is to be erected in the cemetery as a monument to the memory of those who lost their lives at the time of the destruction. The employers' liability law of 1908 was amended so that action may be brought either in a State or Federal court in the district either where the defendant resides or where the cause of action arose, or where the defendant does business at the time of the commencing of the action. Any action brought in the State court is not to be removed to the Federal court. Rights of action under the act and the amendments survive to personal representatives for the benefit of surviving husband,

wife, children, parents or dependent next of kin.

The method of determining the heirs of deceased Indians in order to dispose of their allotments is defined in much detail.

An insecticide act was passed which took effect January 1, 1911. This supplements and follows the pure food and drugs act by forbidding the manufacture, transportation or sale, either in the territories or the District of Columbia or the extra-territorial possessions, or the transportation in interstate commerce of adulterated or misbranded Paris green, lead arsenate or other insecticides or fungicides. The duty of enforcing this act is imposed upon the Secretary of Agriculture.

CONGRESSIONAL REPRESENTATION. The State representatives in the 61st Congress were as follows:  
[Republicans in roman; Democrats in italic.]

## ALABAMA.

## SENATORS.

## ADMINISTRATION

The record of President Taft's administration in 1910 in its larger issues will be found discussed in other portions of the article UNITED STATES and in the articles bearing on governmental activities as TRUSTS, CONSERVATION, RECLAMATION, PUBLIC LANDS, TARIFF, etc. The present paragraphs are intended only to sum up those events which do not properly find their place under any other title.

**BALLINGER-PINCHOT CONTROVERSY.** The vexing Ballinger-Pinchot controversy which at the end of the year 1909 was approaching a crisis, continued to fill a large place in public discussion during the greater part of the year 1910. The charges brought by L. R. Glavis, formerly Chief of the Field Division of the General Land Office, which were brought before President Taft in August, 1909, charged Mr. Ballinger, Secretary of the Interior, with improper conduct in connection with the patenting of coal lands in

Alaska, and especially of the so-called Cunningham claims. Mr. Glavis charged that Mr. Ballinger had used his influence in 1908 during a period from his resignation as Commissioner of the Land Office to the time when he was appointed Secretary of the Interior, to aid the patenting of these claims which, it was alleged by Mr. Glavis, were based on fraudulent and unlawful entries. These charges, together with an opinion upon them made by the attorney-general, were examined by President Taft and as a result he directed the discharge of Mr. Glavis from the service of the government and issued a statement in which he entirely exonerated Mr. Ballinger. This action, however, did not stop the public discussion. Gifford Pinchot, the Chief Forester, was admittedly hostile to Mr. Ballinger's administration of the General Land Office and made no attempt to conceal the fact that he was in sympathy with the charges made by Mr. Glavis, believing them to be true. Indeed it was upon Mr. Pinchot's advice that Glavis went to the President with his charges against Secretary Ballinger.

Several prominent magazines assumed a hostility to Mr. Ballinger's administration of office and to his qualifications for that office, and it was assumed that a portion of the material used in the preparation of articles published in these magazines was furnished by officials of the Forestry Bureau who were opposed to Secretary Ballinger. In November, 1909, the Secretary denied the charges made against him, but agitation continued and on December 21 the matter was taken up in the Senate where Senator Flint of California submitted a resolution calling for all the papers relating to the Alaska coal land charges which were based on the charges of Glavis against Secretary Ballinger. This resolution was passed and a statement was immediately made by Senator Jones of Washington that this was in accordance with the personal wishes of the Secretary of the Interior. It was decided on December 28 that an investigation should be carried on by the joint committee of the Senate and the House to consist of six members of each House.

On January 7 President Taft removed Gifford Pinchot, Chief Forester, and with him two leading subordinate officers of the Forestry Bureau, Overton W. Price, associate forester and Albert C. Shaw, assistant law officer. Two days before a joint resolution had been introduced into Congress for the investigation demanded by Secretary Ballinger. On January 6, when in answer to a resolution, the Senate received from the President the report of the Attorney-General and other statements which had guided him when he exonerated Secretary Ballinger and ordered the dismissal of L. R. Glavis, Field Agent of the Land Office, a letter was read from Mr. Pinchot by Senator Dolliver, to whom it had been written at his request as chairman of the Committee on Agriculture. This letter was the immediate cause of Mr. Pinchot's removal. It was mainly a defense of his subordinates, Price and Shaw. Mr. Pinchot said that these men had made public certain official information concerning the Cunningham coal claims in Alaska and had countenanced the publication of certain facts by L. R. Glavis after his removal. They had also in other ways directed public attention to the imminent danger that the Alaska coal fields might pass into private hands. This information came to their knowledge officially and

Mr. Pinchot said was of a nature proper to be made public unless there were secrets which the people were not entitled to know concerning the sources, nature and progress of claims made for portions of the public lands. Mr. Pinchot said that he had sent Shaw to aid Glavis at the latter's request, in arranging his material for submission to the President. The letter contained an intimation that the decision of President Taft exonerating Secretary Ballinger and dismissing Glavis had been arrived at by a mistaken impression of the facts. He admitted that his subordinates had violated a rule of propriety in certain of their actions and declared that they deserved a reprimand for this and had received one, but that he should recommend that no further action concerning them be taken. They had, he said, successfully directed public attention to the national danger. He disclaimed any desire to shirk any part of his own legitimate responsibility for what they had done. Following the reading of this letter the assertion was made by Senator Hale that Mr. Pinchot had been guilty of a serious breach of the rules for the conduct of government officers and had disobeyed President Taft's order relating to the giving out of information by subordinates. After consideration in two cabinet meetings, the President ordered the removal of Mr. Pinchot, Mr. Price and Mr. Shaw. He also sent to Mr. Ballinger a letter. In this the President stated that Price had offered to Secretary Wilson his resignation "on the ground that he had been engaged by Mr. Shaw in instigating the publication in various newspapers and magazines of articles attacking the good name of Secretary Ballinger and of charging the Interior Department and the Land Office with corruption." He pointed out that Secretary Wilson had asked for Mr. Pinchot's recommendation in regard to this and that the latter had said that he wished to make a statement which should be read in the Senate at the same time that the President's message transmitting the record in the Glavis case reached there and that Mr. Pinchot had given Senator Dolliver this statement to read, against the advice of Secretary Wilson, the former's superior. After some comments on Mr. Pinchot's action in this regard the President's letter continues: "In order to understand the full purport of your letter, in which you admit the complicity of Price and Shaw in the publications of the press, it should be said that the gravamen of the Glavis charges was that Secretary Ballinger and the others were all affected by a corrupt wish to patent 33 so-called Cunningham claims upon coal lands in Alaska; that the question whether these claims were fraudulent or not remained to be decided upon the evidence after both the United States and the claimants had been heard; that every patent as an Executive act is completely within the jurisdiction of the President to direct the withholding of it in order that he himself may examine the evidence as to the validity of the claim." In the light of these facts the President declared that Mr. Pinchot's letter contained plain intimation that the President had reached a wrong conclusion as to the good faith of Secretary Ballinger and the officers of the Land Office, although Mr. Pinchot and his subordinates had seen only the evidence of Glavis the accuser, and had never read or seen the evidence of those accused or the records that they disclosed which were submitted to the President.

The President declared that Mr. Pinchot's letter further intimated that without the exploitation by Messrs. Shaw and Price in the daily, weekly and monthly press of the charges of Glavis, the administration, including the President and the officers of the Interior Department and the Land Office, would have allowed certain fraudulent claims to be patented on coal lands in Alaska, although the matter had been specifically brought to the attention of the President by the Glavis charges. The President asserted that the letter to Senator Dolliver was written for the purpose of offsetting in the public mind the President's decision in the Glavis case, supported by the opinion of the Attorney-General after a full examination by both of the evidence adduced by the accuser and the evidence on behalf of the accused. This letter, he declared, was in effect an improper appeal to Congress and the public to excuse in advance the guilt of the subordinates before the President could act and against the President's decision in the Glavis case before the whole evidence on which that was based could be considered. The President concluded as follows: "By your own conduct you have destroyed your usefulness as a helpful subordinate of the government, and it therefore now becomes my duty to direct the Secretary of Agriculture to remove you from your office as the Forester." In connection with the removal of the Forester, the House of Representatives voted on January 7 to withhold from the Speaker the power to appoint the six members of the investigating committee and to vest this power in the House itself. The vote was 149 to 146. Twenty-three Republican insurgents joined the Democrats.

Following his dismissal Mr. Pinchot published a long statement in which he declared that he proposed to stay in the fight for conservation and equal opportunity, and would support the administration when it moved toward the paramount end, which is the welfare of the plain people. He asserted that out of the forestry service grew the conservation movement. He declared that the situation was serious and that the dangers which confronted the movement to-day must be met by positive congressional action.

The members of the joint committee making the investigation concerning all questions involved in the Pinchot-Ballinger controversy were composed of six Senators and six Representatives. The Republicans were Senators Nelson of Minnesota, Flint of California, Sutherland of Utah, and Root of New York; Representatives McCall of Massachusetts, Olmsted of Pennsylvania, Denby of Michigan, and Madison of Wisconsin. Democrats, Senators Paynter of Kentucky, and Fletcher of Florida; Representatives Graham of Illinois and James of Kentucky.

On January 12 the President appointed Henry S. Graves Chief of the Forestry Service.

The investigating committee began its deliberations shortly after its appointment, and held sessions more or less regularly until the termination of the first session of the Sixty-first Congress. A vast amount of testimony was taken. Mr. Pinchot took the stand in defense of Mr. Glavis, and made a sharp criticism of Secretary Ballinger's administration of the Land Office. Mr. Ballinger appeared in his own behalf, denied all charges against him and declared that a conspiracy to blacken his character was at the base of the whole matter. The

evidence, on the whole, was, to the lay reader, inconclusive. The accusers of Mr. Ballinger were unable to bring convincing proof of actual misconduct in office, while Mr. Ballinger's attitude on the stand showed personal resentment and feeling to such a degree as to prejudice many against him. The case against Mr. Ballinger was presented by Louis D. Brandeis.

On the termination of the first session of the Sixty-first Congress, the committee adjourned, subject to the call of the chairman, without passing upon the testimony taken. Pursuant to the call of the chairman the committee met in Minneapolis on September 7, with only six members or less than a quorum present, four Democrats, Mr. Madison and Chairman Nelson. The Democrats and Mr. Madison adopted a resolution censuring Secretary Ballinger. Mr. Nelson refused to vote and declared that no quorum was present. Several weeks later six of the eight Republican members of the committee met in Chicago and adopted a resolution rebuking their colleagues for attempting to put through a resolution when no quorum was present. In December a majority of the committee submitted its report to Congress. This was signed by Senators Nelson, Flint, Sutherland and Root, and Representatives McCall, Olmsted and Denby. This report declared the charges against Secretary Ballinger to be unsustained by the evidence given. The conclusion was reached by a majority of the committee that "Neither any fact proved nor all the facts put together exhibit Mr. Ballinger as being anything but a competent and honorable gentleman, earnestly and faithfully performing the duties of his high office, with an eye single to the public interest." The findings in relation to the Cunningham coal claims was that the charges and insinuations against Secretary Ballinger in regard to these land entries or other coal land claims in Alaska are not justified and his conduct in respect thereto is not justly censurable. The minority members of the committee reported as follows: "That Richard A. Ballinger has not been true to the trust reposed in him as Secretary of the Interior, that he is not deserving of public confidence and that he should be requested by the proper authorities to resign his office." Mr. Madison, in a separate report, substantially agreed with the findings of the minority. No action had been taken by Congress on this report at the end of the year.

ACTIVITIES OF THE PRESIDENT. On February 12, President Taft made a long address at the annual Lincoln Dinner of the Republican Club of New York City. His subject was the promises and policy of the Republican party. He declared that the party had either substantially complied with or was about to perform these promises within the present session of Congress. He asserted that while the party platform had promised revision, it had not expressly said that the revision was to be downward, although such a revision was fairly implied. He claimed that the revision of 1909 was a downward revision, not only with respect to silks and liquors, and high priced cottons in the nature of luxuries, but with respect to nearly all other articles except woollens, which were not affected at all. The change which this tariff affected, he said, was a marked change downward in the rate of duties. The President declared that the

amount of misrepresentation to which the bill had been subjected had never been exceeded in this country. He pointed out that for the first six months of the new tariff the average duty on all dutiable imports had been 21.9 per cent. against 24.3 per cent. for the corresponding periods of the preceding four years under the Dingley tariff. He declared that there had been an increase of revenue which for the six months amounted to \$166,002,856 against the Dingley Tariff semi-annual average of \$130,265,841 and an average of \$83,147,625 under the Wilson-Gorman tariff. He asserted that the new tariff was the best that had ever been passed and that it indicated the adoption by the Republican party of a policy to change from an increase of duties to a reduction of them, and to increase revenues at the same time. The President drew attention to bills pending in Congress for the regulation of railroad rates, for the admission of New Mexico and Arizona to statehood and to conservation bills. He praised the bill introduced in Congress to amend the Sherman Anti-Trust law in the form of a Federal incorporation bill prepared by the Attorney-General. He said that he believed the bill was constitutional and that it would furnish a solution of the present difficulties. The remainder of the President's speech was a general defense of the Republican party since it had control of the government.

At a dinner of the National League of Republican Clubs at Washington on April 9, President Taft made an address in which he urged the Republicans to be loyal to the party. He declared that this was the time for doing things, for passing the measures which represented the party's policies. As directly bearing upon his attitude toward the insurgents, the following paragraph from the President's speech attracted much attention: "Tonight we are reading nobody out of the party. We want all in the ranks and all have the opportunity to establish their claims to Republicanism by what they do in Congress. When the evidence is shown that a member of the party does not desire the success of the party and is unwilling to redeem the party's pledges, the label he bears is not that of Republicanism \* \* \* No man has a right to read another out of the party. He reads himself out if he is disloyal and if he cannot by his own work show his colors. I want the help of all Republicans, even if some have slipped away a little." On the same day before the Hamilton Club in Chicago, Attorney-General Wickersham made a long and elaborate review of the first year of Taft's administration. His references to the insurgents were in an altogether different vein from those of President Taft quoted above. He declared that it was time for those who claimed to be Republicans and worked against the policies of the Republican party, to leave the latter party and join the Democrats. He declared that everyone must choose whether he is for the President and the party. If anyone wishes to join the Democratic party, he said, let him do so, but let him not claim to be a Republican and in and out of season work to defeat the Republican measures and subvert the influence of a Republican President.

From April 29 to May 5, the President with Secretary Knox made a short trip, during which he stopped for two days in Pittsburg.

Here he made an important address in which he warmly commended Secretary Knox in an elaborate review of the work of the State Department. He declared that the example set by the last administration in cultivating good relations with all the South American and Central American republics had been followed closely by Mr. Knox. He said that to the latter's tact and diplomatic guidance was largely due the fact that a war between Peru and Bolivia was avoided. Mr. Knox, he continued, was bending his energies to procure an agreement between Peru and Ecuador. The President warmly defended the action of Secretary Knox in regard to Nicaragua. He assailed Zelaya as tyrannical and unprincipled, and to him attributed the troubles which had arisen in that country. The President declared that "the theory that the field of diplomacy does not include in any degree commerce and the increase of trade relations is one to which Mr. Knox and this administration do not subscribe. We believe it to be of the utmost importance that while our foreign policy shall not be turned a hair's breadth from the straight path of justice, it may well be made to include active intervention to secure for our merchandise and for our capitalists opportunity for profitable investment which shall inure for the benefit of both countries concerned." He pointed out that the State department was endeavoring to assist Americans in securing railway contracts in Turkey, to obtain for American capital a share of the railway loans in China and to maintain the policy of the "open door" in the Orient. He praised as a direct contribution to the cause of peace Secretary Knox's project for evolving a general court of arbitral justice out of the theory of the Prize Court Convention drawn up by The Hague Conference. On May 4, at a luncheon given by the Business Men's League in St. Louis, the President spoke of the Supreme Court, having in mind a criticism of the appointment of Governor Hughes, made by Mr. Bryan. The President declared that the Supreme Court was to him the most sacred part of the government. He said: "I believe that we all, Democrats and Republicans, Republicans and Insurgents, as patriotic citizens—and we are all that—are in favor of having upon that bench men who are foes of nothing but what is wrong and are in favor of equal justice to every one, whether that be an organization of men doing business under the law and using the instrumentality of a corporation to promote the industries of the country, or be he the humblest citizen struggling with his hands to earn a living for his family. I do not mean to say that men by their habits of life may not acquire a bent or prejudice in one direction or another and that it is not wise to select for the highest tribunal men who have such a bent and who have in their makeup the danger of prejudice to one interest or against another, but I do mean to say that there is in the public journals and in what I may call the cant of the demagogues a disposition to charge that kind of a bent in favor of corporate wealth and corporate greed and corporate monopoly when there is no justice for the charge at all. This assumption of peculiar honesty, manifested by class declaration and the stirring up of class spirit is something that ought to be deprecated in our Republic or else it will lead

to great danger. We ought to take up the discussion of public questions and discuss their effect with judicial calmness and not have our minds diverted by charges of prejudice and corrupt motives." The President also spoke of the great need of reform in methods of litigation to prevent delay which gave advantage to the man with the highest resources.

On September 5 the President addressed the Conservation Congress at St. Paul, (see CONSERVATION) and on September 19 he met Mr. Roosevelt in New Haven.

On September 21, President Taft made an address on the occasion of the completion by the government of a dam on the Ohio River, a few miles below Cincinnati. The President severely criticised the piecemeal method of providing for river and harbor improvements, describing the method of legislation for improvements in two-thirds of the congressional districts. He pointed out that the distribution of the sum available was made with very little regard for the comparative merits of the several projects and that the completion of every improvement was delayed for years. He declared that there should be a supervising Board of Engineers to recommend the improvements in the order of their importance. He said that he had intended to ask Congress for authority to organize a board, empowering it to determine whether certain projects should not be laid aside or abandoned. He said, "In signing the last River and Harbor bill, which had many of the characteristics of previous bills, and was subject to the criticism that many items were contained therein that were merely piecemeal, I indicated to Congress that another bill of that character would merit a veto. I ventured to say this in order to bring to the attention of Congress the necessity for a change in the form of the bills, and I am hopeful that with the reason and argument all on the side of the change, the suggestion contained in my memorandum may be given weight. Certainly until this fundamental reform is put into effect, the improvement of our rivers and inland waterways will be chiefly important because of the local advantages of the money expended, and not because of the betterment of our transportation.

"The evil in the corrupt control of a Congress or a legislature by private interest is manifest and always calls for condemnation. But there is another kind of legislative abuse as dangerous to the public weal in certain of its aspects as corruption, and that is the selfish combination of the representatives of a majority of the constituencies to expend the money of the government for the temporary benefit of a part, or with little benefit to the whole. It is the duty of the majority and the minority to legislate always for the benefit of the whole people, and any enactments that look to the selfish exploitation of less than the whole at the expense of the whole, and without benefit to the whole, is a species of legislative abuse that comes very near corruption, in its effect, and is perhaps more dangerous than corruption, because those who support such a combination are generally bold in its defense.

"The days of the pork barrel should be numbered. The country is roused against the corporate or corrupt control of legislative agencies, but it is doubtful whether the con-

stituencies as yet are able to perceive the higher obligation on the part of themselves and their representatives not to use their votes in combination to appropriate to a part that which belongs to the whole."

In September President Taft issued a statement in the form of a letter signed by his secretary in which he declared that the political patronage should no longer be withheld from Senators and Congressmen who had hitherto been opposed to his policies. In his letter the President made the following statement: "While Republican legislation pending in Congress was opposed by certain Republicans, the President felt it to be his duty to the party and to the country to withhold Federal patronage from certain Senators and Congressmen who seemed to be in opposition to the administration's efforts to carry out the promises of the party platform. That attitude, however, ended with the primary elections and nominating conventions which have now been held and in which the voters have had an opportunity to declare themselves. The people have spoken, and as the party faces the fall elections the question must be settled by Republicans of every shade of opinion whether the differences of the last session shall be perpetuated or shall be forgotten. \* \* \* He will now follow the usual rule in Republican Congressional districts and States and follow the recommendations made by Republican Congressmen and Senators of whatever shade of public opinion, only requiring that the men recommended shall be good men, the most competent and the best fitted for the particular office. "It was generally believed that by this statement the President wished to indicate that so far as he was concerned the opposition to the insurgent Senators and Representatives on the part of the administration would cease in the interest of party harmony.

The President as usual spent the summer months at Beverly, Mass. On June 1, Charles D. Norton, Assistant Secretary of the Navy, was appointed Secretary to the President in place of Fred W. Carpenter who had resigned and had been appointed Minister to Morocco (see DIPLOMATIC SERVICE). The appointment of Mr. Norton was taken to be an indication that the President wished an advisor who was acquainted with the political conditions throughout the country.

President Taft took no active part in the political campaign of 1910 except that he wrote several letters, the most important of which was that relating to the political affairs of the State of New York (see NEW YORK). He did not seem to be greatly affected by the Democratic victories and on the day following the election sailed for Panama on a long anticipated visit to the Canal. Here he made a careful inspection of the work, remaining four days. On his return he visited several cities in the South, including Richmond, Va.

**ECONOMY OF ADMINISTRATION.** President Taft has been especially anxious to bring about a reduction in the expenses of administering the government. His measures have all dealt with this subject, and in November, 1910, he appointed Dr. Frederick A. Cleveland, one of the directors of the Bureau of Municipal Research in New York City and an authority in public accounting and administration, to carry on an inquiry into the administration of the various

departments with a view to possible reorganization with a resulting decrease in the expenditures. Dr. Cleveland was carrying on his researches in the business of the various departments at the end of the year.

**PANAMA LIBEL SUITS.** The libel suit brought by the United States government against the corporation publishing the *New York World*, was brought to trial on January 24, 1910, before Judge Hough in the United States Circuit Court at New York. This suit grew out of an indictment of the corporation in 1908 for criminal libeling of Theodore Roosevelt, Douglas Robinson, his brother-in-law, William H. Taft, Charles P. Taft and William Nelson Cromwell. The substance of the assertions published was that, as a result of early information from President Roosevelt and Secretary Taft, Mr. Robinson and Charles P. Taft were able to make enormous profits by buying up the stock of the French Panama Company for about \$4,000,000, while the government afterwards paid \$40,000,000 for the same stock. Judge Hough directed that the indictment be quashed on the ground that it was not sufficiently authorized by the statute on which it rested. This is an old law which makes penal codes of State applicable for the punishment of offenses committed on Federal reservations or within their boundary. The offense in this case was the circulation of a newspaper article in the West Point Reservation and in the Post Office Building in New York City. Judge Hough held that this did not fall within the original intention of the law. In his opinion the appeal should be made to the Supreme Court. Similar action was taken in 1909 in the case of the indictment against the proprietors of the *Indianapolis News* for publishing the same article.

#### CAMPAIGN AND ELECTIONS OF 1910

Details of the elections of 1910 as they relate to the election of State officers and legislatures will be found in the political history of the different States. The paragraphs below are intended to sum up the general results of the election, chiefly as they relate to national politics.

A strong Democratic trend made evident through special elections held in Massachusetts, New York and several other States indicated that if Congress remained Republican it would be by the narrowest possible margin. Students of politics were not agreed as to the causes of this Democratic tendency, although there was no lack of theories to account for it. Among these were the Payne-Aldrich tariff bill, dissatisfaction with certain policies of President Taft's administration and local factional disputes in different States. The sentiment of Democratic victory had become so pronounced before the elections of November 8 that only the most sanguine Republicans hoped for a general Republican victory.

The chief interest centred in New York, always a doubtful State, and in Indiana, New Jersey, Massachusetts and in several of the Middle Western States where Republican insurgency had gained an especially strong footing.

The election resulted in a Democratic victory greater even than the most optimistic Democrats had prophesied. Democratic governors were elected in the normally Republican

States of Maine, Connecticut, Massachusetts, New Jersey and Oregon. As a result of the changes in the State legislatures, Democratic Senators will succeed Republicans in the States of Indiana, Missouri, Montana, Nebraska, New Jersey, Maine, New York, Ohio and West Virginia.

As a result of the elections, the House of Representatives in the Sixty-second Congress will be composed of 228 Democrats and 168 Republicans with one Socialist and one vacancy, a Democratic majority of 66. This may be compared with the composition of the House in the Sixty-first Congress, which was 215 Republicans, 175 Democrats, with one vacancy, or a majority of 40. The total vote cast for Congressmen in the election is of considerable interest. There were cast for Democratic Congressmen 5,721,580 votes; for Republican Congressmen 5,598,814 votes; scattering, 727,366 votes. The Democratic plurality was 128,766. The popular vote for Congressmen in 1908 was as follows: Republican, 7,242,985 votes; Democrats, 6,558,517 votes. Thus it appears that while the Democrats gained slightly more than 1,000,000 votes the Republicans lost nearly 2,000,000. The analysis of the vote in the different States shows that the victory was due, not so much to an accession of Democratic votes as to a loss in Republican votes. For example, Governor Harmon received approximately 477,000 votes in Ohio while Mr. Bryan in his last candidacy received 502,000. In New York the Democrats did not even poll their full vote. Governor Dix received fewer votes than did the Democratic candidate in the previous election. The same is true in nearly all other States in which the Democrats were victorious. The Republicans will have such a slender majority in the Senate in the Sixty-second Congress that a few changes by death will give the Democrats complete control of congressional legislation, especially in view of the fact that the Republican Senators are divided in their policy and the insurgent Senators are not unlikely to vote with the Democrats if occasion arises.

The most conspicuous individual figure in the campaign and election was Theodore Roosevelt. Declaring upon his arrival in the United States that he would take no active part in politics, he was constrained by circumstances to devote almost his entire energy from the conventions in September to the elections in November to matters connected with the campaign. He made speeches in all parts of the country and his declaration of policies on the "new nationalism" became one of the chief issues of the campaign. Just how much effect Mr. Roosevelt's participation had in the result depends upon the point of view of the observer. Those hostile to him declared that it was a large factor in the Republican defeat on account of his radical utterances, while his supporters insist that the Republicans would have been defeated in any event and that Mr. Roosevelt if anything reduced the Democratic majorities.

#### FOREIGN RELATIONS

The foreign relations with the United States were without serious incident in 1910. Conditions in Central America remained unsettled owing chiefly to the disorders in *Nicaragua*.

The capture and execution of two American citizens, Groce and Cannon, by the Zelayan government in 1909, together with other offenses, made it the duty of the American government to take measures with a view to ultimate reparation and to the safeguarding of all its interests. Diplomatic relations were discontinued with Nicaragua in 1909 but the expulsion of Zelaya and the accession of President Estrada brought about changed relations between the two countries. The new government showed a conciliatory attitude toward the United States and promises were given that reparation would be made for all injuries. Soon after his inauguration as President, Señor Estrada sent a message to Secretary Knox assuring the American people of the warm regard entertained for them by the victorious revolutionists and requesting that the United States government send to Managua a commission to arrange for the settlement of all differences. In accordance with this request, Thomas C. Dawson, the newly appointed Minister to Panama, was designated as American commissioner to proceed directly to Managua. Among the important matters discussed was the punishment of those persons who were responsible for the killing of Groce and Cannon. Objection to the election of Dr. Mendoza to the vice-presidency of Panama caused considerable ill feeling in the latter country and rumors were industriously circulated that Panama was to be annexed to the United States. During the President's visit to the Panama Canal in November he was given a dinner by Acting President Arosemena, at which he took occasion to put a stop to these rumors. He declared that the treaty between the two countries made the United States the guarantor of the integrity of the Republic of Panama and therefore in a sense the guardian of the liberties of her people. He declared further that the United States had no desire to add further to the territory under its jurisdiction except as the operation of the canal might require. A boundary dispute between *Costa Rica* and Panama was settled in August when the former approved a protocol drawn at Washington through the offices of the United States State Department providing for arbitration of disputes between the two countries by the Chief Justice of the United States Supreme Court. Upon his return from the inspection of the Panama Canal in November, President Taft stopped in *Cuba* and was the first American President to honor the Cuban Republic in this manner. Mr. Taft landed at Guantanamo from the United States cruiser *Tennessee* on November 19.

The Orinoco Steamship case, which was the final subject for dispute with the Republic of *Venezuela* was decided by The Hague Tribunal to which it had been referred (see INTERNATIONAL ARBITRATION). The Alsop claim controversy with *Chile* which has pended for many years and which had been referred to King Edward as arbitrator previous to his death was transferred to his son, King George.

The boundary dispute which threatened war between *Peru* and *Ecuador* was referred to The Hague Convention as a result of the mediation of the United States, Brazil and Argentina. During the year *Argentina*, *Chile* and *Mexico* celebrated the one hundredth anniversaries of their independence and representa-

tives were sent by the United States government to take part in these celebrations. Considerable feeling was developed in Mexico as a result of the lynching of a Mexican, Antonio Rodriguez, at Del Rio, Texas, on November 2. Rodriguez had shot and killed the wife of a ranchman whom he had asked for food and whose reply to his request he did not like. He was promptly captured and placed in the jail at Rock Springs. On November 3, the ranchmen of the vicinity broke into the jail, took him out and burned him at the stake. Several newspapers published in the City of Mexico printed inflammatory articles when the news reached the capital and on the night of November 8 there were riotous demonstrations against the Americans. The riots continued on the following day when windows were broken and an American flag was pulled down and torn to pieces, and a car containing American children was stoned. The son of the American Ambassador was assaulted. Mr. Wilson, the Ambassador, protested, declaring that the police were not endeavoring to protect him and other Americans. The Mexican Minister at Washington protested to the United States government against the burning of Rodriguez and asked for reparation. The government requested the governor of Texas to make thorough inquiry. The Mexican Minister of Foreign Affairs called upon Minister Wilson expressing his regret and promising that that offending newspapers should be suppressed. On the night of November 10, however, mobs in the city of Guadalajara filled the streets crying "Death to the Americans." They broke the windows of American banks and stores and burned an American flag. On the same night the office of the American Consul in Ciudad Porfirio Diaz, across the river from Eagle Pass, Texas, was wrecked by the mob and the records of the office were destroyed. In Guadalajara on the night of November 11, Carlos B. Carothers, an American, while defending his home against the mob, shot and killed a Mexican boy. He surrendered to the authorities and was lodged in jail. The police and soldiers attempted to quell the riots and many rioters were arrested. On November 11, Minister Wilson telegraphed that the Mexican government was using its best efforts to preserve order and protect Americans. Secretary Knox issued a statement expressing regret for these occurrences and declared that at no time had the governments and people of the two countries sustained toward each other closer and more cordial relations than at the present time. He declared it most unfortunate that the brutal crime in the United States, of which a Mexican was the victim, should be an excuse for a demonstration of hostility toward Americans in Mexico. He said, "It is a satisfaction to believe that such demonstrations find little sympathy in the body of the Mexican people and none in the Mexican government. I am sure that the Mexican government will be swift to put down all hostile demonstration against Americans in Mexico and to punish those engaged in them, as this government will be prompt to press for the punishment of persons guilty of crimes against citizens of Mexico residing in this country." A man was sent by the Mexican government to Texas to investigate the lynching of Rodriguez and local authorities

were requested by the governor of Texas to assist them in their labors. The assertion was made that Rodriguez was not a Mexican citizen, but was a native of New Mexico and had voted there. The Mexican officer who investigated the lynching reported that resident Mexicans had taken part in it and had publicly expressed their approval of it. He declared it to be his opinion that Rodriguez was either an insane person or a fugitive from justice. He is said to have confessed before his death that he had recently murdered and robbed two Mexicans.

Relations with *Canada* were of unusual interest during the year as a result of negotiations for an agreement on the minimum tariff rates, and for a reciprocity agreement. See **TARIFF**, and **CANADA**. The settlement of the fisheries dispute with *Newfoundland* by The Hague Tribunal was the most important event in the history of arbitration in many years. A detailed account of this will be found in the article **ARBITRATION**. On May 5 Secretary Knox and Ambassador Bryce exchanged ratifications of a new waterway treaty with Canada, and on May 22 a treaty between the United States and Canada settling the coast boundary between Maine and New Brunswick was signed.

The chief diplomatic relations with European countries were concerned with the negotiations regarding a minimum tariff rate. These are discussed in the article **TARIFF**. As a result, agreements had been made with most of the countries of Europe at the end of the year. A preliminary diplomatic agreement was reached with *Great Britain* regarding the arbitration of pecuniary claims which each government has against the other.

The republic set up in *Portugal* as a result of the overthrow of the monarchy was formally recognized by the United States for the purpose of ordinary intercourse pending formal recognition by the Powers. During disturbances which resulted from the strike in Berlin, *Germany*, several newspaper correspondents were injured by German police officials. Complaints were made by the State Department on October 12 and the German Foreign Office expressed regret for this attack. A special Ambassador was sent to *Turkey* to return the visit of the special Embassy announcing the accession of Mohomet V., the Ottoman sultan. On August 31 Turkey granted to American religious, educational and benevolent institutions exemption from the Ottoman law and permitted them to hold land. The new kingdom of *Montenegro* was formally recognized by the United States.

The scene of interest in affairs in the Far East during the year was in *China*. Negotiations for a loan to the Chinese government for the construction of the trunk railway lines from Hankow southward to Canton and westward through the Yangtse Valley, known as the Hukuang loan, were concluded by representatives of the various financial groups in May, and the results were approved by the representative governments. The basis of the settlement of the terms of this loan was one of exact equality between America, Great Britain, France and Germany in respect to financing the line and supplying the materials for the proposed railways and their future branches.

In December, 1909, Secretary Knox com-

municated to the governments of China, Japan, Russia, Great Britain, France and Germany a proposal that the railroads of Manchuria be turned over to China and placed in the hands of a national syndicate, which should develop them for commercial instead of political purposes, thus insuring the neutrality of this region. In the note, which was made public on January 5, 1910, Mr. Knox explained that the American government made this proposal in accordance with the policy inaugurated by the late Secretary Hay for the maintenance of the "open door" in Manchuria. The Secretary declared that such a vesting in China of the ownership of its railroads would have great international advantages. In concluding his proposal he noted the fact that an Anglo-American syndicate had obtained a concession for a railway connecting Aigun in northern Manchuria with Chin-Chowfu, farther to the south and that the British and American governments intended to support this concession diplomatically. Late in January, 1910, it was announced that the Chinese foreign board had refused to accept Secretary Knox's proposition, and on January 21 the Japanese and Russian governments in notes handed to the American Ambassadors at Tokio and St. Petersburg declined to assent to Secretary Knox's proposal.

Relations with *Japan* were uniformly friendly during the year. On communicating to the United States the fact of the annexation of Korea, the Japanese government gave assurance of the full protection of the rights of American citizens in Korea under the changed conditions. During the year the Secretary of War visited Japan and China in connection with his tour to the Philippines. Friendly visits of many distinguished persons from the Far East were made to the United States in 1910. Chief among these were Their Imperial Highnesses Princes Tsai-tao and Tsai-Hsun of China; and His Imperial Highness Prince Higashi Fushimi and Prince Tokugawa, President of the House of Peers of Japan.

**UNITED STATES CENSUS.** The Census of 1910, the thirteenth taken in the history of the government, was made in accordance with a law passed on July 2, 1909. Two bills were passed, at that time, one of which appropriated \$10,000,000 for taking the census, while the other presented qualifications of the census takers. In the winter of 1908, President Roosevelt had vetoed a bill which provided for the taking of the census, but which omitted to provide for the appointment of the clerks and other employes by competitive examination under the Civil Service. In the final bills passed, as noted above, this defect was remedied. In order that the employes might not be composed disproportionately of persons who live in the District of Columbia, it was provided that the appointees selected for the work must actually have lived for at least one year in the State from which they were named.

On May 26, 1909, E. Dana Durand of California was appointed Director of the Census to succeed S. N. D. North, who had resigned.

**SCOPE AND METHODS.** The scope and method of the Thirteenth Census differed in several respects from that of the Twelfth. First, the inquiry of the Twelfth Census relative to deaths was dropped, as more accurate, though less com-

prehensive, statistics may be secured by compiling the results of the current registration of deaths; second, the enumeration of population and agriculture was of the date April 15 instead of June 1 as in the census of 1900; third, a complete system of Civil Service examinations was provided for the appointment of temporary clerical help; fourth, a few minor changes in the scope of the inquiries concerning population, agriculture and manufactures were made by the Census Act. The most important of these was an amendment passed in March, 1910, whereby an inquiry was added regarding the mother tongue of persons born abroad, or of the foreign-born parents of persons born in the United States. Another important change in the schedule, although not required by law, was the addition of an inquiry concerning the industry in which the person was engaged, as well as the specific occupation pursued.

**POPULATION.** The schedules relating to population included for each inhabitant the name, relationship to head of family, color, sex, age, conjugal condition, place of birth, place of birth of parents, number of years in the United States, occupation, whether or not employer or employe, and if employe, whether or not employed at the time of enumeration and the number of months unemployed during the preceding calendar year, whether or not engaged in agriculture, school attendance, literacy and tenure of home, and whether or not a survivor of the Union or Confederate army or navy; the name and address of each blind or deaf and dumb person. The enumeration of institutions shall include paupers, prisoners, juvenile delinquents, delinquents, insane, feeble-minded, blind, deaf and dumb, and inmates of benevolent institutions.

**AGRICULTURE.** The schedules relating to agriculture included name, color and country of birth of occupant of each farm, tenure, acreage of farm, acreage of woodland and character of timber thereupon, value of farm and improvements, value of farm implements, number and value of livestock on farms and ranges, number and value of domestic animals not on farms and ranges and the acreage of crops planted and to be planted during the year of enumeration, the acreage of crops and the quantity and value of crops and other farm products for the year ending December 31 next preceding the enumeration.

**MANUFACTURES AND MINING.** The schedules of inquiries relating to manufactures and of mines and quarries included the name and location of each establishment; character of organization, whether individual, coöperative or other form; character of business or kind of goods manufactured; amount of capital actually invested; number of proprietors, firm members, co-partners, stockholders and officers and the amount of their salaries; number of employes and the amount of their wages; quantity and cost of materials used in manufactures; amount of miscellaneous expenses; quality and value of products; time in operation during the census year; character and quantity of power used and the character and number of machines employed.

**ENUMERATION.** The work of enumerating the population which was begun throughout the country on April 15, required a force of 70,000 enumerators under the direction of 330 supervisors. The enumerators averaged about one

to each 1300 inhabitants. The enumeration of cities was completed by May 1, and the figures outside of cities on May 15. To tabulate the returns gathered by these enumerators about 3500 clerks were employed.

The inquiry relating to the nationality of foreign-born citizens determined by the mother tongue was the most important change in the population schedule. This inquiry was supplemental to the previous inquiry of the country of birth. As a large part of the immigration to the United States during recent years has been from countries which contained a highly composite population, for example, Austria-Hungary and Russia, it was deemed unfair to report under one head all persons born in such countries without distinguishing radically different nationalities. This was brought about by the use of the inquiry regarding the mother tongue.

Great care was used by the Director of the Census to secure as large a degree of intelligence as possible in the enumerators. More than 200,000 candidates took examination for these places. Papers were rated by the supervisors of the various districts, and the papers of those recommended for appointment were again examined in Washington.

**TABULATION.** To tabulate the great mass of population statistics within a reasonable length of time would be practically impossible were it not for the invention of machines for this purpose. Machines used in the Census of 1910 were in general principles similar to those used in 1900, but great improvements were made so that the work could be done much more cheaply and rapidly than in the previous years. An elaborate card system was employed. For each of the approximately 90,000,000 persons enumerated a separate card was prepared. By running these cards through tabulating machines equipped with special electrical devices facts regarding the population were recorded in any desired series of combinations. About 300 of these machines were operated day and night during the process of enumeration. Each clerk was able to turn out from 1500 to 2000 cards in seven hours.

More complicated than the simple enumeration of the population was the task of counting its characteristics. This was done by tabulating machines. In order to avoid the use of too large a number of counters on the tabulating machines or the necessity of running the cards through these machines an excessive number of times the cards themselves were first sorted according to the principal classifications such as sex, color and nativity. Separation by sex was made automatically by the operation of punching machines. Other separations were made by passing the cards through electrical sorting machines, holes in the cards determining into what groups they should go.

**PUBLICATION OF RETURNS.** As it was important that the first facts published as a result of the census should relate to the total population in each State and in each community, special efforts were made to secure these figures as early as possible. Final figures for the population of each State were known about October 1st, and in many cases the data for the individual States and cities had been published previous to that date.

Some information regarding the most important subjects covered by the population census

in addition to those given in the tables below will be available sometime in 1911. This will cover the most important and generalized facts with regard to sex, color, race, general nativity, country of birth, citizenship, illiteracy and school attendance. Following this the subjects of age distribution, conjugal condition, length

of residence in the United States on the part of the foreign born, ability to speak English, occupations, and unemployment will be taken up, but no material concerning them will be available before the end of 1911, and in the case of occupations hardly before May or June, 1912.

TABLE I.—POPULATION OF THE UNITED STATES—TOTAL AREA OF ENUMERATION, CONTINENTAL UNITED STATES, AND NONCONTIGUOUS TERRITORY: 1910 AND 1900.

	1910	1900
The United States (total area of enumeration).....	93,402,151	1 77,256,630
Continental United States.....	91,972,266	75,994,576
Noncontiguous territory.....	1,429,885	1,262,055
Alaska .....	64,356	63,592
Hawaii .....	191,909	154,001
Porto Rico.....	1,118,012	2 953,243
Persons in military and naval service stationed abroad.....	55,608	91,219
<sup>1</sup> Includes 953,243 persons enumerated in Porto Rico in 1899.		
<sup>2</sup> According to the census of Porto Rico taken in 1899 under the direction of the War Department.		

With reference to agriculture, it is expected that about June or July, 1911, the principal tabulations showing the number of farms, acreage, value of property, number of animals, the different classes of acreage and yields of the principal crops will be completed. The figures dealing with certain individual States have already been issued. The more analytical presentations of the same classes of facts showing for example the acreage and value of farms of different sizes or farms of different tenures will require a somewhat longer time for preparation. The statistics of minor crops and farm products, including dairy products and the like, will, it is expected, be completed by the end of 1911. In the case of manufactures, the totalization of the general statistics for the United States by States and by industries will probably be finished by the middle of 1911. More detailed critical analyses of the same figures, together with presentations of the special statistics peculiar to individual industries, will be issued later. It is expected that they will be completed about June 30, 1912.

Aside from these main subjects the Census Bureau will publish as the result of the census, statistics of irrigation, on persons in institutions (criminals, insane, paupers and the like) and on the deaf and blind. Very little of this material will be available much before June 30, 1912.

At the end of the year Congress had appropriated \$12,000,000 for the expenses of the census and it was estimated at that date that a further appropriation of about \$3,000,000 would be necessary before the completion of the work.

POPULATION IN 1910. The Thirteenth Census of the United States was taken by the Bureau of the Census as of April 15, 1910. The total area enumerated includes continental United States, the territories of Alaska and Hawaii, and Porto Rico. The enumeration also includes persons stationed abroad in the military and naval service of the Government, who were specially enumerated through the cooperation of the War and Navy Departments.

Table I is a complete population statement for the area enumerated in 1910, distinguishing continental United States, Alaska, Hawaii, Porto Rico, and military and naval. The last four classes are grouped together under the

head of "Noncontiguous territory." The corresponding figures of the Twelfth Census of 1900 are also given for purposes of comparison.

The rate of increase from 1900 to 1910 was 20.9 per cent. for the total area of enumeration and 21 per cent. for continental United States. It will be noted that Table I does not cover other possessions of the United States than the ones mentioned. Including the population of Philippine Islands as enumerated by the census of 1903 under the direction of the War Department, 7,635,426, and adding estimates for the islands of Guam and Samoa and the Canal Zone, the total population of the United States and possessions is about 101,100,000.

TABLE II.—POPULATION OF CONTINENTAL UNITED STATES AND DECENNIAL INCREASE—NUMBER AND PER CENT: 1790 TO 1910.

Census	Total Population	Increase since preceding census	
		Number	Per cent
1910 .....	91,972,266	15,877,691	21.0
1900 .....	75,994,576	13,046,861	20.7
1890 .....	62,947,714	12,791,931	25.5
1880 .....	50,155,783	11,597,412	30.1
1870 .....	38,558,371	7,115,050	22.6
1860 .....	31,443,321	8,251,445	35.6
1850 .....	23,191,876	6,122,423	35.9
1840 .....	17,069,453	4,203,433	32.7
1830 .....	12,866,020	3,227,567	33.5
1820 .....	9,638,453	2,398,572	33.1
1810 .....	7,239,881	1,931,398	36.4
1800 .....	5,308,483	1,379,269	35.1
1790 .....	3,929,214	.....	....

Table II relates to continental United States only. There is given the population as enumerated at each census from 1790 to 1910, together with the number and per cent. of increase for each decade since 1790.

Table III gives the population of continental United States for each census from 1890 to 1910, by States. The States are grouped according to their geographical location into nine main divisions—New England, Middle Atlantic, East North Central, West North Central, South Atlantic, East South Central, West South Central, Mountain and Pacific. There is also given the number and per cent. of increase for each division and each State during the two decades since 1890, and the ranking of the States as to total population in 1910 and 1900.

TABLE III.—POPULATION OF CONTINENTAL UNITED STATES, BY STATES, 1890 TO 1910, WITH NUMBER AND PER CENT. OF INCREASE, 1890-1900 AND 1900-1910; ALSO RANKING OF THE STATES IN 1910 AND 1900.

State	Population		Increase from 1900 to 1910		Rank in population 1

1 Hawaii and Alaska, which do not appear in this table, rank as 48 and 51, respectively, both in the ranking for 1910 and 1900.

2 Total population, including population of Indian Territory and Indian reservations, which were specially enumerated in 1890.

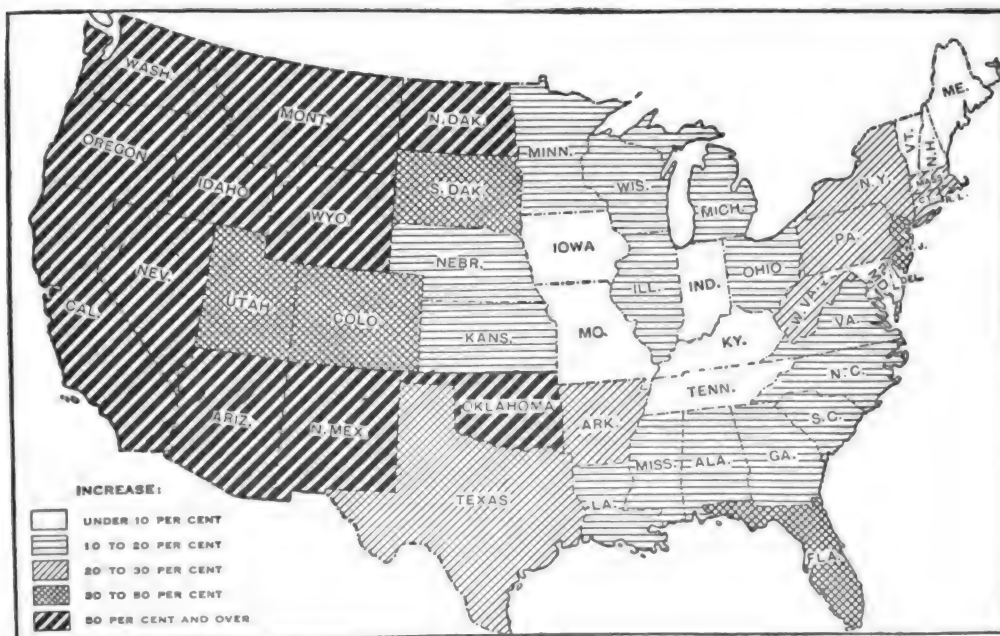

3 Decrease.

DENSITY OF POPULATION. Density figures for 1910, 1900, and 1890 are shown in Table IV. This table gives the population per square mile of land area for each State and territory, in each

of the three census years named. The States are arranged in the table in the order of the density of their population in 1910.

TABLE IV—POPULATION PER SQUARE MILE, BY STATES: 1910, 1900, AND 1890

States	1910	1900	1890	States	1910	1900	1890

MAP CLASSIFYING STATES WITH RESPECT TO THE PERCENTAGE OF INCREASE OF POPULATION 1900 TO 1910.

4 Includes the population of Indian Territory, which was 392,060 in 1900 and 180,182 in 1890.

5 The territory of Oklahoma in 1900 ranked 38 and Indian Territory 39. The present ranking for 1900 includes the population of Indian Territory with that of Oklahoma.

TABLE V—POPULATION OF CITIES. Table five gives the Population of cities of 25,000 and over.

City	Population			Per cent of increase	
	1910	1900	1890	1900 to 1910	1890 to 1900

<sup>1</sup> Decrease.

<sup>2</sup> Estimated population in 1890 of the area of present New York. The population of New York as it existed in 1890 was 1,515,301.

<sup>3</sup> Includes population of Allegheny, which was, in 1900, 129,896, and in 1890, 105,287.

<sup>4</sup> Incorporated since 1890.

The total number of cities having a population of 25,000 and over in continental United States is 228—50 of which have a population of 100,000 or more, and 178 of which a population of 25,000 to 100,000 inhabitants. These cities are given above, with comparative data for 1900 and 1890, together with the percentage of increase for each of the past two decades. Fourteen cities of those included in this list have risen above the 100,000 limit since 1900, namely, Albany, N. Y., Atlanta, Ga., Birmingham, Ala., Bridgeport, Conn., Cambridge, Mass., Dayton, Ohio, Grand Rapids, Mich., Lowell, Mass., Nashville, Tenn., Oakland, Cal., Portland, Oreg., Richmond, Va., Seattle, Wash., and Spokane, Wash. The city of Allegheny, Pa., which was annexed to Pittsburg in 1907, is not included in the list, and the population in 1890 and 1900 is added to that of Pittsburg.

Of the 50 cities of over 100,000, 34 made a greater absolute increase of population during the decade of 1900 to 1910 than during the preceding decade, and 24 made also a greater percentage of increase.

Although the rates for individual cities vary widely, ranging from 6.5 per cent. in the case of Albany, N. Y., to 245.4 per cent. in the case of Birmingham, Ala., it is rather noteworthy that there are 10 important cities which show approximately the same rate of increase during the last decade, viz., Boston (19.6 per cent.), Buffalo (20.2 per cent.), New Orleans (18.1 per cent.), Omaha (21 per cent.), Paterson (19.4 per cent.), Philadelphia (19.7 per cent.), Pittsburg (18.2 per cent.), St. Louis (19.4 per cent.), San Francisco (21.6 per cent.), and Washington (18.8 per cent.).

It should be remembered that in some instances, in the table above, the growth of a city may have been due in part to annexation of suburban territory. Except in the cases of New York and Pittsburg, no allowance has been made for such annexation.

There are now 19 cities having over a quarter of a million inhabitants, 4 of which—Newark, Los Angeles, Minneapolis, and Jersey City—have entered this group since 1900. The rank of the 5 greatest cities has remained the same for twenty years. Seven cities have advanced in rank since 1900; 3 of these—Cleveland, Detroit, and Milwaukee—are situated on the Great Lakes. The greatest advance in rank is shown by Los Angeles, which ranked forty-fourth in 1890, thirty-fourth in 1900, and seventeenth in 1910.

About one-third (69 out of 228) of the cities in continental United States show an increase of over 50 per cent. from 1900 to 1910. Of the northern cities, about one-fifth (35 out of 164) show such an increase; of the southern cities, about two-fifths (18 out of 43); and of the western cities, about three-fourths (16 out of 21).

Of the 22 cities which have more than doubled their population during the past decade, 10 are in the West, 8 in the South, and 4 in the North. Following is a list of the 22 cities, together with their population in 1910 and the rate of increase. The list is arranged in descending order of rate of increase.

TABLE VI—HIGHEST PER CENT. OF INCREASE.

	City	Population 1910	Rate of increase

## TOWNS AND CITIES UNDER 25,000

The following table gives the population of cities and towns of 5000 and above, and of less than 25,000 in population in 1900 and 1910. The list is for thirty-nine of the States only, as at the time of its preparation figures were not available for all the States and Territories.

**UNITED STATES MILITARY ACADEMY.** A government institution at West Point, N. Y., founded in 1802 for the instruction of military officers. By law 533 cadets are authorized to attend the academy. In 1910 there were 416 cadets at the Military Academy, as compared with 411 on the corresponding date for the previous year. Included in this number were two from Cuba, one from Costa Rica, one from Ecuador and one from Venezuela. The corps of cadets is far below its present authorized strength of 533, but will be materially increased by an indeterminate addition under an act approved April 19, 1910, which provides that for a period of six years from July 1, 1910, whenever any cadet shall have finished three years of his course in the Military Academy a successor may be appointed. In September, 1910, there were 122 vacancies for the appointment of cadets. These vacant cadetships, together with 179 additional cadetships that will be open to appointment in 1911 and 1912, are to be filled by the appointment of cadets who are found qualified at the examination to be held in January, 1911. The superintendent and commandant in 1910, Col. Hugh L. Scott, was succeeded during the year by Major-General Thomas H. Barry.

**UNITED STATES NATIONAL MUSEUM.** An institution which originated by an act of Congress of 1846 founding the Smithsonian Institution. It is the official custodian of the national collections and its expenses are entirely provided for through appropriations made by Congress. The chief events in the history of the museum during 1910 were connected with the erection and occupation of its new building. By the end of the year practically all of the building except the interior of the south pavilion and the granite approaches had been structurally finished. The museum contains the national gallery of art. The collections gathered by Theodore Roosevelt in his expedition under the auspices of the Smithsonian Institution are lodged in the museum. (See SMITHSONIAN INSTITUTION.) There were important accessions in the departments of ethnology, entomology and technology during the year. The assistant secretary in charge of the museum is Richard Rathbun.

**UNITED STATES NAVAL ACADEMY.** A government institution at Annapolis, Md., founded in 1845, for the education of officers for the United States Navy. The attendance in 1909-10 was 360, and the instructors numbered 96, with 11 heads of departments. In 1909 the construction of the new buildings of the academy was completed at a cost of over \$10,000,000. Since 1905 the remains of John Paul Jones have been at the Naval Academy without an appropriate mausoleum, and attempts have been made for the passage of a bill through Congress for an appropriate resting-place, but these have failed. The Secretary of the Navy recommends the appropriation of \$135,000 for this purpose. He also recommends the passage of a law providing for pensions for midshipmen injured or incapacitated while serving two years probationary service after leaving the Naval Academy. The Superintendent in 1910 was Captain John W. Bowyer, and the Commandant was Captain C. A. Gove.

**UNIVERSALISTS.** A religious denomination first established in the United States at Gloucester, Mass., in 1799. Its distinctive tenet

is the final salvation of all men. According to the religious census made by the United States government in 1906 and published in 1910, the total membership of the denomination in 1906 was 64,158 with 768 churches and 724 ministers. The value of the church property is \$10,575,056. According to the official statistics of the denomination there were in 1910 about 54,000 communicants, 904 parishes and 689 ministers. The Sunday schools had a membership in that year of about 50,000 and the parish property was valued at about \$11,000,000. The parish expenses and contributions during the year amounted to \$1,250,954. The permanent funds of the General Convention amounted to \$392,466. The denomination carries on foreign missions in Japan and Cuba and domestic missions are sustained in fifteen States. Its educational institutions include Tufts College at Medford, Mass., St. Lawrence University at Canton, N. Y., Buchtel College at Akron, O., and Lombard College at Galesburg, Ill. It has also among its literary foundations Dean Academy at Franklin, Mass., Goddard Academy at Barre, Vt., and Westbrook Seminary near Portland, Me. Delegates of the denomination attended the International Council of Religious Liberals in Berlin in August, 1910. The next session of the General Convention will be held in Springfield, Mass., in October, 1911.

#### UNIVERSITIES AND COLLEGES.

**STATISTICS.** The report of the United States Commissioner of Education issued in March, 1910, for the year ending June 30, 1909, listed 606 universities, colleges and technical schools with a teaching force of 26,369 and an enrollment of 308,163 students in all departments. Of these institutions 89 controlled by States and cities had an enrollment of 62,972 collegiate and 2807 graduate students, comprising 49,218 men and 16,561 women, a total of 65,779. The 517 institutions controlled by private corporations had 66,051 men and 44,678 women collegiate students and 4946 men and 2433 women graduate students, a total of 117,565, excluding preparatory and professional students. The 144 institutions for men only had 33,651 undergraduates.

**WOMEN'S COLLEGES.** The 113 institutions for women only, included 16 chief institutions with 358 men and 584 women teachers, a total of 942; and 142 preparatory, 8264 collegiate and 194 graduate students, a total of 8610. These institutions conferred 1539 degrees, had 379,532 volumes in their libraries, \$1,107,878 in furnishings, \$3,635,807 in grounds, \$11,457,142 in buildings, \$13,494,953 in productive funds, and total receipts during the year of \$4,227,362. The other 97 institutions for women had only 1744 teachers, 19,344 students, conferred 942 degrees, had 281,181 volumes in their libraries, \$874,122 in furnishings, \$3,193,091 in grounds, \$9,324,298 in buildings, \$1,427,471 in productive funds, and total receipts during the year of \$3,090,445. That is, the collective resources of the 16 chief institutions for women exceeded those of the lesser 97 institutions. The 16 chief colleges were Mills, Cal.; Trinity, D. C.; Rockford, Ill.; Newcomb, La.; Goucher, Md.; Simmons, Radcliffe, Smith, Mount Holyoke and Wellesley, Mass.; Wells, Elmira, Barnard and Vassar, N. Y.; Bryn Mawr, Pa., and Randolph-Macon, Va. The 349 co-educational institutions had 79,728 men and 39,847 women undergraduates, a total of 119,575. The 493 institutions for

men and for both sexes had 20,961 men and 2722 women teachers, a total of 23,683. Of these 3990 were in preparatory, 13,648 in collegiate and graduate, and 6507 in professional departments. These 493 institutions enrolled 204,301 men and 75,908 women, a total of 280,209 including 64,001 preparatory, 153,226 collegiate, 9449 graduate, 37,149 professional, and 16,384 special students. Of the undergraduates 36,347 were in classical courses, 14,636 in general science, 65,110 in agriculture, 31,748 in engineering, 7224 in education, 5405 in commerce, 3316 in household economy, 6868 in music and 2212 in art.

**RESOURCES.** These institutions reported property amounting to \$603,102,969, libraries of 13,338,230 volumes, apparatus valued at \$33,756,034, grounds at \$67,161,996, buildings at \$219,997,873, productive funds at \$260,736,969. The aggregate receipts during the year were: \$76,650,969, \$19,178,953 from fees, \$10,948,702 from endowments, \$20,731,775 from city, State, and Federal government, and \$16,470,745 from private gifts. Twenty-one institutions had from one to two million dollars endowment, 9 from two to three million, 2 from three to four, 5 from four to five, and 7 had over ten million. The total number of degrees conferred in course upon men was 16,623, including 6450 of A. B., 4632 of B. S., 1370 of A. M., 677 of C. E., 515 of M. E., and 374 of Ph. D. The number of degrees conferred in course upon women were 7909, including 5361 of A. B., 787 of B. S., 423 of A. M., and 47 of Ph. D. Honorary degrees were granted to the number of 867.

**PROFESSIONAL SCHOOLS.** Fifty-two agricultural and mechanical colleges enrolled 72,865 students, an increase of 4026 over the year preceding. Of the total, 28,717 were in college departments, 11,203 in short and special courses, 6907 in preparatory departments, and 6766 were colored students in 16 separate institutions. Of the students of college grade 17,435 were in engineering and related subjects, 5873 in agriculture and 1443 in domestic science. The students in short and special courses represented an increase of 2455 or 28 per cent. over the preceding year. These institutions possess equipment valued at \$67,008,219, endowment of \$46,283,779 and income of \$18,595,893. The statistics of other professional schools included 162 schools of theology with 1350 instructors, 10,218 students—an increase of 635—1775 graduates in 1909, equipment valued at \$19,766,100, endowments of \$32,024,000, and an annual income of \$3,119,300. In medicine 144 schools reported 7957 instructors, 22,158 students—a decrease of 629—4484 graduates in 1909, equipment valued at \$12,583,981, endowments of \$3,468,734, and an annual income of \$1,843,518. In law 109 schools had 1343 instructors, 18,553 students—an increase of 484—3761 graduates in 1909, equipment of \$3,169,500, endowments of \$808,100, and an annual income of \$1,191,300. There were 412 women students of theology and 188 in law. There were 78 schools of pharmacy with 802 instructors and 5999 students—an increase of 432—equipment valued at \$914,500, endowments of \$252,278, and an annual income of \$236,920. There were 55 schools of dentistry with 1609 instructors, 6178 students—a decrease of 341—equipment of \$1,333,031 and an annual income of \$440,293. There were 19 veterinary schools with 373 instructors, 2677 students—an increase of 438—equipment valued at \$907,000 and an an-

nual income of \$187,774. The United States Department of Agriculture's regulations for examinations for veterinary inspector (September 1, 1909) are producing a practical standardization of schools. There were also 7809 students in training courses for teachers in 102 universities and colleges. Of colored men in collegiate courses there were 2885, of women 1300.

**INTERNATIONAL REGULATIONS.** Eighty-three Rhodes scholars from the United States were in residence at Oxford during 1909-10 as compared with 90 during 1908-9. Eighty-three have completed their courses with a good proportion of honor degrees, scholarships and honor examinations, the showing of students from the South and West being especially noticeable. All but one of these graduates have returned to the United States, and many of them have expressed their appreciation of Oxford's academic thoroughness, the recognition of the difference between passable and honorable scholarship, the social life, and the practice of athletics for the sake of the athlete and not the spectator. An International Exchange Bureau in England through popular subscriptions sent ten English university students for a three months tour in 1910 among institutions in Canada and the United States. A smaller group from Oxford made a similar tour independently. The University of Oxford announced the establishment of a lectureship at Oxford on American institutions by American scholars selected with the advice of an advisory committee representing American universities.

**CARNEGIE FOUNDATION.** The Fourth Annual Report of the Carnegie Foundation appearing in February, 1910, announced the granting of 115 new pensions at an annual cost of \$177,000, thus increasing its total payments to 318 pensions amounting to \$466,000 annually. The recipients represent 139 different institutions. Seven institutions were added to the Foundation's list: Coe College, Iowa; Swarthmore College, Pa.; the State Universities of Michigan, Minnesota, Missouri and Wisconsin; and the University of Toronto. The Randolph-Macon Woman's College withdrew from the list for denominational reasons, and the Foundation withdrew the George Washington University, charging that it had impaired its endowment and had arbitrarily dismissed two professors. These changes made the number of accepted institutions 67. In June Wesleyan University was added, without losing its privilege of having a certain number of its trustees elected by denominational bodies. The same report summarized the working of the retiring allowances and announced amendments of their rules, counting service in the rank of instructor toward retirement, making retirement after twenty-five years service but before the age of sixty-five possible only in the case of disability, but retaining the provision for pensioning the widows of professors of sixty-five years of age or of twenty-five years' service. These changes were based on the inadequacy of the Foundation's endowment (now of \$16,000,000), the growth of institutions, the increase of salaries, and the experience that retirement on the basis of age was frequently distasteful to the professor and the result of administrative pressure. Although the Foundation had regularly announced its right to alter its rules at any time, these changes were the occasion of charges of financial mis-calculation and ethical misleading of those who

were announced to be entitled to service pensions. Other criticisms continued to be directed to the Foundation's encouragement of undenominational control of educational institutions and its increasing influence over educational policy.

The remainder of the report and two special bulletins issued in June and in December constituted, as hitherto, the most conspicuous educational publications of the year. Concerning tax-supported institutions, the report dwelt upon agricultural education and the unfortunate results of competition between State universities and schools of agriculture. The functions of trustees, administrators, financial reports and college advertising and the further adjustment of high school and college and of higher education with public education in general, were suggestively studied.

**BULLETIN ON MEDICAL EDUCATION.** The fourth Bulletin of the Foundation, appearing in June, discussed "Medical Education in the United States and Canada." Written by Dr. Abraham Flexner and introduced and approved by President Pritchett, it surveyed our medical history from a generation ago, when no medical school required more than eight months to graduate a student of no preliminary education with a degree that was a license to practice in any State, traced the rise and decline of proprietary schools, and indicated the introduction of new ideals with the founding of the Johns Hopkins Medical School in 1893, until at present our best hospitals and surgery are admired by Vienna itself. A study of the present condition of our 155 medical schools indicated, however, that the resources, requirements, staff and facilities of most of them are inadequate and that they are training poorly and graduating two or three times as many physicians as can be assimilated by the population. Specific and severe criticism of particular conditions,—such as State connivance at low standards, the conflict for clinical facilities in New York, the violation of entrance provisions in Chicago, the examination for license of non-graduates in Massachusetts—was followed by a comprehensive scheme for improvement. Holding that a medical school is properly a university department and most favorably located in a large city where clinical material is abundant and various, that local competition should be succeeded by amalgamation or coöperation, that local provision should be adequate in each group of States, and that the present annual output of four or five thousand graduates should be reduced to 2000 or one to every 1500 citizens, of report proceeded to select and locate the 31 necessary medical schools. For New England, Harvard and Yale could supply the demand, although Dartmouth and Vermont might continue to offer the work of the first two years. For the middle States, New York, Philadelphia and Baltimore should abolish their inferior schools and merge the better and those of Syracuse and Pittsburg should be developed. For the South the development of Tulane and Vanderbilt, and the Universities of Texas, Georgia, Alabama and Virginia would be adequate. For the north central States, city schools in Cincinnati, Columbus, Cleveland and Chicago and others at the Universities of Michigan, Wisconsin and Indiana. For the middle west, Minneapolis and St. Louis and the Universities of Nebraska, Kansas and Iowa. The farther west would be adequately supplied by the Universities of Utah and Colorado, the Pacific coast by

the University of California and, later, the University of Washington. Of the medical schools thus selected, 19 are in large cities, 8 in large towns near universities, 4 are parts of universities in small towns. Of the 124 schools that are considered unnecessary some would survive through merger and 66 are negligible, having less than 100 students each. The selected 31 could serve every region and produce twice as many doctors as the country now needs with twice as good training as the present average.

This report met with immediate and marked response, varying from at least one suit for damages to frank acknowledgment of inefficiency and the closing of other institutions. The medical schools of Ohio Wesleyan and Western Reserve universities in Cleveland merged, gifts of between five and six million dollars were reported for the medical department of Washington University, St. Louis; and Columbia University, which last year received \$1,600,000 for medical research, received \$1,000,000 additional for medical buildings and the control of a new hospital adjoining the Rockefeller Institute for Medical Research, the assets of which were increased to \$8,000,000 at the opening of its new hospital in October.

**BULLETIN ON ACADEMIC EFFICIENCY.** The Fifth Bulletin of the Foundation, appearing in December, presented a study of "Academic and Industrial Efficiency" by M. L. Cooke, a specialist in industrial organization. He examined the cost at Harvard, Columbia, Princeton, Massachusetts Institute of Technology, the Universities of Toronto and Wisconsin and Williams and Haverford Colleges of teaching and research in physics, which was selected as a typical subject including lecture, recitation and laboratory work. Some fifty pages of tables presented the value of equipment, the cost of maintenance, and the annual expenditure; the training, salaries, and time distribution of teachers; the use of rooms and the size of classes, an analysis of the cost of research and teaching per student-hour; and suggested forms for an analysis of teaching and expense. The value of the report as a study of quantity rather than quality is frankly limited, but its discussion of the value of uniformity, centralization, standardization and similar financial and administrative matters, of expert rather than military or committee management, of the adoption of some unit like the student-hour as a measure of cost and efficiency, and of a board in each institution for the organization and supervision of research are suggestive.

**GENERAL EDUCATION BOARD.** The General Education Board at its seventh annual meeting in February appropriated \$450,000 toward endowment for seven institutions: Brown University Women's College; Cornell College, Ia.; Georgetown College, Ky.; Salem College for Women, N. C.; St. Lawrence University, N. Y.; Wesleyan University, Conn., and Williams College, Mass. To secure the gift each institution must raise from four to ten times the amount independently. In May the Board similarly appropriated \$682,000 toward endowment for eight institutions: Allegheny College, Pa.; Central University, Ky.; Cornell College, Ia. (additional); De Pauw University, Ind.; Drake University, Ia.; Marietta College, O.; Middlebury College, Vt., and Transylvania University, Ky. Such appropriations for endowments during the last four years amount to \$5,000,000 granted to

70 institutions on the condition of their raising \$18,000,000 independently. At the same meeting the Board granted \$113,000 for agriculture and \$31,000 for secondary education in the southern States. In October the Board granted \$725,000 to six institutions: Amherst College, Mass.; Baylor University, Tex.; Meredith College, N. C.; Trinity College, N. C.; University of Chattanooga, Tenn., and Wesleyan Female College, Ga. The total of these several appropriations for endowment was \$1,857,000 to 21 institutions. In December Mr. Rockefeller set aside from the funds of the Board \$10,000,000 to be paid in ten annual instalments to the University of Chicago with the request that \$1,500,000 be used for a chapel, the remainder for other purposes than endowment. This increase of the donor's gifts during 21 years to \$35,000,000 out of the university's total of \$42,000,000 was stated to be his final contribution and was accompanied by the withdrawal of his personal representatives from the Board of Trustees.

**ASSOCIATION OF AMERICAN UNIVERSITIES.** The Association of American Universities, representing 22 leading institutions, held its eleventh annual meeting in January at the University of Wisconsin. Professor Marx of Leland Stanford presented "The Problem of the Assistant Professor." Of one hundred and twelve assistant professors in twenty leading institutions, mostly in or near large cities, one-fourth were over 40 years of age, indicating the tendency toward a permanent class. Nearly one-half had incurred an average indebtedness of \$885 in pursuing their studies; one-fifth of these had not yet paid. The average length of service was 10.3 years, the average annual salary during that period \$1325, the present average salary \$1790. Three of the number were married, averaging 1.4 children to each family. Four-fifths supplemented their salaries with outside income, averaging one-fourth. Participation in university and departmental work and freedom in teaching seemed general, but so also was excess of elementary work and insecurity of tenure. Ten presidents from the institutions studied reported that while the number of assistant professors had been fairly constant during twenty years, the number of higher officers had decreased and the number of lower officers increased and that the standard for attainment of and promotion from the rank had advanced. Better salaries, academic opportunity and democracy were approved with the hope that increased worth and efficiency would make a class of permanent assistant professors unnecessary, and in general the frankness and agreement of all of the parties to the investigation seemed to the author "full of opportunity and promise." At the same meeting Professor Reber of the University of Wisconsin presented reports from 54 institutions showing that "University Extension" was increasing in the direction of greater consideration for teachers and for students who were not candidates for degrees, and of the development of summer sessions, afternoon, evening and Saturday classes, and of correspondence study. Greater financial support, closer affiliation with the university, and more coöperation with other educational agencies were suggested as desirable. President Wilson of Princeton discussed "The Arts Course," composed of pure science, philosophy, literature, history and politics, as a means to the discipline and enlightenment that should be fundamental to professional study. At the con-

clusion of the meeting definite meanings for the terms *group*, *curriculum*, and *division* were adopted and recommended.

The Association met again in November at the University of Virginia and discussed reports by President Bryan of Indiana University recommending that one year of a professional course be counted toward the degree of Bachelor of Arts, by Professor Thomas of Columbia on "The Degree of Master of Arts," and President Van Hise of the University of Wisconsin on "The Appointment and Tenure of University Professors." The meeting closed with a conference of deans concerning entrance requirements for graduate schools.

**EDUCATION SECTION A. A. A. S.** The Education section of the American Association for the Advancement of Science meeting in Boston during the Christmas recess of 1909-10 heard a vice-presidential address by Professor John Dewey of Columbia on "Science as Method and as Information," criticising the teaching of science as information and holding that it should be presented as method. Professor Thorndike of Teachers College presented arguments for and illustrations of the importance of "Educational Measurements," Professor Judd of Chicago held that "The Experimental Method in Education" should test processes rather than products, and Mr. Sage of the General Education Board discussed the "Geological Location and Sphere of Influence of Colleges in the United States" showing that less than twenty institutions could be considered national, the remainder being strikingly local. Professor Strayer of Teachers College presented special data collected by the Bureau of Education showing that only about 40 per cent. of freshmen continue to graduation, that the medium age for graduation was about 22 years and 8 months, and that the fathers of 19 per cent. of college students were professional, of 22 per cent. were farmers, of 35 per cent. were in trade or commerce, of 9 per cent. were laborers. One-fourth of the student body engage in gainful employment while in college. Joint sessions with the Physics Section and the American Federation of Teachers of the Mathematical and Natural Sciences discussed teaching in those fields. Finally the section adopted specific resolutions condemning very large and very small classes, recommending that course credits have some relation to the class enrollment, and that work for the bachelor's degree be periodically reported in detail to the Bureau of Education.

**DOCTOR'S DEGREES.** The degrees of doctor of philosophy conferred in 1910 were collated, as for twelve past years, by *Science* (August 19). They were 353 in number, as compared with 366, 378, and 387 in 1907, 1908, and 1909 respectively. The largest numbers were conferred by eleven institutions: Columbia (44), Chicago (42), Harvard and Cornell (each 35), Yale (27), Pennsylvania (26), Johns Hopkins (23), Wisconsin (18), Clark (14), Illinois (12), and New York (11). Nineteen other institutions conferred from 1 to 8 each. Half of the total numbers were in the sciences: chemistry, botany, geology, physiology, and astronomy being in the lead. In other fields the largest number of degrees were given in English, history, economics, and philosophy.

**THE DEGREE OF M. A.** Columbia University, which registered 1167 non-professional graduate students and granted 269 degrees of M. A. in

1910, instituted an inquiry through the Association of American Universities concerning current regulations governing the degree of M. A. No consensus of opinion was found except that the degree represents one year of graduate study, after the bachelor's degree or its equivalent, devoted to one subject or a small group of subjects. The degree appears to be sought as an approach to the doctor's degree, as a certificate for teaching, and as a sign of general culture. Nearly everywhere graduates and undergraduates are instructed together to some extent, about half the institutions allow the counting on some professional courses, about half make no specific statement of requirements, the other half require from eight to sixteen class hours per week. After a study of these facts and much consultation with its own departments, Columbia adopted in December a requirement for the degree of one year of resident graduate work representing about forty hours a week of attendance, preparation, reading, or laboratory work, divided into eight courses, each representing one-fourth of the candidates' time for half a year, the courses to be selected and arranged from one or more departments under the guidance of the department of major interest and approved by a faculty committee. The requirement of theses, hitherto obligatory, is left to the department of major interest. Where a thesis is required, as from all who look forward to research, it will be credited in place of one of the eight required courses.

**PROFESSIONAL STUDIES.** In professional fields the progress in medicine has been noted above. In law Harvard announced a four years' course, after the A. B., leading to the degree of juris doctor (J. D.); and Columbia opened a new half-million dollar law building with a research library. In the field of theology, Union Theological Seminary moved to its new three-million dollar equipment adjoining Columbia University. In agriculture the fourth session of the Graduate School of Agriculture at the Iowa State College in June and July enrolled 207 students from 39 States and 6 foreign countries. Present schools increased in attendance and resources. Columbia added agriculture and landscape architecture and gardening to its programme of studies, and Syracuse added agriculture and forestry. New State schools were begun and various railroads coöperated by making possible special trains carrying lecturers and demonstrators of agriculture and dairying. Cornell issued statistics showing that all but 46 of its 899 agricultural graduates were engaged in agriculture or agricultural education. Of the 206 graduates of the Illinois College of Agriculture 95 per cent. were reported as so engaged. Schools of engineering while continuing to emphasize physical science, began to require political and social sciences, history, and economics as well, while increasing, on the other hand, their connection with professional developments, such as illuminating engineering. In the field of music the Institute of Musical Art moved into its new half-million dollar building near Columbia University.

**ADMINISTRATION.** There were a number of important administrative changes in 1910. At the University of Michigan, Dean H. B. Hutchins of the law school was elected to succeed James B. Angell, who concluded his thirty-eight years presidency in 1909. President Cyrus Northrop resigned his twenty-six years' presidency of the

University of Minnesota, and George E. Vincent, dean of the faculties of art, literature and science in the University of Chicago, was elected to succeed him. C. C. Harrison, provost of the University of Pennsylvania during its great expansion since 1894, resigned and Edward F. Smith, vice-provost for twelve years, was elected his successor. The governorship of New Jersey claimed President Wilson from Princeton; age, Chancellor MacCracken from New York University; and ill-health, President Hazard from Wellesley. Their successors have not yet been elected. G. E. Fellows, president of the University of Maine since 1902, resigned and was succeeded by Robert J. Aley, editor of the *Educator-Journal*. William E. Huntington, for twenty-one years dean and for seven years president of Boston University, resigned. Professor Edmund C. Sanford was inaugurated president of Clark College, succeeding the late Carroll D. Wright. Dean W. P. Few, of Trinity College, N. C., was elected president, succeeding John C. Kilgo on the election of the latter to a bishopric. Dr. Chesman A. Herrick was elected to succeed A. H. Fetterolf, president of Girard College since 1882. Professor W. T. Foster of Bowdoin was elected president of Reed College, Portland, Ore, which is to open in 1911 with an endowment of \$3,000,000.

Published discussion of administrative problems seemed in general to point to a fuller appreciation of the coöperative responsibility between presidents and professors. The trustees of the University of Chicago on the occasion of Mr. Rockefeller's final gift in December recorded that as the donor of unparalleled gifts to a single institution he had refused to allow the university to bear his name, had reluctantly consented to be called its founder, had never suggested the appointment or removal of any professor or expressed assent or dissent to any of their views no matter how different from his own, that he had, in short, held a relationship to the university that formed an ideal for all educational benefaction.

The administrative affairs of Princeton were given much publicity from February to October through press statements of differences of opinion, concerning the location of proposed graduate schools, between the president of the university, the dean of the graduate school, and various trustees, professors and alumni. In February W. C. Proctor of Cincinnati withdrew his gift of October, 1909, of \$500,000 for the graduate school, for which a \$300,000 bequest was already available. In May, I. C. Wyman of Salem, Mass., bequeathed between two and three million dollars to the graduate school. In June, Mr. Proctor renewed his gift, which was reacquired in October.

A contest for the control of Vanderbilt University between the chancellor and a majority of the board of trustees, supported by Mr. W. K. Vanderbilt, and a minority of the board and the General Conference of the Methodist Church South, resulted in the board's refusing to receive trustees elected by the conference, the resignation of two bishops from the board, and the trial by the conference of a third bishop who supported the board. The whole matter is to be referred to the courts.

In April Dr. Charles W. Needham resigned the presidency of George Washington University after the Carnegie Foundation had removed that institution from its accepted list and a

Congressional Committee had found that its endowment had been dissipated. In June its professors offered to accept half salaries for the prospective year and its trustees placed a second mortgage upon the real estate of the institution, both attributing its misfortunes to expansion beyond its resources.

**GENERAL QUESTIONS.** Baccalaureate addresses dwelt with considerable uniformity on the service of universities and colleges in imparting some definiteness and precision concerning life and conduct in a time of destructive criticism and luxury.

There was much general discussion of university and college matters but no expression of opinion so significant as the statement of Professor Lamprecht of Leipzig that the universities of the United States now outrank those of Germany. University equipment continued to expand and at Yale \$50,000 a year was set aside for increasing salaries of assistant professors toward a maximum of \$3000, and those of full professors toward a maximum of \$5000. Dartmouth received a special endowment of \$400,000 for increasing salaries. The University of Pittsburg adopted an academic year of 45 weeks divided into four terms, and a system of industrial fellowships. The College Entrance Examination Board recommended for use in 1911 and thereafter the more flexible requirements in Latin formulated by the American Philological Association, and topics for English composition taken from the student's general knowledge and experience as well as from reading. The new Harvard plan by which a student must take at least four courses in one department and choose at least six from three other general fields became operative in 1910. Amherst, in June, restricted its electives by limiting the number of subjects taken at a time and requiring a number to be pursued beyond the elementary stage. Meanwhile, Professor Foster of Bowdoin published in *Science* (November 18) statistics showing that the new Harvard rules if applied to the progress of the class of 1894 would have allowed the programmes chosen by men who have since shown only average ability, but would have greatly restricted the programmes selected by the men who have since become distinguished. The English honor and pass system which has been tried at Harvard for several years was in 1910 extended to Columbia and recommended at Yale.

**PHYSICAL EDUCATION.** In the field of physical education a committee reported to the American School Hygiene Association at Indianapolis in March information from 124 universities and colleges showing that 102 had departments of physical education; 88 gave and 58 prescribed work in hygiene; 91 gave medical examinations; sanitary inspection of buildings, water supply, grounds, dormitories, and kitchens was given by 69, 64, 62, 57, and 47 institutions, respectively; 21 accepted hygiene and 8 physical training for admission; 21 required physical examinations and 6 hygiene for admissions. These statistics showed rapid progress since 1884 when only 28 institutions taught hygiene, and 1890 when only 6 prescribed it. The investigation showed further the tendency to correlate all of the interests relating to physical welfare. Meanwhile, although Wisconsin found that fifty students who were detected in dishonest work were below the standard in nearly every physical measurement, Yale failed to find any appreciable physi-

cal improvement in seniors over freshmen, and this although 88 per cent. of the men reported participation in athletics in addition to gymnasium work. In May, Princeton established a department of physical education. The new football rules proved a sincere effort at reform, but there continued to be many injuries and the Intercollegiate Rules Committee continued, late in December, to consider further modifications. The continued success of Rugby football on the Pacific coast and the commendation of it by returned Rhodes scholars attracted favorable attention. Chicago, following Wisconsin, took its baseball team to Japan.

**STUDENT AFFAIRS.** There were, as usual, many student dramatic performances. In May Bryn Mawr repeated its quadrennial Elizabethan pageant, with five hundred performers. In June Miss Maude Adams and her company presented "As You Like It" in the Greek Theatre at the University of California.

Concerning fraternities Illinois reported that 284 fraternity men spent on the average \$587 annually as compared with an average expenditure of \$407 on the part of 284 non-fraternity men; 69 non-fraternity men spent less than any fraternity man, namely from \$150 to \$350; 31 fraternity men spent more than any non-fraternity man, namely from \$850 to \$1550. Cornell announced that, while eleven fraternities lost no members through unsatisfactory work, eight fraternities lost from 10 to 17 per cent., that of 135 undergraduates dropped for poor standing 59 were fraternity men, and that of 421 members of six clubs 110 had been dropped or suspended. At Kansas members of fraternities and sororities averaged in scholarship 20 per cent. below non-members. At Wellesley an undergraduate alumnae and faculty congress on secret societies decided in March that they should be open, without election, to any junior or senior of high academic standing, of unusual excellence in any department, or of public service to the college. In October students were assigned to societies by a committee. The faculty of Mt. Holyoke determined in November to terminate all secret societies in 1913. On the other hand President Faunce of Brown spoke before the National Educational Association in June against suppressing, ignoring or directing the fraternities and in favor of a faculty attitude of sympathy, consultation and coöperation for worthy ends. Similarly, President Butler of Columbia inaugurated a plan for giving academic credit to such student activities as publication, debating, and literary societies. There were conspicuous instances of disorder and lack of discipline during the year at Yale, Wesleyan, and two or three minor institutions. Cornell created the position of proctor for the supervision of that one per cent. of the study body to whom disorder had been traced. The Association of Cosmopolitan Clubs in American Universities at its third annual convention at Cornell during the Christmas recess of 1909-10 affiliated its 23 branches with 2000 members with the European international federation of students, "Corda Fratres." The annual organ of the association became a monthly during the year. The Religious Education Association meeting at Nashville in March discussed "The Denominational Colleges," "The Relation of the Churches to Colleges and Universities," "The Moral Life of College Students," and "Fraternities and Moral Training."

**THE EDUCATION OF WOMEN.** Women students

gained twenty out of twenty-seven elections to Phi Beta Kappa at Illinois and nineteen out of thirty-one at Cornell. At Bryn Mawr President Taft delivered an address on the higher education of women in June and at its twenty-fifth anniversary in October there were numerous addresses by distinguished educators on the same topic. Vassar decided to continue the limitation of its numbers to 1000. Smith's registration of 1700 indicated a slight decline incident to the increase of tuition from \$100 to \$150. The Woman's College of Baltimore changed its name to Goucher College, in honor of its founder. Tufts abandoned co-education, founding an affiliated institution for women to be known as Jackson College. The Women's Educational and Industrial Union of Boston issued information concerning one hundred "Vocations for Trained Women other than Teaching."

**ALUMNI INTERESTS.** Alumni of our universities and colleges comprised 56 per cent. of the persons included in the sixth edition of *Who's Who in America*. Of the clergy there listed 81 per cent. were college graduates, of the lawyers 52 per cent., of the physicians 49 per cent. The biennial catalogue of Yale appearing in December listed 15,958 living graduates, 3483 in law, 1633 in education, 1453 in manufacturing, 1391 in finance, 1384 in engineering, 1247 in medicine, 1189 in mercantile careers, and 1177 in theology. These occupations show a drift away from the professions toward business. Of the Dartmouth Class of '99 at their tenth anniversary, sixty-seven men reported an average earning of \$2097. Five had less than \$1000, fourteen between that and \$1500, eighteen from \$1500 to \$2000, six from \$2500 to \$3000, one or two were in each of the next five hundred dollar groups up to \$7000. Of the Harvard law Class of 1905, 150 reported at their fifth anniversary average net earnings of \$2616. The alumni of Brown voted 2008 to 223 in favor of abolishing its charter requirement that the president and a majority of the trustees should be Baptists. Professor Bédier of the Collège de France, lecturing at Harvard and Columbia, expressed great admiration for the loyalty and generosity of American alumni associations.

**UNIVERSITY OF BERLIN CENTENARY.** Of unusual interest to Americans was the celebration of the hundredth anniversary of the University of Berlin on October 12, 1910. Several representatives from the United States were present, and a congratulatory address was made by President Hadley of Yale.

**OBITUARY.** Great loss was sustained by philosophy and psychology in the death, in August, of Professor William James (q. v.) of Harvard. Goldwin Smith (q. v.), sometime Regius Professor of Modern History at Oxford and colleague of Ezra Cornell in founding the university that bears his name, died in February. Harvard lost an eminent naturalist and generous donor in Professor Alexander Agassiz (q. v.), also the distinguished dean of its Law School, James Barr Ames (q. v.), and its rhetorician Professor A. S. Hill (q. v.) Sociology suffered the loss of Professor Sumner (q. v.) and music of Professor Sanford (q. v.), both of Yale; philosophy, Professor Borden P. Bowne (q. v.) of Boston University, and biology, Professor Whiteman (q. v.) of Chicago.

**BIBLIOGRAPHY.** Among the important educational books of the year were: *The Universities*

*of Ancient Greece* by John W. H. Walden, *Great American Universities* by Edwin E. Slosson, *The Life of Daniel Coit Gilman* by Fabian Franklin, *The Life of Mary Lyon* by Beth R. Gilchrist, *Life and Letters of Josiah Dwight Whitney* by Edwin Tenney Brewster, *Idols of Education* by Charles M. Gayley, *With the Professor* by Grant Showerman, *The Education of Women* by Marion Talbot, and *The Women of a State University* by Helen R. Olin. See also EDUCATION IN THE UNITED STATES.

**UPPER-SENEGAL AND NIGER.** A French inland colony in French West Africa (q. v.). Area, 819,000 sq. kilometres. Estimated population (1908), 4,521,685. Capital, Ramako, with 6524 inhabitants. In 1908 rubber was exported to the value of 436,716 francs; gum arabic, 12,000. Total imports (1908), 2,306,765 francs; exports, 483,625. Koulikoro is connected by rail with Kayes, and by boat up the Niger with Timbuktu. Length of telegraph lines, 7176 kilometres. The telegraph line from Timbuktu to Algeria is soon to be opened. Post and telegraph offices, 46. Revenue in 1908 (direct taxes, 5,472,399 francs) 6,786,953 francs; expenditure, 6,475,433. All Upper-Senegal and Niger is under civil administration. The lieutenant-governor (1910, M. F. Clozel) administers the colony under the direction of the governor-general of French West Africa.

**URANIUM.** See ATOMIC WEIGHTS.

**URUGUAY.** A South American republic, south of Brazil and east of Argentina. Capital, Montevideo.

**AREA AND POPULATION.** Uruguay is the smallest republic of South America, having an estimated area of 72,210 square miles. The census of October 12, 1908, showed 1,042,668 inhabitants; 1910 estimate, 1,112,000. The following figures are for 1908 and 1909 respectively: Marriages, 6368 and 6591; births, 35,520 and 35,663; deaths, 14,421 and 15,249; arrivals, 153,785 and 165,638; departures, 133,016 and 145,534. The estimated population of the department of Montevideo (256 square miles) was 316,264 in January, 1909, and 324,451 a year later. Besides the capital, the principal towns are Paysandú (about 19,000 inhabitants); Salto (18,000); Mercedes (15,000); Florida (12,500); San José (12,100).

**EDUCATION.** Primary instruction is free and nominally compulsory. In 1909, there were 790 public primary schools, with 76,042 pupils, and 263 private, with 19,028. Plans were made for the opening of 210 new schools in 1910. There are a number of religious seminaries, a few secondary and normal schools, and, at Montevideo, a university. The state religion is Roman Catholicism.

**PRODUCTION.** Less than 2.5 per cent. of the total area is under cultivation, the greater part of the land being given over to grazing. The leading crop is wheat, but the area sown to it was less in 1909 than in 1900. The following figures show the area and production of the grain crops in 1909: Wheat, 276,787 hectares and 233,910 metric tons; corn, 203,268 and 169,464; linseed, 18,341 and 13,260; oats, 6891 and 6711; barley, 3487 and 3072. Other products include tobacco, olives, and grapes. The country's principal source of wealth is stock-raising; according to the livestock census of 1908, there were 8,192,542 cattle, 24,730,289 sheep, 556,297 horses, 17,581 mules, 4358 asses, 180,197 swine, and 19,951 goats. There is also

a considerable number of ostriches. Mining is but little developed.

**COMMERCE.** The value of the special commerce has been as follows in gold pesos:

	1907	1908	1909
Imports .....	37,470,715	36,188,723	37,156,764
Exports .....	34,912,072	40,296,367	45,789,703

The principal imports are textiles, foodstuffs, various manufactured articles, and alcoholic beverages. Of the exports in 1908, livestock products amounted to 34,772,000 pesos and agricultural products 2,113,000 pesos. Recent figures for values in detail are not available. The largest single export is wool, for which the following quantities are reported: 1906-7, 92,593,000 lbs.; 1907-8, 105,820,000; 1908-9, 114,639,000; 1909-10, 132,700,000. Other large exports are hides and skins, meat, grease and tallow, and live animals. Figures for 1907, the latest available, show the distribution of the special trade as follows, in thousands of pesos:

	Imps.	Exps.		Imps.	Exps.
Gt. Britain ..	11,572	2,993	Arg'na ..	2,563	6,245
Germany ....	6,080	4,648	Brazil ....	1,744	3,004
France .....	3,924	6,432	Spain ..	1,725	805
U. States .....	3,440	1,563	Cuba....	150	1,093
Italy .....	2,898	1,155	Other....	686	1,422
Belgium .....	2,689	5,552			
Total ..37,471 34,912					

In 1909 there entered at the ports 4869 vessels, of 7,514,385 tons (steam, 3515, of 7,320,376), and cleared 4848 vessels, of 7,457,710 tons (steam, 3410, of 7,273,991 tons). Of the total tonnage, 7,184,287 entered and 7,085,335 cleared at Montevideo.

**COMMUNICATIONS.** Length of railways at the end of 1909, 2488 kilometres (1546 miles), of which 1255 kilometres (780 miles) were under state guaranty; under construction, 308 kilometres (191 miles). Extensions of the existing mileage are projected. Telegraph (1909): 319 offices, with 7804 kilometres (4849 miles) of line; post-offices, 1025.

**FINANCE.** The monetary standard is gold, the unit of value being the peso (coined only in silver), worth \$1.034. For the year 1907-8, revenue and expenditure amounted to 20,301,737 and 20,257,462 pesos respectively. The estimated expenditure for 1908-9 and 1909-10 showed the same total, namely, 21,075,331 pesos; for 1910-11, 23,333,261 pesos. Estimated revenue for 1908-9, 21,079,883 pesos; for 1909-10, 23,366,830 pesos. About two-thirds of the revenue is derived from customs; other sources are property, factory and tobacco taxes, and trade licenses. Larger items of expenditure in the 1910-11 budget: National obligations (including debt service and railway guaranties), 10,639,724 pesos; army and navy, 3,580,740; interior, 3,412,251; industries, labor, and public instruction, 2,308,794; finance, 1,523,843. The public debt December 31, 1908, stood at 130,157,090 pesos; December 31, 1909, 135,805,784 pesos, consisting of 125,231,882 pesos external, 2,560,000 international, and 8,013,902 internal.

**NAVY.** The navy in 1910 included: one armored cruiser (2200 tons), one torpedo cruiser (1500 tons), 4 gunboats, 4 dispatch boats, and one school ship.

**ARMY.** In 1910 the army comprised: general staff, 30 officers; office of military administration, 20 officers, 100 employees and mechanics; 2

regiments of field artillery, 86 officers, 600 men; 1 battery of Maxim-Vickers guns, 6 officers, 100 men; 1 battery of fortress artillery, 6 officers, 100 men; 1 company of machine guns, 6 officers, 100 men; 3 sections of artillery, each of 2 officers and 20 men; escort troops, 6 officers, 100 men; 10 regiments of cavalry, 196 officers, 2550 men; 8 squadrons of cavalry, 48 officers, 600 men; 8 battalions of infantry, 180 officers, 2400 men; 9 companies of infantry, 54 officers, 720 men, 1 company of engineers, 8 officers, 100 men; 1 military academy with 16 professors and 50 cadets; 3 military courts, 26 officers; 1 national arsenal, 15 officers, 150 employees and ouvriers, 15 generals and 82 cannons and machine guns.

**GOVERNMENT.** The executive authority is vested in a president, elected by the General Assembly for four years and assisted by a responsible ministry. The legislative power rests with the General Assembly, which consists of the Senate (19 members) and the House of Representatives (75). President in 1910, Claudio Williman, inaugurated March 1, 1907.

**HISTORY.** A plot was discovered against the government on the northern frontier early in October and it was reported later that 10,000 revolutionaries were gradually gathering. The government ordered a strict censorship of the press and few details could be obtained. The revolution was attributed in the press to the government's support of José Batlle y Ordóñez as a candidate for the presidency, who was regarded by many as reactionary and was generally unpopular. An insurgent force of 3000 was reported on October 29 to be advancing toward the capital from the Brazilian frontier, and later to have captured the town of Nico Pérez. There were conflicting reports at the close of the year as to the suppression of the movement.

**UYEHARA, G. E.** See **LITERATURE, ENGLISH AND AMERICAN, Travel and Description.**

**UTAH.** One of the Mountain Division of the United States. Its area is 84,990 square miles. The capital is Salt Lake City.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 373,351 as compared with 276,749 in 1900 and 210,773 in 1890. The increase in the decade from 1900 to 1910 was 34.9 per cent. The State ranks forty-first in point of population, whereas in 1900 it ranked forty-second. The population of the larger towns and cities will be found in the tables in the article **UNITED STATES CENSUS.**

**MINERAL PRODUCTION.** The mineral products of the State are of great value. It ranks high as a producer of copper. The copper product in 1909 was 101,241,114 pounds, a marked increase over the production of 1908, which was 71,370,370 pounds. The coal production of the State has steadily increased in recent years. There were produced in 1909 2,266,899 short tons valued at \$3,757,060 as compared with a production of 1,846,792 short tons valued at \$3,119,338 in 1908. This was the first time in the history of the State that a total of 2,000,000 tons had been reached. The increase was made almost entirely in Carbon county, which alone produced more coal in 1909 than the entire State produced in any year prior to 1909. This increase was due to the revival of the metal mining industry and to the general prosperity which came from good harvests in the agricultural sections. There were 16 fatal and 89 non-fatal accidents in the coal mines of the State

during the year. This State produced in 1909 gold valued at \$4,243,907 as compared with a value for the product of 1909 of \$4,213,300. There were produced 11,242,301 fine ounces of silver as compared with 10,551,100 fine ounces in 1909. There were produced in 1909 64,534 tons of lead as compared with 42,455 tons in 1908. The production of spelter amounted to 5960 tons in 1909 as compared with a production of 282 tons in 1908. The lead production of 1910 was, according to local estimates, 112,209,256 pounds valued at \$4,985,831. The copper production was 125,000,000 pounds valued at \$15,937,500 and the zinc product was 15,337,367 pounds valued at \$351,243. The total value of the metals mined in the State in 1910 was \$33,028,909.

**AGRICULTURE.** The acreage, production and value of leading crops are given for 1909 and 1910 in the following table:

	Acreage	Production	Value
Corn, 1910.....	13,000	394,000	331,000
1909.....	13,000	408,000	355,000
Winter wheat, 1910.....	155,000	3,178,000	2,670,000
1909.....	135,000	3,240,000	2,916,000
Spring wheat, 1910.....	100,000	2,530,000	2,125,000
1909.....	100,000	2,850,000	2,565,000
Oats, 1910.....	58,000	2,494,000	1,197,000
1909.....	55,000	2,536,000	1,319,000
Barley, 1910.....	13,000	488,000	281,000
1909.....	13,000	520,000	343,000
Rye, 1910.....	3,000	56,000	38,000
1909.....	3,000	66,000	46,000
Potatoes, 1910.....	15,000	2,130,000	1,257,000
1909.....	15,000	2,700,000	1,161,000
Hay, 1910.....	380,000	1,140,000	10,260,000
1909.....	375,000	1,088,000	9,792,000

a Tons.

**EDUCATION.** The school population on June 30, 1910, was 108,924. There were enrolled in the schools of the State 86,904 pupils and the average daily attendance was 67,984. The average monthly salary of male teachers was \$90.05 and of female teachers \$57.55. The expenditures for educational purposes amounted to \$2,832,273 and the valuation of school property to \$5,902,801.

**POLITICS AND GOVERNMENT.** There was no session of the legislature in 1910 as the sessions are biennial and the last was held in 1909. The elections held in November included Representatives to Congress but did not include an election for governor, as Governor Spry's term does not expire until January, 1913.

A Representative to Congress was elected in November, Joseph Howell, Republican, defeating Ferdinand Erickson, Democrat, the vote being 50,604, to 32,730. The American party candidate, Allen T. Sanford, polled 14,042 votes, the Socialist, James A. Smith, 4857. An associate Justice of the State Supreme Court, D. N. Straup, was elected by the Republicans, by substantially the same vote as for Howell. The distinctive issue nominally was the liquor question, the Republicans being for prohibition in the rural districts and license with regulation in the cities. The Democrats were for prohibition State wide. The American party declared against church rule in politics and civil affairs. The church influence, for the Republicans, decided the election. A legislature was elected in which there are 16 Republicans in the Senate to 2 Democrats. In the lower House 38 Republicans to 7 Democrats. It will elect a United States Senator to succeed George Sutherland, Republican.

**STATE OFFICERS** Governor, William Spry;

Secretary of State, C. S. Tingey; Treasurer, David Mattson; Auditor, Jesse D. Jewkes; Attorney General, A. R. Barnes; Superintendent of Education, A. C. Nelson; Commissioner of Insurance, Willard Done—all Republicans.

**SUPREME COURT.** Chief Justice, Joseph E. Frick; Justices, W. M. McCarty and Daniel N. Straup; Clerk, H. W. Griffith—all Republicans.

**STATE LEGISLATURE, 1911.** Senate, Democrats 2, Republicans 16, total 18. House of Representatives, Democrats 7, Republicans 38, total 45.

**VACATION SCHOOLS.** See EDUCATION IN THE UNITED STATES.

**VACCINATION.** See SMALLPOX AND VACCINATION.

**VACCINE THERAPY.** See SERUM THERAPY.

**VAJIRAVUDH, MAHA.** King of Siam who succeeded to the throne on the death of his father, Paraminda Mahr Chulalongkorn (q. v.). He was born in 1881 and was educated in England. He visited the United States in 1902. During his visit he demonstrated his dislike for royal pomp and his thoroughly European training. See SIAM.

**VALPARAISO UNIVERSITY.** An institution of general and higher learning at Valparaiso, Ind., founded in 1873. The attendance in 1909-10 was over 5000 students. The faculty numbered 187. Among the notable changes during the year was the addition of instructors in the law, music, engineering, medical, and dental departments. The courses of study, especially the B. S. and A. B. courses, were strengthened. The construction of a new law building was begun. The total income of the university is between \$250,000 and \$300,000. The president is H. B. Brown.

**VANADIUM.** See ATOMIC WEIGHTS.

**VAN DER WAALS, DIEDERIK.** See NOBEL PRIZES.

**VAN CLEAVE, JAMES WALLACE.** An American manufacturer, died May 15, 1910. He was born in Marion county, Ky, in 1849, and was educated at the Springfield Academy. In 1862-3 he served in the Confederate army under General John H. Morgan. After the close of the war he began in 1867 the manufacture of stoves and ranges in Tennessee. He later went to St. Louis and carried on the same business. He took great interest in labor questions and was an enthusiastic advocate of the open shop. This brought him into public notice when, as president of the Buck's Stove and Range Company of St. Louis, he joined forces with D. E. Loewe of Danbury, Connecticut, and carried through the courts the fight to restrain President Samuel Gompers of the American Federation of Labor and ex-President John Mitchell and Secretary Frank Morrison from interfering with the Bucks company and the Danbury company's business by carrying on a boycott by publishing a so-called "unfair list." As a result of this contest, Gompers, Mitchell, and Morrison were found guilty of contempt of court in December, 1908, and were sentenced to imprisonment. In 1906 Mr. Van Cleave was elected president of the National Association of Manufacturers, and in this position he fought aggressively for the open shop.

**VANDERBILT CUP RACE.** See AUTOMOBILES.

**VAN DEVANTER, WILLIS.** An American jurist appointed in 1910 associate justice of

the United States Supreme Court. He was born in Marion, Indiana, in 1859. He graduated from Ashbury (now De Pauw) University in 1878, and afterwards studied law at the Cincinnati Law School. After practicing law at Marion until 1884, he removed to Cheyenne, Wyoming. In 1886 he was appointed commissioner to revise the Wyoming statutes. He was city attorney of Cheyenne in 1887 and 1888. In the latter year he was a member of the Territorial Legislature. In 1889 he was appointed chief justice of the Supreme Court of Wyoming. From 1892 to 1894 he was chairman of the Republican State Committee, and from 1896 to 1900 he was a member of the Republican National Committee. He acted as Assistant Attorney-General of the United States, assigned to the Department of the Interior, from 1897 to 1903. In the latter year he was appointed circuit judge of the eighth judicial circuit. He held this position until his appointment to the Supreme Court. From 1898 to 1903 he was professor of equity pleading and practice at Columbian, now George Washington, University.

**VAN DYKE, HENRY.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**VAN HISE, C. R.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**VAN WAGENEN, A.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**VASHEGYITE.** See MINERALOGY.

**VASSAR COLLEGE.** An institution of N. Y., founded in 1861. The number of students higher learning for women, at Poughkeepsie, N. Y., founded in 1861. The number of students enrolled in the several departments in 1910-11 was 1050 and the faculty numbered 105. There were no noteworthy changes in the membership of the faculty during the year. The benefactions received during the year were not noteworthy, amounting in all to about \$5000. The productive funds of the college amounted in the year 1909-10 to \$1,387,000. In the library there are about 70,000 volumes. The President is James M. Taylor, D. D. LL. D.

**VEDDER, ELIHU.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**VEILLER, L.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**VENEZUELA, UNITED STATES OF.** A South American republic, east of Colombia. Capital, Caracas.

**AREA AND POPULATION.** The area, as officially estimated, of the 20 states, two territories, and federal district is 393,976 square miles. Estimated population (1910), 2,685,606. The following figures are for 1908 and 1909 respectively: marriages, 6050 and 6003; births, 71,033 and 72,385; deaths, 57,088 and 53,241; arrivals, 4280 and 9284; departures, 3979 and 7063. Principal towns, with estimated population: Caracas, 73,000; Maracaibo, 50,000; Valencia, 40,000; Barquisimeto, 32,000; Puerto Cabello, 14,000; La Guaira, 12,000.

**EDUCATION.** Public schools are reported as follows for the last quarter of 1909: national, 1014 (with 32,141 pupils enrolled); federal, 146 (4817); municipal, 225 (7537); second-grade, 4 (131); total, 1389 (44,626); in addition, 154 private schools (4092 pupils). There are some provisions for higher and professional education. The state religion is Roman Catholicism.

**PRODUCTION AND COMMERCE.** The more important crops include coffee, cacao and sugar. Other products are cereals, tobacco, rice, cotton and rubber. Stock-raising is important, and there are probably over 6,000,000 cattle, 1,600,000 goats, 1,600,000 swine, 313,000 asses, 191,000 horses, and 89,000 mules. The country is rich in minerals but exploitation is slight. There are some workings of gold (Yuruari region), copper, silver, iron, salt, and asphalt.

Imports and exports for years ended June 30 have been valued in bolivars as follows:

	1907	1908	1909
Imports .....	53,858,197	48,894,050	49,180,485
Exports .....	81,282,837	72,804,150	38,145,316

The leading imports are cotton textiles, flour, rice, and hardware. Values of the leading exports in the fiscal year 1909 were: Coffee, 40,492,000 bolivars; cacao, 17,904,000; rubber and balata, 9,126,000; hides and skins, 6,401,000; gold, 1,592,000; cattle, 1,049,000; aigrettes, 1,011,000; asphalt, 744,000. About one-half of the coffee, two-thirds of the hides, and almost all of the aigrettes and asphalt go to the United States, and a little more than one-fourth of the coffee and one-half of the cacao to France.

Imports and exports by countries in the fiscal year 1909, in thousands of bolivars:

	Imps.	Exps.		Imps.	Exps.
Gt. Brit. ..	14,990	7,621	France...	1,493	24,768
U.S. ....	14,270	37,231	Neth'ds. .	501	3,409
Germany ..	11,878	4,467	Cuba ....	.....	773
Spain .....	2,102	3,665	Other....	2,322	854
Italy .....	1,624	357			
			Total ..	49,180	83,145

In 1909, there entered at the ports 939 vessels, of 1,081,783 tons.

**COMMUNICATIONS.** In 1910, the total length of railways reported as in operation was 792 kilometres (492 miles), comprised in eleven lines. These lines can afford adequate transportation to only a very small part of the country. Steamer service is maintained on the Orinoco, Apure, and Portuguesa between Ciudad Bolívar, the principal Orinoco port, and the interior, as well as points along the coast. In 1909, telegraph; 179 offices, with 7839 kilometres (4871 miles) of line; post-offices, 253.

**FINANCE.** For the fiscal year 1908-9, revenue and expenditure are reported at 50,410,432 and 47,668,809 bolivars respectively (the bolivar is equivalent to the franc, or 19.3 cents). For 1909-10, the budget balanced at 50,000,000 bolivars and for 1910-11 at 48,000,000. The larger items of estimated revenue for 1910-11 are: Customs duties and parcels post, 20,250,000 bolivars; extraordinary surcharge of 30 per cent., 6,075,000; surcharge of 25 per cent., 5,062,500; stamps and cigarette paper, 5,875,000; salt monopoly, 3,750,000; liquor excise, 3,050,000;—the larger expenditures: Debt and treasury, 18,589,403 bolivars; interior, 10,032,481; army and navy, 7,994,809; public instruction, 3,412,386; fomento, 3,361,235. On December 31, 1908, the debt stood at 217,201,179 bolivars; December 31, 1909, 207,995,052 bolivars, including: the diplomatic debt of 1905, 129,178,080; internal consolidated debt, 65,524,428; other debts, 13,292,544.

**ARMY.** The active army includes 20 battalions of infantry, each of 400 men, 8 batteries of artillery, each battery of 200 men, and a naval battalion.

**NAVY.** The navy includes three gunboats, a dispatch boat, a transport, a torpedo boat, and a tug.

**GOVERNMENT.** The constitution of August 5, 1909, vests the executive authority in a president, elected by the congress for four years and assisted by a cabinet. The legislative power devolves upon a congress of two houses, the Senate (40 members) and the Chamber of Deputies (one for each 35,000 inhabitants). The president in 1910 was Gen. Juan Vicente Gómez. When President Cipriano Castro left the country in December, 1908, General Gómez, as vice-president, became acting president; elected provisional president, he assumed office August 13, 1909; elected, in April, 1910, constitutional president for four years, he was installed on the 3d of June following.

**HISTORY.** Despite the treaty of June, 1909, with Colombia, covering cases of dissension between the two republics, a quarrel broke out anew in the autumn of 1910 and on September 23 the Venezuelan government recalled its diplomatic representative from Bogotá. But later it was denied that negotiations had been broken off with Colombia and the Venezuelan minister at Bogotá was kept at his post. The point at issue was said to be Colombia's objection to the cession of certain lands which the treaty of 1909 required of her. The case of the Orinoco Steamship Company, which had been the cause of long disagreement between the United States and Venezuelan governments under President Castro, was decided by the Court of Arbitration at The Hague. See **ARBITRATION, INTERNATIONAL.**

**VERMONT.** One of the New England Division of the United States. It has an area of 9564 square miles. Its capital is Montpelier.

**POPULATION.** The population in 1910, according to the Thirteenth Census, was 355,956 as compared with 343,641 in 1900 and 332,422 in 1890. The increase in the decade 1900 to 1910 was 3.6 per cent. This is the smallest proportion of increase shown in any of the New England States. The State ranks forty-second in point of population, whereas in 1900 it ranked thirty-ninth. The population of the larger cities and towns will be found in the tables in the articles **UNITED STATES CENSUS.**

**MINERAL PRODUCTION.** The chief mineral products of the State are stone in its several varieties. Of these marble and granite form the greater part of the production. In the quarrying of marble Vermont greatly surpasses any other State. The value of this product in 1908, the latest year for which statistics are available, was \$4,679,960. The value of the granite produced in the same year was \$2,451,933. The State ranks first in the production of stone, surpassing Pennsylvania which in 1907 held first place. Slate is produced in large quantities. The value of this product in 1908 was \$1,710,491. The clay products are of considerable value. Among other minerals produced are coal products, lime, metallic paint, sand and gravel, talc and soapstone.

The acreage, production and value of the principal crops in 1909-10 are shown in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	67,000	2,881,000	\$1,901,000
1909.....	65,000	2,405,000	1,956,000
Oats, 1910.....	85,000	3,528,000	1,764,000
1909.....	81,000	2,608,000	1,304,000
Barley, 1910.....	15,000	465,000	316,000
1909.....	15,000	450,000	346,000
Rye, 1910.....	2,000	35,000	30,000
1909.....	2,000	31,000	31,000
Buckwheat, 1910....	8,000	192,000	134,000
1909.....	8,000	176,000	134,000
Potatoes, 1910.....	29,000	3,770,000	1,696,000
1909.....	30,000	4,650,000	2,046,000
Hay, 1910.....	930,000	1,256,000 <sup>a</sup>	15,574,000
1909.....	879,000	1,099,000	16,155,000
Tobacco, 1910.....	200	320,000 <sup>b</sup>	46,400
1909.....	200	335,000	50,250

<sup>a</sup> Tons. <sup>b</sup> Pounds.

**EDUCATION.** The number of pupils enrolled in the schools of the State in 1910 was 66,615 and the average daily attendance was 52,104. There are 2403 public schools in the State. Several important laws have been recently passed by the State legislature. Among these was a measure establishing teachers' training courses in high schools and academies.

**FINANCE.** The report of the State treasurer for the year ending July 10, 1909, showed a balance in the treasury July 1, 1909 of \$468,458. The total receipts during the year were \$1,945,753. The total disbursements for the year amounted to \$1,822,882, leaving a balance on June 30, 1910 of \$501,329.

**CHARITIES AND CORRECTIONS.** The correctional institutions number three: The State Prison at Windsor, the House of Correction at Rutland, and the Vermont Industrial School at Vergennes. In the State Prison at close of 1910 there were 164 inmates; the House of Correction contained 80, and the Industrial School, 185, ranging in age from 7 to 19 years. There are no charitable State institutions. The prisoners at Windsor and Rutland are required to labor. The industrial school is correctional and industrial and an effort is made to reform the child by kindly measures. The percentage of females in these institutions is small. There are seven at Windsor, 18 at Rutland and 45 girls at Vergennes.

#### POLITICS AND GOVERNMENT

The State legislature began its session on October 5, 1910, and on October 18 Carroll S. Page was re-elected United States Senator.

**ELECTIONS.** Elections for State officers and for Representatives in Congress are held in Vermont in September instead of in November, as in nearly all other States. The results of the election were therefore awaited with considerable interest as a possible indication of the trend of the national elections. The State is normally strongly Republican and there was little hope on the part of the Democrats that they would elect their candidates. They were, however, sanguine that the Republican majority would be largely reduced and in this their hopes were fulfilled as the figures below indicate. The Republican nominee for governor was Dr. John A. Mead of Rutland, who was lieutenant-governor, while the Democrats nominated Charles D. Watson of St. Albans. The Prohibitionists and Socialists also had tickets in the field but polled only a few hundred votes. The election held on September 6 resulted in the success of the Republican candidate for governor

by a plurality of 17,838 votes. The total vote was, Mead, 35,263 and Watson, 17,425. At the last State election held in 1908 the Republican candidate received a plurality of 29,645 votes, while in the presidential election the same year President Taft's plurality was 28,056. These figures indicate a Republican loss in the State of over 10,000 votes.

One of the most noteworthy political events of the year was the refusal of the Vermont Legislature in connection with various proposed constitutional amendments to vote to remove from the State constitution the time-lock, which provides for amendments only once in every ten years.

**OTHER EVENTS.** On January 18 a case of more than local importance was brought in Brattleboro to test the constitutionality of the corporation tax law passed in 1909. The case was brought by Stella P. Flint of Windsor as general guardian of the property of Samuel M. Stone, a minor, against the Stone-Tracc Company and others. No decision had been rendered in this case at the end of the year.

On April 17 fire destroyed buildings at Hyde Park valued at about \$100,000. The structures burned included the county jail, court house, a church and several stores and residences.

**PRESENT STATE GOVERNMENT.** Governor, John A. Mead; Lieutenant-Governor, Leighton P. Slack; Secretary of State, Guy W. Bailey; Treasurer, Edward H. Deavitt; Auditor, Horace F. Graham; Attorney-General, J. G. Sargent; Superintendent of Education, Mason S. Stone; Commissioners of Insurance, E. H. Deavitt, and Guy W. Bailey; Commissioner of Agriculture, O. L. Martin—all Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, John W. Rowell; Assistant Justices, Loveland Munson, John H. Watson, Seneca Haselton, George M. Powers; Clerk, M. E. Smilie—all Republicans, except Haselton.

**STATE LEGISLATURE, 1911.** Republicans, Senate, 30; House, 196; joint ballot, 226; Democrats, Senate, 0; House, 48; joint ballot, 48; Independent Democrats, Senate, 0; House, 2; joint ballot, 2; Republican majority, Senate, 30; House, 146; joint ballot, 176.

**VERNON, MAX.** See *LITERATURE, ENGLISH AND AMERICAN, Travel and Description.*

**VERY, EDWARD W.** An American naval officer and inventor, died March 1, 1910. He was born in 1847 and graduated from the United States Naval Academy in 1867. In the following year he became an ensign, and a lieutenant in 1871. He was later attached to the United States legation at Paris, and he accompanied Marshal MacMahon when the latter's army entered Paris following the siege of that city by the Prussians. He resigned from the navy in 1885 and became allied with a firm of manufacturers. He subsequently became vice-president of the American Ordnance Company. He was known throughout the world as the inventor of the Very night signal. He had also a high reputation as an expert on large ordnance and several of his inventions are in use in the United States navy and elsewhere.

**VETERINARY EDUCATION.** See *UNIVERSITIES AND COLLEGES.*

**VETERINARY SCIENCE.** The requirements for admission to the Civil Service examination for veterinary positions in the Department of Agriculture, which took effect September 1, 1909, have already resulted in consider-

able improvement in the courses and facilities at the veterinary colleges. Works of particular value as text-books for use in veterinary schools that were published during 1910 include Sisson's *Veterinary Anatomy* and Herzog's *Disease-Producing Microorganisms*.

**TUBERCULOSIS.** The year 1910 was made noteworthy by the death on May 27 of Dr. Robert Koch, who discovered the tubercle bacillus in 1882 and later brought forward tuberculin, which now makes possible the early detection of tuberculosis in cattle. His death removes one of the great founders of modern bacteriology. Probably the most important investigation of tuberculosis, the results of which were made public during the year, was reported by Doctors Park and Krumwiede from the research laboratory of the New York City Department of Health. In these investigations conducted to determine the relationship of the bovine and human tubercle bacilli but one case of bovine origin was found in 297 patients above the age of 16 years. Nine cases of bovine bacilli were found in 54 patients between the ages of 5 and 16 years and in 22 of 84 children under 5 years of age. These investigators have also compiled the results of the reliable cases of human tuberculosis that have been carefully studied and recorded in the literature, a total of 1040. They find that of the 686 cases in patients of 16 years and over 9 gave bacilli of the bovine type; in 132 cases in patients between the ages of 5 and 16 years, 33 were of the bovine type, while in 120 under 5 years of age, 59 were of the bovine bacillary type. The large proportion of the cases with the bovine type consist of the infection of the abdomen and of the glands of the neck. These data emphasize the fact that the bovine type plays a significant and important part in the tuberculosis of children and that prevention must include the sources of bovine bacilli.

In order to demonstrate the practicability of eradicating bovine tuberculosis from a given area, and in the interest of a wholesome milk supply, the eradication of tuberculosis from the District of Columbia was commenced in November, 1909. All the cattle in the District, numbering 1701, were tested with tuberculin and of these 311, or 18.87 per cent., gave reaction. Lesions of tuberculosis were found in 98.36 per cent. of these. All new cattle brought into the District have to be submitted to the tuberculin test, and the herds will be retested at intervals to detect any cases that may have developed since the first test.

During the past year the number of States and Territories requiring a satisfactory tuberculin test as a qualification for the entrance of cattle for dairy or breeding purposes from other States or Territories was increased from 26 to 35. The investigation concerning the prevalence and extent of bovine tuberculosis conducted during the previous fiscal year were extended by the Department of Agriculture in 1910. In coöperative tuberculin tests performed for the interstate movement of dairy and breeding cattle, in which 7159 cattle in 12 States were tested, 2.98 per cent. reacted or were suspected. In the tuberculin tests made by the Bureau of Animal Industry inspection, as a result of co-operation extended to State, or cities, in which 35,042 dairy cattle were tested, 7.11 per cent. reacted or were suspected.

While no method of vaccination has yet been

devised whereby cattle may be fortified against attacks of tubercular infection under all circumstances, still it has been shown by the investigations of the Department of Agriculture that their resistance may be materially increased by means of suitable inoculations.

**TEXAS FEVER AND CATTLE TICKS.** During the past four years the U. S. Department of Agriculture has been engaged in coöperation with State and local authorities in the extermination of the cattle tick which conveys the Texas fever infection. The work has already resulted in great benefits to the portions of the territory that have been freed from the ticks and has demonstrated that it is practicable in time to eradicate the ticks from the infested region. During the fiscal year 1910, 57,518 square miles of territory were released from quarantine as a result of the eradication of these ticks. The total area so released since the beginning of the work amounts to 129,611 square miles. The sum of 250,000 was appropriated for this work during the fiscal year 1910 and a similar amount for the fiscal year 1911. It was shown by Dr. Arnold Theiler of the Transvaal Department of Agriculture that the peripheral coccus-like body of the mild or autumnal form of Texas fever, which has been supposed to represent a stage in the development of the Texas fever parasite, is in reality a distinct organism. This organism has been termed *Anaplasma marginale* and the disease which it produces is known as anaplasmosis. This affection occurs in various parts of the world, the infection being conveyed by the same ticks that convey the true Texas fever parasite.

**LIP-AND-LEG ULCERATION OF SHEEP.** The form of necrobacillosis known as lip-and-leg ulceration of sheep, which appeared in Wyoming about two years ago and became so threatening as to necessitate a Federal quarantine in the early part of the fiscal year 1910, has become much less prevalent under the quarantine and methods of treatment carried out, aided by the drouth of the past season.

**GID IN SHEEP.** This disease of sheep, discovered a few years ago in Montana and due to the invasion of the brain and spinal cord by the larval form of a tapeworm that occurs in dogs has been investigated by the Federal Bureau of Animal Industry. Three papers on the subject were published during the year and others are in the course of preparation. As the disease appears to be prevalent only in a part of Montana, it is very desirable that the parasite be prevented from spreading to other sections and that it be exterminated if possible. On November 25 a quarantine was placed upon all importations of collie, shepherd or sheep dogs in order to prevent further introduction of this tapeworm from abroad.

**HOG CHOLERA.** Practical demonstrations of the value of protective treatment of hogs against hog cholera were carried out successfully in a large number of States. The preparation of the immunizing serum is being quite generally taken up by the States. It is now believed that the use of carbolized hog-cholera blood in connection with the serum will be of distinct advantage when simultaneous inoculations are carried out, as experiments have shown that the virus is not destroyed by a 2 per cent. solution even after contact for two weeks.

**FOOT-AND-MOUTH DISEASE.** In Germany an

institute was established on the small Baltic island of Riems near Greifswald for the purpose of carrying on bacteriological research with a view to stamping out foot-and-mouth disease. The necessary funds are supplied by the government and the work is being conducted under the direction of the University of Greifswald. During the year an outbreak of this disease occurred in Yorkshire, Eng. In Russia it was officially announced that there were 30,000 cases of foot-and-mouth disease among cattle in the province of Yaroslav during the 5 weeks prior to August 12. In Argentina it has been thought several times that this disease, which made its appearance 10 years ago, had been stamped out. This, however, is not the case as during the year it broke out in the province of Corrientes.

**BIGHEAD OF SHEEP.** Bighead is a disease of sheep that occurs in certain sections of the intermountain region of Western United States, at altitudes from 4500 to 8000 ft. above sea level, usually on the plains and valleys between the higher mountain ranges. Investigations made during the year lead to the conclusion that it is brought about by the poisonous properties in a certain plant or plants in combination with certain climatic conditions.

**SCABIES OF SHEEP AND CATTLE.** The eradication of scabies of sheep in the West has progressed so well that during the fiscal year areas aggregating 390,000 square miles were released from quarantine, and the disease was greatly reduced in the territory remaining under quarantine.

**OTHER DISEASES.** In experiments conducted at the Iowa Experiment Station, it was found that sugar beets and mangels favor the formation of kidney and bladder stones when fed to breeding rams and it seems very probable that these roots have the same effect when fed to ewes or to cattle. Other diseases of domestic animals that were the subject of particular investigation in 1910 include chronic bacterial dysentery or John's disease of cattle, swamp fever of horses, infectious abortion, and blackhead or avian coccidiosis. A new nonpathogenic trypanosome was found to be quite commonly present in American cattle, and a new pathogenic species was found in Panama in the blood of horses received from the United States.

**VETERINARY INSPECTION.** An act passed during the year, which became operative October 1, provides for an examination by a veterinary inspector immediately before shipment of all horses, asses, or mules shipped from any British port to any port outside the British Isles. In the Hawaiian Islands an order providing for the inspection of all classes of livestock prior to landing was promulgated by the officials and became effective January 1. This order requires the mallein testing of horses and mules and the tuberculin testing of all cattle above the age of 6 months. A special order relating to glanders requires a quarantine of 21 days, counting from the date of departure from California, of all horse stock arriving in the Territory from that State.

**VETO RESOLUTIONS.** See **GREAT BRITAIN, History.**

**VEZIN, HERMANN.** American actor, died June 11, 1910. He was born in Philadelphia in 1829 and graduated from the University of Pennsylvania. He went to Europe and became an actor. His success was rapid and in 1852

Charles Keane engaged him for the part of Pembroke in his famous revival of *King John*. He afterward made a circuit of the English provinces, returning to London in 1859. Here he played Macbeth, and thereafter appeared with much success as Hamlet, King John, Othello and in other parts. One of his famous later rôles was that of Dr. Primrose. He took Henry Irving's place in *Macbeth* when the latter broke down, and achieved much success. When he was 80 years of age he played as Rowley in Sir Herbert Tree's revival of *The School for Scandal*.

**VIADUCTS.** See BRIDGES.

**VIARDOT-GARCIA, PAULINE.** A French singer, died May 18, 1910. She was born in 1821, the daughter of Manuel Garcia, the famous tenor. She developed her vocal qualities in Mexico and was one of Liszt's most accomplished pupils. For many years she enjoyed a series of unbroken triumphs in the various European capitals. In 1841 she married Louis Viardot, director of the Paris Italian Opera, and in 1863 she retired from the stage. She settled in Paris in 1871 and became a teacher of singing. She was the last of the famous school, headed by her father and Mme. Malibran, who was her sister. She composed several operas, over sixty vocal melodies and many instrumental pieces.

**VICTOR, ORVILLE JAMES.** An American writer, died March, 1910. He was born in Sandusky, O., in 1827 and graduated at the Seminary and Theological Institute at Norwalk, O., in 1847. From that date until 1893 he was engaged in editing various periodicals in New York and elsewhere. He compiled and edited *The Bibliographical Library*, *The American Battle series*, *Library of Standard Romance*, and other works. He was the author of the *History of the Southern Rebellion* (4 vols.), *Incidents and Anecdotes of the War*, *History of American Conspiracies*, and biographies of John Paul Jones, Israel Putnam, Anthony Wayne, and others.

**VICTORIA.** A state of the Australian Commonwealth. Capital, Melbourne. Area, 87,884 square miles. Estimated population, December 31, 1909, 1,297,557. For details, see AUSTRALIA. The executive authority is vested in a governor, appointed by the British Crown and assisted by a responsible ministry. The legislative power devolves upon a parliament of two elective houses, the Legislative Council and the Legislative Assembly. Governor in 1910, Sir Thomas D. Gibson-Carmichael; Premier, John Murray.

**HISTORY.** The policy of closer settlement was beginning to have some effect at the opening of the year and the people were coming to realize its importance. At the beginning of June the government declared its intention during the coming session of amending the Closer Settlement bill. Other features of its programme as announced were an attempt to secure compulsory education and the reintroduction of the Land Tax bill. The Victorian Parliament was opened by the Governor, Sir Thomas-Gibson Carmichael, on July 6, with a speech in which he referred to the uninterrupted prosperity of the state and urged an equitable dealing with the question of the financial relations between the Commonwealth and the states. A very serious accident occurred on July 18 at Richmond Station, when the Brighton express from Melbourne ran into a train which was standing still. The

collision caused the death of nine persons and the injury of 188. The treasurer brought in a Land Tax bill in the latter part of November for a tax of 3 farthings on the pound on unimproved lands.

**VICTORIA NYANZA.** See EXPLORATION, paragraphs on *Detailed Surveys of Africa*.

**VIEBIG, CLARA.** See GERMAN LITERATURE.

**VILLARD, O. G.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**VINCENT, GEORGE EDGAR.** An American scholar and educator, chosen in December, 1910, president of the University of Minnesota to succeed Dr. Cyrus Northrop, resigned. He was born at Rockford, Ill., in 1864 and graduated from Yale University in 1885. He engaged for a short time in editorial work, and traveled in Europe and the Orient. In 1886 he was editor of the *Chautauqua Press* and from 1888 he was vice-principal of the Chautauqua System. In 1907 he was chosen president of the Chautauqua Institution. From 1892 to 1894 he was fellow in Sociology at Chicago University and after having served as an instructor, assistant professor, and associate professor was, in 1904, made full professor. In 1907 he was appointed dean of the faculties of arts, literature and science. He is a son of Bishop John H. Vincent, who founded the Chautauqua System. He is the author of *Social Mind and Education* (1896) and *An Introduction to the Study of Society* (with Professor A. W. Small, 1895).

**VIRGINIA.** One of the South Atlantic Division of the United States. It has an area of 42,267 square miles. Its capital is Richmond.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 2,061,612 as compared with 1,854,184 in 1900 and 1,655,980 in 1890. The increase in the decade from 1900 to 1910 was 11.2 per cent. The State ranks twentieth in point of population whereas in 1900 it ranked seventeenth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The chief mineral products of the State are coal and iron. The coal output increased materially in 1909 over 1908. In the former year there were produced 4,752,217 short tons valued at \$3,868,524 as compared with a production of 4,259,032 short tons valued at \$4,362,102 in 1908. The production in 1910 was estimated by the United States Geological Survey to be about the same as in 1909. There was, however, a considerable increase in the tide-water shipments due to the new Virginian railway and the new developments along its lines. The State is an important producer of coke. In 1908, 1,162,051 short tons were manufactured. Copper was produced in 1909 to the amount of 231,971 pounds as compared with 25,087 pounds produced in 1908. Small quantities of gold and silver are also mined. The State contains deposits of zinc and in 1909 58 tons of spelter were produced. Lead is also found in the State in small quantities. The clay products are of importance, and other mineral products are coal products, talc, soapstone, pyrite, mineral waters, gravel, and barytes.

**AGRICULTURE.** The acreage, production and value of leading crops for 1909 and 1910 are given in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	2,142,000	54,621,000	\$35,504,000
1909.....	2,040,000	47,328,000	35,023,000
Wln. wheat, '10	795,000	10,176,000	9,871,000
'09	790,000	8,848,000	10,175,000
Oats, 1910.....	194,000	4,268,000	2,091,000
1909.....	200,000	3,800,000	2,052,000
Barley, 1910....	3,000	88,000	59,000
1909.....	3,000	86,000	61,000
Rye, 1910.....	20,000	270,000	216,000
1909.....	15,000	184,000	155,000
Buckwheat, '10	21,000	378,000	291,000
'09	21,000	378,000	287,000
Potatoes, 1910..	67,000	6,566,000	3,808,000
'09.....	60,000	5,520,000	3,864,000
Hay, 1,910.....	475,000	565,000a	8,192,000

**EDUCATION.** The school population of the State according to the school census of 1905 was 580,615. The total enrollment in the year 1908-9, the latest for which statistics are available, was 392,651. Of these 275,668 were white and 117,083 were colored. The average daily attendance was 257,724. The State has no compulsory education laws. There were in 1908-9 345 high schools of first, second and third grades, with a total enrollment of 13,418. The average salary of white teachers in the State in 1909 was \$43 and of colored teachers, \$28. There were 10,093 teachers in the schools of the State. The value of the school property was \$7,192,575. The total expenditure for school purposes in the same year was \$4,431,370.

**POLITICS AND GOVERNMENT.** The legislature was in session in 1910 and the most important measures passed will be found in the section *Legislation* below. On January 25 the legislature re-elected John W. Daniel to the United States Senate. Senator Daniel died on June 29, and on August 1 Governor Mann appointed as his successor Claude A. Swanson, a former governor. Unlike most of the States Virginia held no election for governor in 1910 as Governor Mann's term does not expire until February 1, 1914. The election for members of Congress resulted in the uniform success of the Democratic candidates with one exception. C. Bascomb Slemple, Republican, was elected from the 9th district defeating Henry C. Stuart, Democratic candidate, but the latter reduced a Republican majority of more than 4000 to about 250. The legislature authorized the appointment of a State Tax Commission, to consider tax reform, the best method of equalization, to uncover intangible properties and to recommend whether it shall be advisable to segregate properties for taxation—allowing the cities and counties to collect and disburse revenues for all real and personal properties for schools, criminal expenses and municipal and county governments, the State to receive all revenues from railroads, carriers of all sorts, and licenses, and to pay all State expenses, including interest on the public debt, and pensions and to devote a stipulated sum for public education. That report will be submitted when the General Assembly meets in 1912. Dr. Douglass S. Freeman, Richmond, is the secretary of the commission. Colonel Morton Marye, for twenty-seven years auditor of public accounts, died December 22. He was succeeded by Captain S. R. Donohoe, of Fairfax. One of the significant acts of the Gen-

eral Assembly was the defeat of the Federal income tax amendment. The measure passed the Senate, but it met a stinging defeat in the lower branch of the legislature.

**LEGISLATION.** Among the important measures passed at the legislative session of 1910 were the following: Measures were passed providing for agricultural education in the State. The creation of drainage districts for the improving of swamp lands in the State was authorized. Acts were passed regulating the driving of automobiles in the State, setting a limit of 20 miles an hour in rural districts, and eight miles an hour on curves, hills and crossroads. Requirements for the admission to the practice of law and medicine were revised, and a board for the examination and registration of dentists was created. It was made a misdemeanor for parents or guardians of children under fourteen years of age to refuse to support them. A constitutional amendment was submitted extending the legislative session from sixty to ninety days. The corporation act of the State was generally revised and changed. An act was passed making it a misdemeanor to swear over the telephone or to abuse a person or his female relatives in such a manner as to lead to a breach of the peace. The electric chair was substituted for the rope in the carrying out the death penalty. Several important measures were passed relative to the punishment of criminals. One of these permits minors under 17 years of age, depraved or vicious, or convicted as first offenders of crimes to be placed in homes or institutions instead of jails. The release of prisoners on probation under the care of a police probationary officer appointed by the judge under the supervision of the State charity commission is also permitted. A law was passed requiring all practicing physicians to report all cases of contagious or communicable disease to the State Board of Health in order that it may send the patient proper instructions for regaining his health and preventing contagion. The Board of Health was vested with general power of making and enforcing regulations for promoting the public health, with respect to disinfection, isolation, sewage, investigation of disease and nuisances, and makes a violation of such regulations a misdemeanor. The liquor law of the State was revised and measures were passed permitting licensed incorporated country clubs, organized as social clubs, to dispense ardent spirits to members and to bona fide guests. The office of State accountant was created. He is to devise and promulgate uniform systems for all State departments and institutions, and to inspect frequently the books and vouchers in order to report thereon to the legislature. A tax commission was appointed for the examination of the existing tax system. The basis of the State tax on telephone companies was changed from a rate by the instrument to a rate depending on the gross receipts. Changes were made also in the taxation of insurance companies, express companies, water, gas, light and power companies. The legislature submitted a constitutional amendment, permitting the legislature to change the form of municipal governments, subject to the approval of the municipality affected. A law was passed permitting cities of 10,000 to provide separate playgrounds for children of white and colored races. Important legislation was enacted relating to white slaves, as a result of the agitation carried on in 1909-10.

**STATE OFFICERS.** Governor, William H. Mann, Democrat; Lieutenant-Governor, J. T. Ellyson; Secretary of Commonwealth, B. O. James; First Auditor, Morton Marye; Treasurer, A. W. Harman, Jr.; Superintendent of Instruction, J. D. Eggleston; Attorney-General, Samuel W. Williams; Commissioner of Agriculture, George W. Koener; Commissioner of Insurance, Joseph Button—all Democrats.

**JUDICIARY.** Supreme Court of Appeals: President, James Keith; Justices, S. G. Whittle, John A. Buchanan, George M. Harrison, and Richard H. Cardwell; Clerk of the Court, H. Stewart Jones—all Democrats.

**STATE LEGISLATURE, 1911.** Democrats, Senate, 34; House, 87; joint ballot, 121; Independents and Republicans, Senate, 6; House, 13; joint ballot, 19; Democratic majority, Senate, 28; House, 74; joint ballot, 102.

**VIRGIN ISLANDS.** A group of islands constituting a presidency of the Leeward Islands (q. v.). Area, 50 square miles. Population (1901), 4908. Births, (1908), 185 (80 illegitimate); deaths, 75; marriages, 27. Primary schools, 7, with 866 pupils; government grant £159. Cultivated area, 1000 acres. Cotton export (1908), 32,520 pounds. Imports (1908), £8629 (internal trade, £314); exports, £7150 (internal trade, £155). Tonnage entered and cleared, 14,422. Post-offices, 5. Revenue and expenditure for the year 1908-9, £4248 and £4693 respectively. No debt. Commissioner (1910), R. S. Earl.

**VITAL STATISTICS.** The following statistics were compiled from the Public Health Reports of the United States Marine Hospital Service. These figures, while admittedly incomplete and often misleading, particularly in the case of foreign countries, are the best obtainable.

**SMALLPOX.** There was a total of 26,763 cases of smallpox in the United States, with 329 deaths. The States suffering most heavily were: Alabama, 658 cases, 1 death; Colorado, 993 cases, 9 deaths; Florida, 287 cases, 1 death; Illinois, 556 cases; Indiana, 998 cases, 2 deaths; Iowa, 733 cases; Kansas, 2089 cases, 10 deaths; Louisiana, 711 cases, 9 deaths; Michigan, 2572 cases, 52 deaths; Minnesota, 962 cases, 9 deaths; Montana, 686 cases, 1 death; North Carolina, 3875 cases, 8 deaths; North Dakota, 307 cases, 2 deaths; Ohio, 739 cases, 4 deaths; Oklahoma, 2203 cases, 99 deaths; Tennessee, 658 cases, 4 deaths; Texas, 3044 cases, 69 deaths; Utah, 819 cases, 2 deaths; Virginia, 350 cases, 6 deaths; Washington, 471 cases, 14 deaths; Wisconsin, 263 cases. Among foreign countries considerable numbers of cases were reported from the following: Argentina, 662 deaths; Brazil, 1128 cases, 1530 deaths; Canada, 218 cases, 2 deaths; Chile, 550 cases; China, 245 cases, 248 deaths; Egypt, 1048 cases, 264 deaths; India, 44 cases, 1512 deaths; Italy, 811 cases, 76 deaths; Mexico, 64 cases, 268 deaths; Philippine Islands, 197 cases; Portugal, 1651 cases, 222 deaths; Russia, 3986 cases, 1809 deaths; Spain, 37 cases, 258 deaths; Straits Settlements, 693 cases, 233 deaths; Tripoli, 243 cases, 24 deaths; Uruguay, 1129 cases, 519 deaths.

**YELLOW FEVER.** There were no cases of yellow fever reported in the United States during 1910 and only 2 cases in the Panama Canal Zone, and these were imported from the West Indies. The South American countries visited are as follows: Brazil, 469 cases, 435 deaths;

Ecuador, 293 cases, 112 deaths; Mexico, 12 cases, 9 deaths; Venezuela, 21 cases, 9 deaths.

**CHOLERA.** There were 2 cases and 1 death from this disease in New York City, imported on incoming steamships. There were many thousands of cases in Russia and the East and a few in Europe distributed as follows: Arabia, 57 cases, 49 deaths; Austria-Hungary, 44 cases, 19 deaths; China, 28 cases, 273 deaths (reported simply as "present" several months in the year); Germany, 36 cases, 16 deaths; India, 1344 cases, 1127 deaths; Indo-China, 80 cases, 54 deaths; Italy, 656 cases, 247 deaths; Japan, 800 cases, 393 deaths; Java, 2488 cases, 1552 deaths; Korea, 72 cases, 41 deaths; Madeira, 77 cases; Persia, 364 cases, 241 deaths; Philippine Islands, 9537 cases, 6890 deaths; Russia, 214,174 cases, 99,581 deaths; Servia, 11 cases, 3 deaths; Siam, 888 cases, 1031 deaths; Straits Settlements, 116 cases, 111 deaths; Tripoli, 253 cases, 198 deaths; Turkey, 572 cases, 299 deaths; Turkey in Asia, 2552 cases, 1764 deaths.

**PLAGUE.** Two cases and 1 death occurred in the United States—in California. In foreign countries the disease was distributed as follows: Arabia, 10 cases, 5 deaths; Argentina, 38 cases, 17 deaths; Brazil, 149 cases, 124 deaths; China, 114 cases, 3099 deaths; Chile, 303 cases, 96 deaths; Ecuador, 620 cases, 226 deaths; Egypt, 1097 cases, 448 deaths; Great Britain, 6 cases, 5 deaths; Hawaii, 11 cases, 8 deaths; India, 570,843 cases, 436,440 deaths; Indo-China, 121 cases, 53 deaths; Japan, 83 cases, 53 deaths; Manchuria, 335 cases, 321 deaths; Mauritius, 255 cases, 146 deaths; Russia, 633 cases, 453 deaths; Siam, 131 cases, 121 deaths; Turkey in Asia, 175 cases, 167 deaths; Venezuela, 17 cases, 13 deaths.

**DEATH RATE.** According to the "Bulletin of Mortality Statistics" for 1909, issued by the Census Bureau of the Department of Commerce and Labor, the total number of deaths in the registration area of the United States (comprising about one-half of the population) was 732,538. The death-rate per thousand was 15 (or, according to the revised figures, 14.4), the lowest ever recorded. Of this total 398,597, or 54.4 per cent., were males, and 333,941, or 45.6 per cent., females; while 732,538, or 26.8 per cent. of the deaths were among children under 5 years of age, and 140,057, or 19.1 per cent., were infants under one year of age.

During 1910 the total deaths from all causes reported to the Department of Health of the City of New York numbered 76,742, making a death-rate of 15.98 per thousand. This rate is a little lower than that of 1909 (16 per thousand), and is the lowest recorded for the city. Upon analysis it is found that all causes of death which are amenable to sanitary control show a decrease, being the following: Tuberculosis, with a decrease of 1840; diarrhoeal diseases, under five years of age, 1151; diphtheria and croup, 608; typhoid fever, 258; whooping cough, 167; measles, 165; malarial fevers, 93; smallpox, 89; scarlet fever, 32. Other prominent causes showing decrease were apoplexy, 1974; pneumonia, 2203; acute bronchitis, 850; Bright's disease and acute nephritis, 1317; accidental deaths, 733, and suicides, 153. The diseases showing increases were: Cancer, 230; organic heart disease, 93; cirrhosis of the liver, 25; appendicitis, 23; and homicides, 63. The deaths of children under five years of age numbered 6022 less than during the preceding year. During

1910 there were 129,080 births, the greatest number ever reported in New York city, corresponding to a birth-rate of 26.55 per thousand of the population. The marriages reported were 46,417, an increase of 4904 over 1909. See paragraph on population in articles on countries.

**VIVISECTION.** Anti-vivisection agitation was kept up largely through the efforts of one New York newspaper in that State, and two bills were presented to the legislature and an attempt made to establish a commission to investigate the practice of vivisection and animal experimentation. The commission was to consist of seven persons: two physicians or scientists, two active anti-vivisectionists, two lawyers, and one member at large. The American Medical Association, through its council on the defense of medical research, had already made a careful investigation of all American medical schools and laboratories in which animal experimentation was carried on. This investigation showed that every care is taken to avoid the infliction of pain on animals used for experimental purposes, and reliable safeguards against the careless use of animals are already in existence. Practically all of the laboratories engaged in research had voluntarily adopted regulations which governed the conditions under which animals were used for experimentation, and the responsibility had been placed on the directors of the laboratory. Any procedure involving a degree of suffering greater than that accompanying anesthetization can be used only with the director's permission. Such regulations have been in force in some institutions for many years. It is interesting to note that, according to British experience, the discovery of satisfactory conditions in the medical laboratories has no effect in allaying the antivivisection agitation, for although conditions in these institutions have been shown again and again to be humane, antivivisection societies have multiplied, and at present there are fifteen societies in Great Britain energetically striving for the absolute abolition of animal experimentation.

**VOCATIONAL EDUCATION.** See EDUCATION IN THE UNITED STATES.

**VOGÜÉ, EUGÈNE MARIE MELCHIOR**, Vicomte de. A French littérateur and academician, died in March, 1910. He was born at Nice in 1848. He served in the French army during the Franco-Prussian War. He was successively attached to the French embassy at Constantinople, the legation in Egypt and the embassy at St. Petersburg. At the latter Court he passed seven years and in 1882 gave up the diplomatic service to devote himself to literature. In 1888 he was made a member of the French Academy. It was largely through his efforts that Russian novelists first became known in France and afterwards throughout the English speaking world. He was a regular contributor to the *Revue des Deux Mondes*, and wrote for other periodicals. His more important publications include: *Syrie, Palestine, Mont Athos* (1876); *Histoires orientales* (1879); *Le roman russe* (1886); *Regards historiques et littéraires* (1892); *Heures d'histoire* (1893); *Cours russes* (1894); *Le rappel des ombres* (1900); *Pages d'histoire* (1902); and the novel *Les morts qui palent* (1899).

**VON AEHRENTHAL**, Count. See AUSTRIA-HUNGARY.

**VON BIENERTH**, Baron. See AUSTRIA-HUNGARY.

**VON LEYDEN, ERNST** A German pathologist, died, October 5, 1910. He was born in Danzig, in 1832 and was educated at the Friedrich Wilhelm Institute at Berlin. From 1854 to 1865 he served as a military surgeon and in the latter year became a professor in the medical school at Königsberg. In 1872 he went, in the same capacity, to the University of Strassburg and in 1876 he was appointed as successor to Ludwig Traube, the famous German clinician at Berlin. He was an eminent authority on cancer. He contributed many articles to the *Zeitschrift für klinische Medizin*, a medical magazine which he helped to found in 1879. His best known work is *Klinik der Rückenmarkskrankheiten*. He was a member of the Foreign Medical Society, the Institute of France and the Academy of Upsala.

**VORSE, ALBERT WHITE**. An American author and editor, died June 15, 1910. He was born at Littleton, Mass., in 1866 and graduated from Harvard College in 1889. He engaged in journalism and in 1891-3 served on the staff of the *Philadelphia Press*, accompanying the Peary Relief Expedition to Greenland in 1892 as a representative of that paper. In 1893-4 he was music critic of the *New York Mail and Express* and from 1894 to 1896 was literary editor of the *Boston Commonwealth*. He acted for a short time as dramatic editor of the *Illustrated American* and as literary adviser to G. P. Putnam's Sons. In 1900-1 he was associate editor of the *Criterion*, and was assistant managing editor of the *New International Encyclopedia* from 1901 to 1903. He was a member of the American Geographical Society and the National Geographic Society. He was the author of *The Laughter of the Sphinx* (1900) and of the chapters on "Japan under the Constitution" in the volume on Japan in the "Story of the Nations" series.

**VOSE, GEORGE LEONARD**. An American educator and engineer, died April, 1910. He was born in 1831 and was educated at the Lawrence Scientific School. From 1860 to 1864 he was associate editor of the *American Railway Times*, and from 1872 to 1882 was professor of civil engineering at Bowdoin College. From 1882 to 1886 he occupied the same position at the Massachusetts Institute of Technology.

**WADDELL, LOUISE (FORSSLUND)**. An American writer, died May 2, 1910. She was born in 1873. Her first published work was *The Story of Sarah*, and it was followed by *The Ship of Dreams* and other stories of Long Island. In 1907 she married Charles Carey Waddell. She was a graduate of Packer Collegiate Institute.

**WAGES, RAILWAY EMPLOYEES'**. See RAILWAYS.

**WAKE, CHARLES STANILAND**. An English anthropologist, died June 22, 1910. He was born in Kingston-upon-Hull, England, in 1835, and was educated at Hull College. He was for a time a director of the Anthropological Institute of Great Britain and Ireland and was a member of the general committee of the British Association for the Advancement of Science. In 1895 he became connected with the Field Museum of Natural History, Chicago, and this connection continued until the time of his death. Among his published writings are *Chapters on Man* (1862), *The Evolution of Morality* (1878), *The Origin and Significance of the Great Pyramid* (1882), *Serpent Worship and Other Essays* (1888), *The Development of Marriage and Kinship* (1889), *Vortex Philosophy, or the Geometry*

of *Science* (1907). He edited the *Memoirs of the Congress of Anthropology* (Chicago, 1893-4) and contributed articles on anthropology, sociology and philosophy to scientific and technical journals.

**WALSH, MICHAEL.** A Roman Catholic educator and editor, died, October 7, 1910. He was born in Kilkenny, Ireland, in 1835 and after having graduated from St. Kyrnes's College he entered Maynooth University in 1853. Here he remained eight years and was first honor man in all his classes. He was for several years thereafter a professor in Carlow College. In 1866 he came to New York and established St. Stephen's Latin School. He became a special writer for several New York papers and in 1873 was made editor of the *Sunday Democrat*, of which he later became proprietor. In 1889 he founded the *Catholic Herald* as the special organ of the Holy See in America. In 1902 he retired from the management of the *Sunday Democrat* and the editorship of the *Catholic Herald*. At that time Cardinal Gibbons and other prelates organized a subscription to which many of the best known clergymen and laymen contributed. The amount raised was \$20,000.

**WALSH, THOMAS F.** An American mine owner and financier, died April 8, 1910. He was born in Ireland in 1851, and at the age of eighteen emigrated to America where he worked for several years as a laborer. By his shrewdness in taking sub-contracts he soon accumulated a small sum of money. In 1873 he removed to the west and engaged in mining in the Black Hills. He was successful and in 1879 went to Leadville, Colo., at the height of the mining prosperity of that city. He there opened a hotel which at once became a great money-making investment. He also prospected for mines, and against the advice of miners located claims in the higher altitudes, among them the famous Camp Bird properties, which soon made him a man of enormous wealth. These mines were later sold to an English syndicate. In 1899 he was appointed commissioner for Colorado to the Paris Exposition, and his lavish expenditures in Paris made him an object of great attention. He made the acquaintance of King Leopold of Belgium, who had mining properties in the Belgian Congo, which he wished developed on American lines. Mr. Walsh became a partner with the King in the development of these properties. Mr. Walsh was noted for his democratic demeanor and was known widely throughout the country as Tom Walsh. His home in Washington was one of the show places of the capital.

**WALTER, ARTHUR FRASER.** An English newspaper proprietor, died, February 22, 1910. He was born near Wokingham in 1846. His great-grandfather, grandfather and father had been successively chief proprietors of *The Times*, which was founded by the first John Walter in 1785 as the *Daily Universal Register* and re-

named *The Times* at the beginning of 1798. He was educated at Eton, and at Christ Church, Oxford, graduating from the latter in 1870. On the death of his elder brother in 1870 he became the destined successor of his father in the management and chief proprietorship of *The Times*, a position which, under the will of the founder of the journal, had always been held by the head of the family of Walter. He accordingly entered at Lincoln's Inn and was called to the bar in 1875, although he never practiced. Shortly after taking his degree at Oxford he became associated with his father in the management of *The Times* and in 1880 he was formally appointed joint manager. From that time forward his whole life was given to *The Times*. On the death of his father in 1894 he became in turn manager and chief proprietor, and retained the latter position until 1908, when he exchanged it for that of chairman of The Times Publishing Company, which was formed as the result of suits instituted in the Law Courts for the purpose of adjusting the conflicting rights and interests of the several proprietors of the journal. At that date *The Times* was owned by a large number of proprietors without definite liability or sufficient responsibility. In consequence of the action of some of these proprietors the courts declared that the position of all parties should be regularized by the Limited Liability Acts. This was done by the formation of The Times Publishing Company, with a capital of £750,000, and of this company Mr. Walter was chosen chairman. He rarely came before the public, and following the unbroken tradition of his family, was content to efface his own personality in the anonymity of *The Times*. He had a large estate near Wokingham and took considerable interest in local affairs.

**WARD, Mrs. HUMPHRY.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**WARD, JOHN QUINCY ADAMS.** An American sculptor, died May 1, 1910. He was born at Urbana, O., in 1830. He studied law, but his inclinations led him towards sculpture, and in 1850 he began to study under H. K. Browne. At the end of seven years, he began executing figures which received much commendation. Chief of these was the equestrian statue of Washington in Union Square, New York. In 1857-59 he lived in Washington, where he executed busts of Alexander Stephens, Joshua R. Giddings, John P. Hale, Hannibal Hamlin and others and in 1861 he opened a studio in New York. Perhaps the most noteworthy of his works is the statue of "The Indian Hunter" in Central Park, New York. Among his other works in the same park are: "The Pilgrim," "Shakespeare," and "A Seventh Regiment Soldier." Other of his works in New York City are the statue of Washington in front of the Sub-Treasury Building, the William E. Dodge statue at Broadway and Sixth Avenue, the statue of Henry Ward Beecher in Brooklyn, and the Greeley statue in Post Office Square. He also executed the "Crowning Group of Victory" for the naval arch erected in New York City for the reception of Admiral Dewey. For some years previous to his death he was at work on the equestrian statue of General Sheridan, but this, owing to a disagreement, was not completed.

JOHN QUINCY ADAMS WARD

Mr. Ward was one of the few eminent American sculptors who never studied abroad. He was one of the founders of the National Sculpture Society and was its president for several years. He was also prominent in the National Academy of Design, of which he was president in 1874.

**WARNER, ADONIRAM JUDSON.** An American soldier and public official, died August 13, 1910. He was born at Wales, N. Y., in 1834 and was educated at Beloit, Wisconsin, and at New York Central College. He acted as principal of several schools in Pennsylvania from 1856 to 1861. In the latter year he enlisted in the Tenth Pennsylvania Reserves and in 1862 was made lieutenant-colonel. He served through some of the most important battles of the Civil War and was severely wounded at Antietam. In 1863 he was made colonel of the Veteran Reserve Corps, but resigned in 1865. In the same year he was brevetted brigadier-general. After the close of the war he built steam and electric railways, opened coal and iron mines and developed water power for generating electricity. He was a member of Congress from 1879 to 1881 and from 1883 to 1887. He was a strong advocate of bimetalism and was president of the Bimetallic Union from its organization. He wrote *Appreciation of Money* (1877) and *Source of Value in Money* (1882); also various pamphlets and monographs on different subjects.

**WARNER, BEVERLY ELLISON.** An American Protestant Episcopal clergyman and writer, died November 27, 1910. He was born in Jersey City, N. J., in 1855. He was educated at Princeton College and at Trinity College, graduating from the latter institution in 1876. He studied theology at the Berkeley Divinity School and was ordained priest in 1880. From 1879 to 1880 he was rector of a church in South Manchester, Conn. After filling other pastorates in Connecticut he was in 1893 chosen rector of Trinity Church in New Orleans, a position which he held until the time of his death. He was a delegate to several general conventions and was president of the standing committee of the diocese of Louisiana. He lectured and wrote much on literary and sociological topics and was the author of *Troubled Waters* (1885); *English History in Shakespeare's Plays* (1894); *The Facts and the Faith* (1897); *The Young Man in Modern Life* (1902); *The Young Woman in Modern Life* (1905); and *Famous Introductions to Shakespeare's Plays* (1906). He was the administrator of Tulane University in 1897.

**WARWICK, C. F.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**WASHINGTON.** One of the Pacific Division of the United States. Its area is 69,127 square miles. Its capital is Olympia.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 1,141,990 as compared with 518,103 in 1900 and 357,232 in 1890. The increase in the decade 1900 to 1910 was 120.4 per cent. This is the highest rate of increase shown in any of the States. The State ranks thirtieth among the States in point of population, whereas in 1900 it ranked thirty-

fourth. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The chief mineral product of the State is coal. There were produced in 1909, 3,576,356 short tons as compared with 3,024,943 short tons in 1908. The production in 1910 was estimated by the United States Geological Survey at 4,500,000 tons. Gold was produced to the value of \$711,359 as compared with a value of the product of 1908 of \$429,000. Of silver, 176,816 fine ounces were mined as compared with 76,200 fine ounces in 1908. There were produced 120,611 pounds of copper in 1909 as compared with 162,201 pounds in 1908. The stone products are valuable, amounting in 1908 to \$1,367,191. Of these, granite composed the greater part. Other mineral products are coal products, coke, lime, sand and gravel.

**AGRICULTURE.** The acreage, production and value of leading crops for 1909 and 1910 are given in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	16,000	448,000	336,000
1909.....	15,000	417,000	359,000
Winter wheat, 1910	676,000	13,858,000	10,809,000
1909	780,000	20,124,000	18,715,000
Spring wheat, 1910	810,000	11,745,000	9,161,000
1909	760,000	15,856,000	14,560,000
Oats, 1910.....	206,000	8,817,000	4,232,000
1909.....	202,000	9,898,000	4,751,000
Barley, 1910.....	186,000	5,394,000	3,075,000
1909.....	182,000	7,189,000	4,601,000
Rye, 1910.....	6,000	123,000	109,000
1909.....	4,000	84,000	79,000
Potatoes, 1910.....	39,000	5,109,000	3,730,000
1909.....	41,000	6,970,000	3,276,000
Hay, 1910.....	388,000	815,000a	12,796,000
1909.....	380,000	798,000	11,172,000

a Tons.

**EDUCATION.** The number of children of school age in the State in 1910 was 268,972. The enrollment in the schools was 215,688 and the average daily attendance was 156,064. There were 7170 teachers employed. Of these 5736 were females and 1434 were males. The total value of all the school property in the State was \$19,069,112. The total expenditures for the schools were \$11,017,983. The average monthly salary of male teachers was \$70.56 and of female teachers was \$62.95. During the biennial period 1908-10 there were many important developments in educational progress in the State. An educational campaign for better rural school conditions was carried on. Many modern school houses were constructed. Schools for defectives were established in districts of the first class. There was a rapid development of high schools and the attendance of summer schools doubled.

**FINANCE.** The report of the State treasurer for the biennial period 1908-10 showed a balance in the treasury on October 1, 1908 of \$316,426. The total receipts during the same period were \$6,743,042 and the total disbursements, \$6,119,741, leaving a balance of cash on hand September 30, 1910, of \$623,301. The principal disbursements were for education, for the maintenance of State government and for the support of State institutions.

#### POLITICS AND GOVERNMENT

There was no regular session of the State legislature in 1910 as the sessions are biennial and the last was held in 1909. The next session begins January 10, 1911.

**ELECTIONS.** Washington differed from the majority of the States in that no election for governor was held in 1910. The term of Governor Hay does not expire until January, 1913. The chief interest in the elections was in the vote for United States Senator to succeed Senator Piles. The insurgent Republicans are strong in the State and their candidate for senatorial nomination was Representative Miles Poindexter, who was one of the most aggressive insurgent representatives in Congress. His opponent was Judge Thomas Burke, of Seattle. Mr. Poindexter won in the primaries September 13, by a plurality of 40,000, carrying all but two counties in the State. The insurgent candidates carried all the congressional districts, except one.

The most important issue in the election of November 8 from a local as well as a national standpoint, was the constitutional amendment granting suffrage to women. This amendment was carried by over two to one, making Washington the fifth State in the Union to give the elective franchise to women. In the elections for Congress W. E. Humphrey, Republican "standpatter," was elected in the first district, defeating W. W. Black, Democrat; Stanton Warburton, Republican insurgent, was elected in the second district, defeating Maurice Langhorn, Democrat, and William L. Lafollette, Republican insurgent, defeated H. D. Monrit, Democrat, in the third district.

**OTHER EVENTS.** On March 2, a most destructive avalanche, when measured by the loss of human lives, swept down the Cascade mountains at Wellington on the Great Northern railroad and carried with it two trains into the canyon, 200 feet below, and buried 70 passengers alive; all were killed. On October 8, a petition was circulated in Seattle for the recall of Mayor Gill. The Seattle charter provides for this measure when 25 per cent. of the registered voters at the last election sign a recall petition. The petition declared the mayor had shown himself incompetent, unfit and as abusing his powers. On December 22 the petitioners were counted and found to be 11,443, or more than enough for the recall; the election was set for February 7, 1911. In December a commission form of government was adopted by Spokane; many women registered to vote for this measure and two-fifths of those registered cast their ballot.

Forest fires raged in different parts of the State in August and September, causing great damage and some loss of life.

**LEGISLATION.** Among the important measures enacted at a special session in 1910 were the following: The legislature passed a radical act requiring an affidavit of physical fitness for marriage, stating freedom from tuberculosis, and in the case of the male, from any contagious disease. It prohibits the marriage of drunkards, criminals, epileptics, feeble minded, imbeciles, idiots, insane, or those afflicted with hereditary insanity. The prohibition does not extend to females over 45 years of age or males who are to marry them. An act was passed providing for the formation of commercial waterways districts on petition to the Board of County Commissioners signed by owners of a majority of the land area in the proposed district. The commissioners submitted the matter to a vote. If adopted three waterways commissioners are elected annually, to direct, within the district, the improvement of rivers and water courses, the construction of locks,

canals and dikes, the acquisition of rights of way and similar matters. The expenses of the improvements are borne partly by the assessment of betterments and partly by the issue of bonds.

**STATE OFFICERS.** Governor, M. E. Hay, Republican; Lieutenant-Governor, vacant; Secretary of State, I. M. Howell, Republican; Treasurer, John G. Lewis, Republican; Auditor, C. W. Clausen, Republican; Adjutant-General, George B. Lamping, Republican; Superintendent of Public Instruction, Henry Dewey, Republican; Attorney-General, W. P. Bell, Republican; Commissioner of Public Lands, E. W. Ross, Republican; Commissioner of Insurance, J. H. Schively, Republican.

**SUPREME COURT.** Chief Justice, Frank J. Rudkin; Associate Justices, R. O. Dunbar, H. D. Crow, M. A. Fullerton, W. Mount, M. F. Gose, S. J. Chadwick, George E. Morris and Emmett N. Parker—all Republicans; except Chadwick; Clerk, C. S. Reinhart.

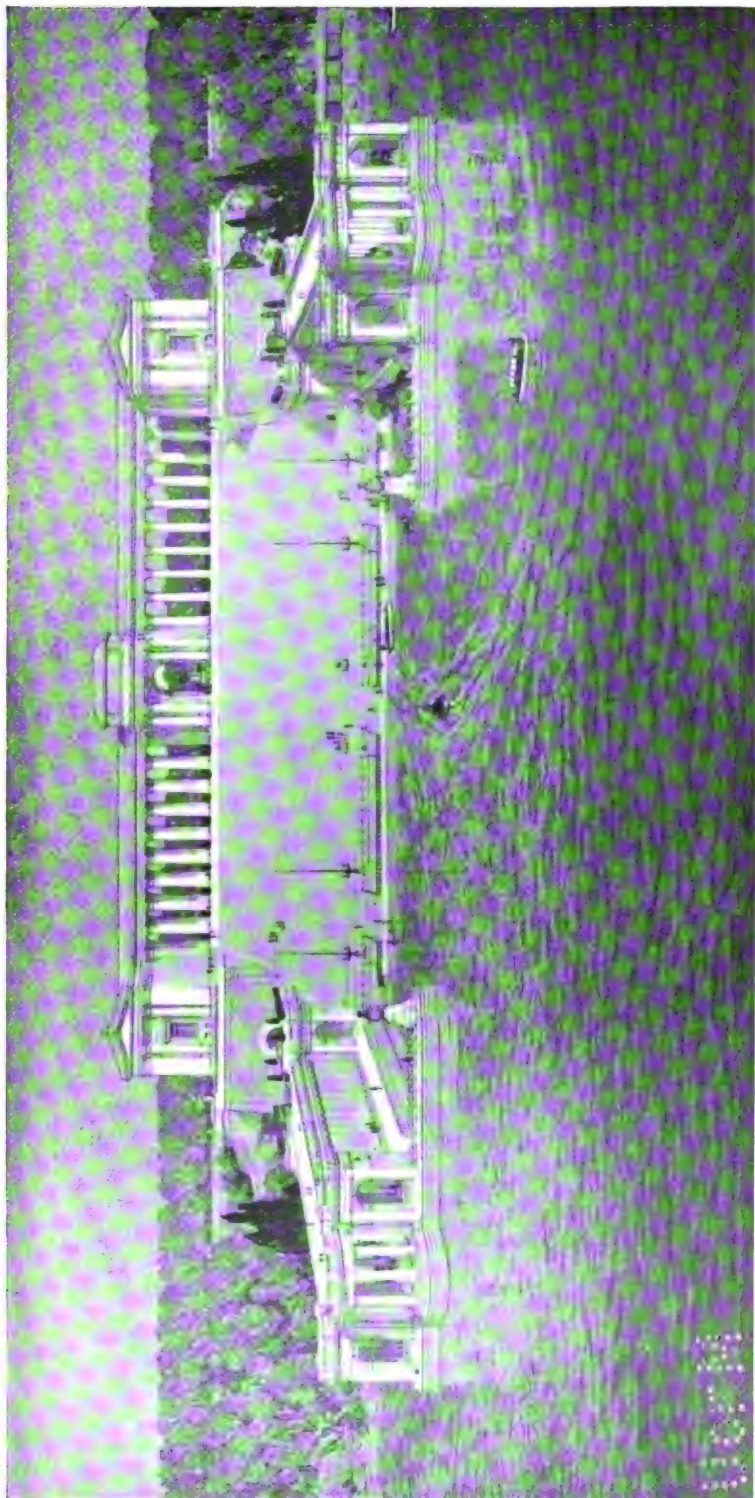

**STATE LEGISLATURE, 1911.** Republicans, Senate, 37; House, 84; joint ballot, 121. Democrats, Senate, 5; House, 12; joint ballot, 17. Republican majority, Senate, 32; House, 72; joint ballot, 104.

**WASHINGTON, BOOKER T.** See *LITERATURE, ENGLISH AND AMERICAN, Political and Social Science.*

**WASHINGTON, UNIVERSITY OF.** An institution of higher learning at Seattle, Washington, founded in 1862. The number of students enrolled in the several departments of the university in 1909-10 was 2156. The faculty numbered 113. A new department of Scandinavian Languages has been founded, of which Professor David Nyvall has been made the head. Professor Walter G. Beach has been appointed to the professorship of social science. During the year the Loretta Denny fellowships became available. These included a fund of about \$25,000, the income of which is awarded equally to three students in the graduate school upon the recommendation of the Committee on Advanced Degrees. The university is divided into the following colleges and schools: College of liberal arts, college of engineering, school of forestry, school of law, school of mines, school of pharmacy, graduate school, and the summer school. The department of journalism, which was established in 1907, has almost attained the importance of a separate school. This is true also of the department of education. The university conducts a summer school which is attended by many high school teachers and college graduates who are working for advanced credit, as well as by others. The university depends for maintenance upon money appropriated by the State legislature. The income for the year 1909-10 amounted to \$300,000. An income is also received from property situated in Seattle. This brings in about \$15,000 annually. The library contains about 42,000 volumes. The President is Thomas F. Kane, Ph. D.

**WATER-COLOR SOCIETY,** See *PAINTING.*

**WATER GATE, ROBERT FULTON MEMORIAL.** In 1905 the Robert Fulton Monument Association was organized for the purpose of erecting a suitable memorial in honor of the inventor. Cornelius Vanderbilt was made president and Richard Delafeld, vice-president. Various memorial schemes were suggested and discussed. The project of a monumental water gate on the Hudson proposed by Dr. Nicholas Murray Butler was finally accepted and designs were in-

H. Van Buren Magonigle, Architect

ROBERT FULTON MEMORIAL WATER GATE, NEW YORK CITY

34

vited. The State legislature passed a bill in 1907 giving the association the right to use the river bed at 114th to 116th Streets from the shore 700 feet into the stream. The city authorities also agreed to give land in Riverside Park at this point for the shore buildings and approaches.

In January, 1910, sixty-eight designs were offered in competition, the judges being William R. Mead, George B. Post, Thomas Hastings and John R. Pope. The successful design was by H. Van Buren Magonigle. It consists of a monumental building in Doric style on shore with a vast flight of steps and wings extending 600 feet into the river, thus affording a landing-place for vessels and, in the buildings, rooms for a naval museum and the public reception of distinguished guests. The estimated cost is \$3,000,000. The association expects to begin work in 1912.

**WATER, HARD, SOFTENING OF.** See CHEMISTRY.

**WATER PURIFICATION.** The most notable feature of water purification during the year was the installation of numerous hypochlorite plants for treating surface supplies liable to sewage pollution. Among these may be named plants for disinfecting the water supply of Milwaukee, Wis.; Minneapolis, Minn.; Toronto, and Montreal, Canada, and Nashville, Tenn. Many of the hypochlorite plants are for emergency use, pending the construction of filtration works; some of them (i. e. Harrisburg, Pa.; Quincy, Ill.; etc.) are supplementary to filters, particularly to mechanical filters making use of sulphate of alumina as a coagulant. The use of hypochlorite sometimes makes possible a reduction in the quantity of coagulant required more than sufficient to pay for the hypochlorite, while at the same time giving equal or better results than flow from the coagulant alone. It should be understood that the hypochlorite is used in minute quantities and as a germicide alone. As employed, it has no appreciable effect on suspended matter or color. The hypochlorite most generally used is hypochlorite of lime, or a high grade of bleaching powder. Hypochlorite of sodium, made electrolytically from salt, may be used where cheap electric current is available. The agent in either case may be applied to the water at the pumps or at any convenient point on a gravity supply main where a thorough mixing with the water will be ensured.

Notable advantages of hypochlorite treatment are: (1) the quickness and (2) the low cost of installation; also (3) the low cost of operation. Thus in two or three days an extempore plant and in as many weeks a serviceable permanent or semi-permanent plant may be put in operation, thus making the process of immense value in case of a sudden outbreak of typhoid fever which is believed to be due to the pollution of a public water supply.

Although the use of this disinfecting agent is by no means new, yet it did not come into wide use until 1910. Moreover, its utility or practicability for the continuous treatment of water was not recognized until its adoption by the contractor for a new water supply for Jersey City, N. J., in 1909. This came about through a lawsuit brought by Jersey City, alleging non-fulfilment of the purity clauses of the contract. The city urged that the company was bound to exclude the sewage of several small commun-

ities from discharge into the Rockaway River, above the storage reservoir at Boonton, N. J., or else to purify the sewage in question. The company maintained that the pollution was so small as to be negligible, but the court decided that although proven to be small yet the pollution afforded a possible danger which must be averted. The contractor therefore established a hypochlorite plant, then an innovation for such use. The city fought the acceptance of the plant as a fulfillment of the contract, but after considering the bacterial results afforded by the operation of the plant together with much expert testimony, a court ruling was made in 1910 to the effect that the hypochlorite plant satisfied the contract. The case may yet go to a higher court, however. For descriptions of numerous hypochlorite plants, see issues of *Engineering News* for 1910.

For the time, at least, hypochlorite is far in the lead of ozone as a destroyer of possible disease germs in water. None of the several makers of ozone apparatus has as yet succeeded in producing plants that combine simplicity, mechanical reliability and low construction and operation costs. As a rule, the germicidal efficiency of ozone plants has been high; but an investigation of the ozone plant at Lindsey, Ont., made by the Provincial Board of Health of Ontario and reported on twice in 1910, showed the ozone plant to be a failure, owing to the unreliable working of some of its parts. A lengthy illustrated review of ozone water-purification systems and results appeared in *Engineering News* for April 28, 1910. In the same journal for September 15, and December 8, 1910, there appeared descriptions of apparatus for the sterilization of water by ultra-violet rays. This new process must be considered as still in an experimental stage, although an examination of the last-named reference discloses a sectional sketch of an installation at Marseilles, France.

Finally, it should be noted that the old and tried processes of water purification continue to give satisfactory results. These include sedimentation, slow sand filtration and rapid or mechanical sand filtration. A coagulant (generally sulphate of alumina, but sometimes iron and lime) is used with rapid filters, and latterly this is supplemented with hypochlorite, as already stated. Sedimentation, alone or with a coagulant or a coagulant and hypochlorite also, is gaining in favor. The fine slow sand filtration plants built by the city of Philadelphia will have a combined daily capacity of 307,000,000 gallons, when additions to one of the smaller plants, under way in 1910, are completed. The plants range from 12,000,000 to 220,000,000 gallons in daily capacity, and their aggregate filtering area will be 86.95 acres, or more than one-eighth of a square mile. The introduction of filtrated water at Philadelphia, and also at Pittsburgh, Pa., has been followed by a marked reduction in the prevalence of typhoid fever. See CHEMISTRY, *Ultra-Violet Light*; and HYGIENE.

**WATER SUPPLY.** See WATER PURIFICATION and WATER WORKS.

**WATERWAYS, INTERNAL.** The movement for the development of internal waterways, while not attended with any sensational results in 1910, continued to receive attention both through the various organizations and through operations by government engineers. The Mississippi River Commission spent \$2,292,092 on this work during the fiscal year, while in addi-

tion to this further sums were spent in the maintenance of channels in that river and for special purposes in connection with its navigation.

In September the third annual convention of the Atlantic Deep Waterways Association was held at Providence, R. I. About 600 delegates were present from the States on the Atlantic seaboard. It was reported that the survey from Boston to North Carolina for this waterway had been practically completed. Estimates have been made for each section of the waterway and inlets, while the routes have been selected, except from Boston to Narragansett Bay. It was the belief of the association that this canal from Maine to Florida would not only increase the safety of vessels using it, but would remove barges and slow-going transports out of the way of ocean travel, and in this way make the Atlantic coast safer for line steamers. The next meeting of the association is to be held at Richmond, Va.

On December 7 the National Rivers and Harbors Congress convened at Washington. More than 3000 delegates were present. President Taft delivered the opening address. He declared that the problem which must be solved by the association and by Congress is the union and co-operation of railroads and rivers. He said that the terminal difficulties with respect to river transportation are the difficulties to be overcome before the question can be solved. See CONSERVATION AND DOCKS AND HARBORS.

**WATER-WORKS.** On the operating side of water-works increased attention is being paid to efficiency of service, and to reforms of accounting methods. A voluminous committee report on uniform accounting, with explanatory text and terminology, was presented to the American Water-Works Association in 1910 by Mr. Albert Mahr, of Baltimore, Md. The scheme presented is in general accord with the similar work done by the U. S. Census Bureau, under the direction of Mr. L. G. Powers, Chief Statistician. Forestry operations on land bought for the sanitary protection of public water-supplies are being conducted by a few cities and water companies. The use of metres for the reduction of water waste and as the only equitable way of distributing the cost of water-service is being extended. See also WATER PURIFICATION, and AQUEDUCTS.

**WEBSTER, SIDNEY.** An American lawyer and publicist, died May 30, 1910. He was born in Gilmanton, N. H., in 1828, and graduated from Yale College in 1848. He studied at the Harvard Law School and was admitted to the bar in 1851, taking up practice in Boston. He had been a warm friend of Franklin Pierce and on the election of the latter to the presidency Mr. Webster was made his private secretary, a post which he filled throughout Pierce's term. During this time he became intimate with many statesmen and public men. Three years after his service in Washington he removed from

Boston to New York, where he resumed the practice of law. He formed a partnership with James Craig. Following this he remained in active practice in New York City for more than thirty years. He made a specialty of customs law and international law, and came to be recognized as an authority in these branches. The most of his practice was in Federal cases. At the time of the Cuban insurrection in the late 60's he acted as counsel for the Spanish government and served that government in that capacity for several years. He had married the daughter of Hamilton Fish, who was at that time Secretary of State, and this relation taken in connection with his employment by the Spanish government caused him some embarrassment at the time of the *Virginian* case, when that American vessel, which was carrying arms and recruits to the rebels in Cuba, was seized by a Spanish man-of-war, and twenty of her passengers were shot. Mr. Webster was accused of having used his social and family influence in the aid of his client, the Spanish government, but he was able to show that this was not true. Mr. Webster was one of the lawyers who prepared the Tilden case before the Electoral Commission of 1877. He was several times offered the Democratic nomination to Congress, but refused. Mr. Webster became one of the most intimate friends of E. H. Harriman as a result of their association on several railroad directorates, and in 1908 Mr. Harriman wrote to Mr. Webster a letter criticizing President Roosevelt very frankly. The notes of this letter were stolen by the stenographer who had taken it and were afterwards published. This affair brought considerable notoriety to Mr. Webster and was a source of much discussion at the time. Mr. Webster was the author of *Two Treaties of Paris and the Supreme Court* (1901), and of monographs on topics of international and constitutional law. He was also a frequent contributor to newspapers.

**WEIGALL, A. E. P.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**WEIGHTS AND MEASURES.** Throughout the United States in 1910 considerable attention was being paid to the subject of weights and measures and this interest both occasioned and came as the result of vigorous attempts at the suppression of fraudulent weights and measures. Not only was attention being directed to palpable and direct fraud but various practices that had become common under the guise of trade customs were being attacked and the coöperation of honest merchants and manufacturers was being secured for their suppression. So widespread and serious were both evils that when active commissions and inspectors of weights and measures began to investigate the subject there was straightway aroused a vast public interest and as a result several State legislatures amended or passed new statutes aiming at stricter regulations and the use of correct standards. Then in many instances local or municipal authorities provided means to enforce properly such legislation. Thus in New York City where a peculiarly lax condition of affairs and inadequate support of the municipal bureau of weights and measures had been prevalent for many years, there was a vigorous effort made to enforce existing statutes and ordinances and a

widespread condition of false weights and measures was unearthed. These were both used in wilful fraud and also inaccurate, while so-called trade customs, such as false labels or branding had made common the use of arbitrary measures and various containers quite different from the values marked upon them or which were assumed by the purchaser. Throughout the State of New York, Dr. Fritz Reichmann, Superintendent of Weights and Measures, traveled and aroused the interest of local officials and the general public. This State duly revised and increased its laws bearing on the subjects of weights and measures and chapter 20 of the Consolidated Laws—General Business—was amended by the passage of Chapters 187 and 410 of the Laws of 1910. This chapter not only defined the various units of weight and measure, but also the duties of the various State, county and city officials charged with the custody of standards and the inspection. In 1909 other legislation on the subject had been passed so that New York was getting to a satisfactory condition so far as legal regulation of weights and measures was concerned. One of the most important innovations was provision for the sealing and marking of various glass jars used for the sale of milk.

In Massachusetts also important amendments were made to the very satisfactory laws governing weights and measures and improvements were being made in a very efficient system of inspection, under the direction of Daniel C. Palmer, Commissioner of Weights and Measures. In New Jersey also interest was being aroused and in many States old laws were being examined with a view to their enforcement while new statutes were being urged in many quarters. Each year there is a conference of State sealers of weights and measures at Washington at the National Bureau of Standards. The fifth of these conferences was held February 25, 1910, and was addressed by Secretary of Commerce and Labor, Charles Nagel. The problem of the systematic regulation of weights and measures was recognized as one of great perplexity on account of the different jurisdictions involved, but progress was being made in securing uniformity throughout the States of the Union. At each conference there are increased representation and evidences of greater interest by State administrations and the public at large.

**WEI-HAI-WEI.** A territory on the north coast of Shantung province, China, leased to Great Britain July 1, 1898, "for so long a period as Russia shall remain in possession of Port Arthur." Though Port Arthur is lost to Russia, a British commissioner (1910, Sir J. H. Stewart Lockhart) continues to administer the territory. Area, about 285 sq. miles; population, about 150,000. Revenue (1908-9), \$9716; expenditure, \$19,686; grant-in-aid, \$10,000.

**WEIR, LEVI CANDEE.** Former president of the Adams Express Company, died March 28, 1910. He was born in New Haven, Connecticut, in 1842, and when a boy removed to Cincinnati, where he became an expert telegrapher. He worked in St. Louis and Nashville. At the outbreak of the Civil War he joined the Military Telegraph Corps and for a time served under General Halleck. At the battle of Shiloh he performed services for which he was highly commended. Shortly before the close of the war he accepted an opportunity to enter the express business. Starting at the bottom he rose rapidly through the various stages of pro-

motion, and in 1894 was elected president of the Adams Express Company. He continued in this position until May, 1909, when he resigned on account of ill health. In addition to his express interests he was director in a number of financial institutions and railways.

**WELLESLEY COLLEGE.** An institution for the higher education of women, at Wellesley, Mass., founded in 1875. The number of students enrolled in the several departments of the college in 1910-11 was 1375, while the faculty numbered 125. During the year Associate Professors Elizabeth F. Fisher, geology; Malvina Bennett, elocution; Mary S. Case, philosophy; Vida D. Scudder, English literature; Eleanor M. Gamble, psychology; Alice V. Waite, English language and composition, and Margaret H. Jackson, Italian, were made full professors in their respective departments. The following instructors were made associate professors: Valentine J. Puthod, French; Edith R. Abbot, art; Louise S. McDowell, physics. The college received during the year \$60,461, the bulk of which is through the bequests of the late Ellen A. Kendall, of Boston; and the gift of a gymnasium at a cost of \$100,000 from the trustees, former pupils and friends of the Boston Normal School of Gymnastics. A library, at a cost of \$125,000, was presented to the college by Andrew Carnegie. The President, Caroline Hazard, resigned her office in July, 1910, and the dean of the college is in executive charge, pending the selection of the new president.

**WELLMAN, WALTER.** See AERONAUTICS.

**WELLS, H. J.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**WERNER, R. M.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**WESLEYAN METHODIST CONNECTION OF AMERICA.** An evangelical denomination of Methodist principles, founded in 1843 by members of the Methodist Episcopal Church, who strongly opposed the institution of slavery. According to the religious census made by the United States government in 1906, and published in 1910, the denomination numbered in 1906 20,043 communicants, with 533 ministers and 489 churches. The church property in that year was valued at \$37,117. The membership in 1910 was practically the same. Among the educational institutions under the control of the denomination are Houghton Seminary at Houghton, N. Y., Miltonvale College at Miltonvale, Kansas, and Central College at Central, S. C. The Indiana Conference has a school under its own control, but this will ultimately come under the denomination's control. The official paper of the denomination is the *Wesleyan Methodist*, published at Syracuse, N. Y. The highest authority of the church is the quadrennial General Conference, which meets in October, 1911.

**WESLEYAN UNIVERSITY.** An institution of higher learning at Middletown, Conn., founded in 1831. The number of students enrolled in the college of liberal arts in 1909-10 was 365, while the faculty numbered 35. The amount of productive funds of the university was \$1,665,000 and the income in 1909-10 was \$113,846. The college gave up its co-educational feature in 1909 and is now a college for men only. The President is William Arnold Shanklin, L. H. D., LL. D.

**WESTERN AUSTRALIA.** A state of the

**Australian Commonwealth.** Capital, Perth. Area, 945,920 sq. miles. Estimated population, June 30, 1910, 282,856. For details, see AUSTRALIA. The executive authority is vested in a governor, appointed by the British Crown, and assisted by a responsible ministry. The legislative power devolves upon a parliament of two elective houses, the Legislative Council and the Legislative Assembly. Governor in 1910, Sir Gerald Strickland; Premier, Frank Wilson.

**HISTORY.** The Premier, Sir Newton Moore, in an address on July 26 announced an increase of £383,000 in the revenue over last year and a surplus of £210,000. The programme of legislation included an extension of the franchise for the Legislative Council, liquor reform, redistribution of seats and plans for a new university. Toward the end of September the Ministry resigned and the premiership was taken by Mr. Wilson, formerly Minister of Works. Changes were made within the Cabinet, but its personnel remained the same. In his budget speech on October 25, the Premier pointed to the prosperity of the previous year and to the prospects for its continuance. Gold was discovered at Bullfinch and the new field promised well. In the latter part of November, Broome, the centre of the pearl industry, was partly destroyed by a cyclone.

#### WESTERN RESERVE UNIVERSITY.

An institution of higher learning at Cleveland, O., founded in 1826. The total number of students in the university in 1910-11 was 1302, divided as follows: Adelbert College, 405; College for Women, 303; Medical Department, 166; Law School, 168; Dental School, 88; Library School, 66; School of Pharmacy, 93. The faculty in 1909-10 numbered 228. Among the changes in the faculty during the year were the following: Joseph Leopold Borgerhoff was promoted to be Professor of Romance Languages; Howell Merri-man Haydn was promoted to be Professor of Biblical Literature; Charles Edwin Clemens was promoted to be Professor of the History and Theory of Music; James Elbert Cutler was promoted to be Professor of Sociology; Augustus Raymond Hatton was promoted to be Professor of Political Science. In Adelbert College, Charles Josiah Smith, Professor of Mathematics and Samuel Ball Platner, Professor of Latin, returned to the university after a year's absence. Noteworthy benefactions for the year included a new building for the College for Women, the gift of Mr. Samuel Mather and his children as a memorial to Mrs. Samuel Mather. It is to cost in excess of \$250,000. The college also received toward a \$1,000,000 additional endowment, \$250,000 from Mr. John D. Rockefeller and \$250,000 from Mr. H. M. Hanna. The requirement for admission to the Medical School was raised during the year. A college degree is now required for unconditional entrance. For conditioned entrance three years of college work are required and the degree of Bachelor of Arts must be secured before admission to the junior class in the Medical Department. Beginning with the year 1911-12 the Law School will be a graduate school. The resources of the university amount to \$5,000,000. The President is Charles F. Thwing.

**WEST VIRGINIA.** One of the South Atlantic Division of the United States. It has an area of 24,170 square miles. Its capital is Charleston.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 1,221,119 as compared with 958,800 in 1900 and 762,794 in 1890. The increase in the decade 1900 to 1910 was 27.4. The State ranks twenty-eighth in point of population, the same relative rank which it held in 1900. The population of the larger cities and towns will be found in the tables in the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** West Virginia is one of the most important of the States in the production of coal. There were produced, in 1909, 51,466,010 tons as compared with 41,897,843 tons in 1908. The State ranks second in the production of coal, being surpassed only by Pennsylvania. The production of coal in 1910 was estimated by the United States Geological Survey to have exceeded 60,000,000 tons. The increase is largely due to the benefit received from the shut down of the mines in Illinois on account of the strike. Most of this increase was in the southern portion of the State although the northern counties showed increased activity. West Virginia ranks second among the States in the quantity of coke produced. The production in 1909 was 2,637,132 short tons, valued at \$5,267,054. Large quantities of petroleum were produced. The production in 1909 was 10,745,092 barrels, as compared with a production in 1908 of 9,523,176 barrels. The value of the product of 1909 was \$17,642,283, as compared with a value in 1908 of \$16,911,865. The new oil developments of 1909 were largely confined to regions in which some development had already been made in 1908. The clay products of the State are important. These were produced in 1908 to the value of \$3,261,756.

**CHARITIES AND CORRECTIONS.** The charities and corrections of the State are under a Board of Control. The total expenditures for the expenses of this body during the year amounted to \$23,571. The institutions under the control of the State, with the expenditures for their support during 1910 are as follows: Miners' Hospital, No. 1, \$31,255; Miners' Hospital, No. 2, \$14,517; Miners' Hospital, No. 3, \$20,028; King's Daughters' Hospital, \$5335; West Virginia Asylum, \$91,441; Weston Hospital for the Insane, \$135,229; Second Hospital for the Insane, \$72,395; West Virginia Reform School, \$44,855; Industrial School for Girls, \$11,731; West Virginia Colored Institute, \$27,047; Bluefield Colored Institute, \$8577; West Virginia Colored Orphans' Home, \$2293; West Virginia School for the Deaf and Blind, \$56,760.

**AGRICULTURE.** The acreage, production and value of leading crops in 1909 and 1910 are given in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	920,000	23,920,000	\$16,266,000
1909.....	880,000	27,672,000	20,448,000
Winter wheat, 1910	410,000	5,125,000	5,228,000
1909.....	370,000	4,810,000	5,435,000
Oats, 1910.....	100,000	2,520,000	1,260,000
1909.....	98,000	2,156,000	1,164,000
Rye, 1910.....	12,000	155,000	140,000
1909.....	11,000	148,000	133,000
Buckwheat, 1910...	25,000	575,000	443,000
1909.....	22,000	499,000	379,000
Potatoes, 1910....	41,000	3,772,000	2,527,000
1909.....	39,000	3,822,000	2,599,000
Hay, 1910.....	675,000	810,000a	12,150,000
1909.....	675,000	844,000	11,225,000
Tobacco, 1910....	20,000	12,800,000b	1,318,000
1909....	14,400	12,600,000	1,663,000

a Tons. b Pounds.

**FINANCE.** The report of the treasurer for the fiscal year ending September 30, 1910, showed a balance in the treasury on October 1, 1909, of \$724,200. The receipts during the year were \$4,011,918, and the total disbursements amounted to \$3,858,437, leaving a balance on hand at the end of the year of \$877,680. The disbursements on account of the general school fund during the year amounted to \$873,976.

#### POLITICS AND GOVERNMENT

There was no session of the legislature in 1910, as the sessions are biennial and the last was held in 1909. The elections on November 8 were for members of Congress only, as the terms of Governor Glasscock and the other State officers do not expire until March 4, 1913. Although the State is normally Republican, and President Taft received a plurality of 26,451 votes in 1908, the Democratic wave which swept over the country included West Virginia, and a Democratic legislature, which has the election of a Senator in 1911, succeeded the Republican legislature of 1909. John W. Davis, Democrat, was elected for Congress in the first district by a plurality of 3408; W. G. Brown, Democrat, was elected in the second district by a plurality of 4485; Adam Littlepage for the third district by a plurality of 1566; John Hamilton, Democrat, was elected from the fourth district, and James A. Hughes, Republican, was elected from the fifth district by a plurality of 2853.

**STATE OFFICERS.** Governor, Wm. E. Glasscock; Secretary of State, Stuart F. Reed; Treasurer, E. L. Long; Auditor, John S. Darst; Attorney-General, Wm. G. Conley; Adjutant General, Chas. E. Elliott; Superintendent of Schools, M. P. Shawkey; Com. of Agriculture, J. M. Milan—all Republicans.

**JUDICIARY.** Court of Appeals: President, Ire E. Robinson, Republican; Associate Justices, George Poffenbarger, Republican; L. Judson Williams, Republican; Henry Brannon, Republican; William N. Miller, Republican; Clerk, W. R. Mathews.

**STATE LEGISLATURE, 1911** Senate, Democrats, 15; Republicans, 15. House, Democrats, 63; Republicans, 23. Joint Ballot, Democrats, 78; Republicans, 38. Democratic majority—Senate, 0; House, 40; Joint Ballot, 40.

**WHARTON, EDITH.** See **LITERATURE, ENGLISH AND AMERICAN, Fiction.**

**WHEAT.** **WORLD'S CROP.** The wheat crop of the world in 1910 was estimated at 3,500,000,000 bushels or about the same as the crop of year before.

The yield the world over was generally satisfactory and while drought interfered at times in certain countries, particularly in the United States, Russia, and Argentina, the production came well up to the average and the year as a whole stood second only to 1909 in total world production. Russia as in 1909 led all countries. The wheat acreage of Russia has increased from 42,000,000 to 71,000,000 during the last 15 years. With her large yield and with large supplies carried over from the heavy crop of 1909, Russia was by far the most important wheat exporting country of the world in 1910. The United States ranked next to Russia and was followed by France with a yield of 268,000,000 bushels and 16,120,300 acres. The French yield was considerably below the average, and the importation of about 55,000,000 bushels was required to supply the home demand.

**UNITED STATES.** The United States produced 695,443,000 bushels on 49,205,000 acres in 1910, as against 787,189,000 bushels on 46,723,000 acres in 1909. The total value of the crop based on the price per bushel on the farm December 1 of each year was \$621,443,000 in 1910 and \$730,646,000 in 1909. The winter wheat production of 1910 amounted to 464,044,000 and the spring wheat production to 231,399,000 bushels. The fall of 1909 was very favorable for sowing winter wheat. The soil was in good condition for the preparation of the seed bed and contained sufficient moisture for the prompt germination of the seed and for the production of a rapid and satisfactory fall growth. The crop went into the winter with the best prospects but the season proved severe and through alternate thawing and freezing a large loss in acreage had occurred by spring. Large acreage were abandoned in Kansas, Missouri, Nebraska, Illinois, Indiana, and Ohio. On the whole, however, such generally good weather favorable to the growth of the crop prevailed during the latter part of April and in May and June that the previous heavy setbacks were overcome. The experience of the year called attention very forcibly to the recuperative powers of the wheat plant when moisture conditions and the weather in general are favorable during the latter part of its growth. The yield per acre of winter wheat was particularly high in Wyoming, Oregon, Idaho, New York, Colorado, Montana, and Iowa, being 25, 23.7, 23.7, 23.7, 23, 22, and 21.2 bushels respectively, but none of these States has a very large acreage. The average yield per acre in the more important winter wheat growing States was heavy enough to make the general average for the country quite satisfactory as compared with other years. Kansas, the largest winter wheat producing State, suffered the greatest proportionate reduction in acreage and total yield. This State produced 61,060,000 bushels on 4,300,000 acres in 1910 and 85,478,000 bushels on 5,895,000 acres in 1909. Other important winter wheat States and their production in 1910 were as follows: Indiana produced 40,981,000 bushels on 2,627,000 acres; Nebraska 34,650,000 bushels on 2,100,000 acres; Illinois 31,500,000 bushels on 2,100,000 acres; Ohio, 31,493,000 bushels on 1,944,000 acres; Pennsylvania 27,697,000 bushels on 1,556,000 acres; Oklahoma 25,363,000 bushels on 1,556,000 acres, and Missouri, 25,130,000 bushels on 1,821,000 acres.

The spring wheat production of the country in 1910 amounted to 231,399,000 bushels and the area to 19,778,000 acres. Weather and soil conditions in the spring of 1910 were favorable to a good start of the crop. Owing to the comparatively light precipitation during the fall and winter, the soil moisture reserve was low and when later in the season dry weather prevailed the supply of soil moisture became inadequate and the condition of the crop was reduced, particularly in North and South Dakota and Minnesota. In North Dakota the average yield of spring wheat per acre was only 5 bushels, and the average for the entire country was only 11.7 bushels. Minnesota yielded 94,080,000 bushels; South Dakota 46,720,000 bushels; North Dakota 36,105,000 bushels; and Washington 11,745,000 bushels. The areas devoted to the crop in the States were 5,880,000, 3,650,000, 7,221,000, and 810,000 acres respectively.

## WHEAT PRODUCTION

The following figures are taken from the *Crop Reporter* published by the Bureau of Statistics, U. S. Department of Agriculture.

Countries	1909	1910
	Bushels	Bushels
United States .....	737,189,000	695,443,000
Canada .....	166,744,000	149,990,000
Mexico .....	10,000,000	10,000,000
Argentina .....	156,162,000	131,010,000
Chile .....	17,743,000	23,516,000
Uruguay .....	8,595,000	9,000,000
Austria-Hungary .....	186,076,000	258,905,000
Belgium .....	15,506,000	13,000,000
Bulgaria .....	32,071,000	49,126,000
Denmark .....	3,829,000	4,225,000
Finland .....	135,000	135,000
France .....	356,193,000	268,364,000
Germany .....	138,000,000	141,884,000
Greece .....	7,000,000	7,000,000
Italy .....	189,959,000	153,337,000
Montenegro .....	200,000	200,000
Netherlands .....	4,158,000	4,324,000

**WHETHAM, C. D.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**WHETHAM, W. C. D.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**WHISKY.** See LIQUORS, FERMENTED AND DISTILLED.

**WHITE, ANDREW D.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**WHITE, ANNA.** An American Shaker, the head of the North Family Shakers at Mount Lebanon, New York, died December 15, 1910. She was born in Brooklyn in 1831, the daughter of Robert White, a wealthy Quaker merchant of New York City. At the age of 18 she joined the Shakers and lived uninterruptedly at Mount Lebanon, first as a novice, then as a sister, and for thirty years prior to her death the head of the largest Mount Lebanon Shaker family. The fortune which came to her with the death of her father was devoted to the Shaker Society. She wrote the history of Shakerism and was identified with many outside progressive movements. She was president of the Peace Society, which held a great national reunion at Mount Lebanon in 1906, and when the Shaker women organized their branch of the Woman's Council of the United States she was elected its president. She opened a market for the handiwork of the Shakers of New York and other cities.

**WHITE, EDWARD DOUGLASS.** An American jurist, appointed December 11, 1910, Chief Justice of the Supreme Court of the United States. He was born in the parish of Lafourche,

La., in 1845 and was educated at the Jesuit College, New Orleans, and Georgetown University. He served throughout the Civil War in the Confederate army, and in 1868 was admitted to the bar. In 1874 he was elected a member of the State Senate and in 1878 was appointed associate justice of the supreme court of Louisiana. From 1891 to 1894 he was United States Senator from Louisiana. In the latter year he was appointed an associate justice of the Supreme Court of the United States. Justice White is a Democrat in politics and he is considered to be one of the most learned and efficient members of the Supreme Court. Although he is a Southerner by birth his record on the bench has shown at times strong Federal leanings. He sided with the minority in upholding the income tax when it was tested under the administration of Grover Cleveland, and also sustained the government in the insular cases. In the Northern Securities case, however, he joined with the minority in deciding against the government. These are the most important cases in which Justice White has participated. The appointment of Justice White as Chief Justice was generally approved throughout the country.

**WHITE, HORACE.** An American public official, who became on October 7 governor of New York to succeed Charles E. Hughes who resigned to become a member of the Supreme Court. He was born in Buffalo in 1865 and graduated from Cornell University in 1887. He graduated from the Columbia School of Law in 1889 and from 1900 practiced law at Syracuse. From 1896 to 1908 he was a member of the New York Senate and in 1909 was elected lieutenant-governor of the State.

**WHITE, J. C.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**WHITE SLAVE TRAFFIC.** See PROSTITUTION.

**WHITE, WILLIAM ALLEN.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**WHITING, LILLIAN.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**WHITMAN, CHARLES OTIS.** An American zoölogist, died December 6, 1910. He was born at Woodstock, Me., in 1842, and graduated from Bowdoin College in 1868. He studied at Leipzig, receiving the degree of Ph. D. in 1878. In the following year he was made a fellow of Johns Hopkins University. In 1880-81 he was professor of zoölogy at the Imperial University of Japan. He was stationed at the Naples Zoological Station in 1882, and from 1883 to 1885 was assistant in zoölogy at Harvard University. From 1886 to 1889 he was director of the Allis Lake Laboratory and from 1889 to 1892 was professor of zoölogy at Clark University. In 1892 he was appointed professor and head of the department of zoölogy, and curator of the zoölogical museum at Chicago University and he held this position until the time of his death. From 1888 to 1908 he was also director of the Marine Biological Laboratory at Woods Hole, Mass. He was an editor of the *Journal of Morphology*, of the *Biological Bulletin* and of *Biological Lectures*.

**WHITNEY, HARRY.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**WHITNEY, JAMES LYMAN.** An American librarian, died September 25, 1910. He was born at Northampton, Mass., in 1835, and graduated from Yale College in 1856. For a time he

held a place in Unity Library in Yale College. About forty years before his death he became connected with the Boston Public Library, and after steady promotion became chief librarian. Upon giving up that place in 1903 he was made chief of the department of documents and statistics, and of the department of manuscripts. During his service in the library he edited the Ticknor Catalogue of Spanish Literature and many other publications of the library. He was a member of various historical and literary societies.

**WHITNEY, MYRON W.** An American singer, died September 19, 1910. He was born at Ashby, Mass., in 1835. When he was sixteen years of age he went to Boston where, in 1858, he made his first appearance in a performance of the Messiah for the Handel and Haydn Society. For nearly ten years he sang in concerts. He then studied music in Florence, Italy, and London. In the latter city he made a special study of the oratorio with Randegger, and there gained a reputation as a concert singer, which caused his recall to Covent Garden after his return home. He made a tour of the United Kingdom under the direction of Benedict and Sullivan and finished afterwards a successful season in London. He then returned to the United States and made a tour of the country under the direction of Theodore Thomas. In 1876 he sang at the Centennial Celebration and at the Cincinnati Festival, held in 1877. Mr. Whitney's greatest success was in oratorio rather than in opera singing, and perhaps his greatest triumphs were at the concerts of the Handel and Haydn Society of Boston, the New York Oratorio Society and the Cincinnati festivals. His repertoire included "Elijah," "Israel in Egypt," "The Messiah," "Creation," "Tower of Babel," and "Damnation of Faust." He was for a time the principal bass in the Boston Ideal Opera Company and in the American Opera Company. He appeared in many of the Gilbert and Sullivan operas.

**WHITTREDGE, WORTHINGTON.** An American artist, died February 25, 1910. He was born in Ohio in 1820 and studied landscape and portrait painting in Cincinnati after leaving school. He went abroad in 1849 and continued his studies in London, Paris, Antwerp, Düsseldorf, and Rome until 1859. Returning to New York he opened a studio and became an associate member of the National Academy of Design. In 1862 he became a full member and was president of the Academy in 1875-6.

**WIGGIN, KATE DOUGLAS.** See DRAMA.

**WILCOX, D. F.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**WILL, AUGUST.** An American artist of German birth, died January 23, 1910. He was born at Weimar, Germany, in 1834 and came to the United States at the age of twenty-one. For thirty-eight years he was a teacher of art and numbered among his pupils many well known American artists. He maintained a studio at Broadway and Astor Place, New York City, for nineteen years. Many of his illustrations appeared in the *Century*, *Harper's*, and *Scribner's* magazines.

**WILLARD, DE FOREST.** An American surgeon and philanthropist, died October 15, 1910.

He was born in Newington, Conn., in 1846. He was educated in the public schools and studied medicine at the University of Pennsylvania, graduating in 1867. From 1889 to the summer of 1910 he was professor of orthopædic surgery in the University of Pennsylvania. He also acted as surgeon in several hospitals in Philadelphia. He was one of the most noted surgeons in the country and he held many offices of honor and distinction in learned societies. A large portion of his work was among the poor of Philadelphia. Among his published works are *Artificial Anæsthesia* (1891) and *Surgery of Childhood, Including Orthopædic Surgery*. He also contributed numerous articles to medical journals.

**WILLIAMS COLLEGE.** An institution of higher learning at Williamstown, Mass., founded in 1793. The total enrollment for the year 1910-11 was 560, of which number 535 were candidates for the degree of Bachelor of Arts and 25 for the degree of Master of Arts. The faculty numbered 57. The productive funds amounted to \$1,343,663 and the income for the year 1909-10 was \$63,962. The library contains about 67,000 volumes. The President is Harry A. Garfield.

**WILLIAMS, Sir EDWARD LEADER.** An English engineer, died January 1, 1910. He was born at Worcester in 1828 and began his professional career in that city. His formal education was obtained at private schools. He devoted his attention almost entirely to river and canal work and until 1850 was engaged in undertakings for improving the navigation of the waterway between Stourport and Gloucester. He afterwards acted as engineer of the Great Northern Railway which was then being constructed through Lincolnshire. For several years he was engaged on the works of the Admiralty Pier, Dover, and in 1856 became engineer to the River Weaver Trust. Here he made great improvements, including the construction of a lift to raise vessels vertically to a height of 52 feet from the Trent and Mersey Canal to the Weaver. When in 1882 it was decided to build the Manchester Ship Canal, Mr. Williams was called upon to assist in the preliminary survey and was afterwards appointed one of the joint engineers of the projected enterprise. His scheme for the construction of the canal was ultimately adopted. Its accomplishment required twelve years and throughout that period he acted as chief engineer. In the construction of the canal he encountered and overcame many engineering difficulties. He was the author of many papers on engineering subjects and contributed articles on canals to the *Encyclopædia Britannica*.

**WILLIAMS, GEORGE HENRY.** An American lawyer and public official, died April 4, 1910. He was born at New Lebanon, N. Y., in 1823 and was educated in the public schools and at Pompey Academy. He studied law in New York, and in Iowa, whither he removed in early youth. He was admitted to the bar in 1844. In 1847 he was elected judge of the first judicial district of Iowa and was presidential elector for Iowa in 1852. In the following year he was appointed chief justice of Oregon Territory and was a member of the constitutional convention which framed the constitution for that State. From 1855 to 1867 he was United States Senator from Oregon. He was a member of the High Joint Commission to settle the Alabama claims. From 1871 to 1875 he was Attorney-General of

the United States in General Grant's cabinet. He was nominated in 1873 for the Supreme Court of the United States, but the Senate refused to confirm him to that post. From that time on until shortly before his death he was continuously engaged in the practice of law in Portland, Oregon. From 1902 to 1905 he served as mayor of that city. He was the last survivor of the officials who served in President Grant's cabinet.

**WILSON, W. L.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**WINANS, SAMUEL ROSS.** An American educator, died July 25, 1910. He was born at Lyons Farm, N. J., in 1855, and graduated from Princeton College in 1874. From 1876 to 1881 he was tutor in Greek at Princeton. In 1881-83 he was adjunct professor in Greek and instructor in Sanskrit and from 1883 to the time of his death he was professor in Greek and instructor in Sanskrit. From 1889 to 1903 he was dean of the faculty of Princeton. He edited *Xenophon's Memorabilia* (1880), *Symposium* (1881), and *Libri Socratici* (1883).

**WINCHESTER, C. T.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**WINDOW GLASS TRUST.** See TRUSTS.

**WINDWARD ISLANDS.** The Windward, or southern, group of the British West Indian islands includes Barbados, St. Lucia, St. Vincent, Grenada (qq. v.), and the Grenadines (half under St. Vincent, half under Grenada). For administrative purposes all the separate colonies are under one governor and commander-in-chief (1910, Sir James Hayes Sadler), with headquarters at St. George's, Grenada; but each has its separate administrator and institutions. There is no common legislature, laws, revenue, or tariff.

**WINES.** See LIQUORS, FERMENTED AND DISTILLED.

**WINES, F. H.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**WINGFIELD, Sir EDWARD.** An English public official, died March 5, 1910. He was born in 1834 and was educated at Winchester and New College, Oxford. He was admitted to the bar in 1859. Six years later he was appointed one of the legal Assistant Under-Secretaries of State in the Colonial Office, and for many years he had special charge of West Indian business. In 1897, during the administration of Mr. Chamberlain, he became permanent Under-Secretary of State, but was obliged to retire at the end of three years on account of a paralytic stroke brought on by overwork. In 1899 he was created a K. C. B. and from 1897 to 1900 was Secretary of the Order of St. Michael and St. George.

**WINTER, WILLIAM.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**WIRELESS TELEGRAPHY.** The record

of wireless telegraphy in 1910 was such as to characterize it as a well established art in daily competition with other means of communication and well entrenched in its peculiar field. Much credit is due to the narrower ranges of tuning which have been attained and the clear transmission of the group frequency of 1000 per second. The quenched spark has come into quite general use and marks a reversion to an original type after ten years of experimentation with various substitutes.

The receiving circuits have tended to return to the simple two circuit tuner as the more complex arrangements have failed to produce superior tuning. Solid rectifiers have largely supplanted other types in detecting apparatus. Marconi has brought out a new valve receiver and a new electrolytic detector using an amalgam of tin that is worthy of note. Marconi also secured a patent on a duplex plan by which the sending and receiving devices are rendered operative and inoperative alternately in rapid succession, so avoiding the necessity of synchronism at the two stations.

The Marconi Company resumed transatlantic service and signals were received at its station in Argentina from Nova Scotia and from Ireland, a distance of 5600 miles. The Pacific has been practically covered as ships en route from America to Australia have been in touch with Honolulu throughout almost the entire journey. Under exceptional conditions a distance of 6500 miles has been attained but the daily working range of the best equipped stations is scarcely greater than 3000 miles.

Regular overland communication at distances of 1000 miles is now carried on. The use of wireless equipment has been successfully accomplished from aeroplanes, balloons, submarine vessels and railway cars.

The highly complicated state of patent litigation over wireless inventions in America has been a decided drag upon progress, both commercial and scientific. The technical research connected with space telegraphy has necessitated the working out of new concepts and much apparatus of extreme delicacy. It has been reaching a much sounder scientific basis than hitherto and relief from many of the crudities of present equipment is promised by the more novel and advanced researches in progress.

In addition to its employment for strictly commercial purposes, wireless telegraphy has brought relief, in at least six instances during the past year, to vessels in distress; in the absence of which succor, it is not at all certain that more than a few lives could have been saved. There is still room for improvement, however, in the power and completeness of the equipment of many passenger carrying vessels, as a recent instance on the Atlantic showed, where a steamer was not in communication for five or six days, and arriving two days overdue, reported that she was "too far away to send messages." This is hardly excusable in the present state of the art.

**WIRELESS TELEPHONY.** Throughout 1910 the field of wireless telephony remained practically barren of new achievements. Successful communication was carried on between French vessels over a distance of sixty-nine miles and Fessenden in America reported a distance of 200 miles. Statements have been published in the newspapers from time to time of successful communication

over considerable distances, but on investigation, these have usually turned out to have been due to the accidental existence of proper conditions, and a repetition of the trial proves unsuccessful, as the working of the apparatus can not be relied upon. Inventors seem still to adhere to the arc-and-microphone type of sending apparatus, and not much progress is reported.

**WISCONSIN.** One of the East North Central Division of the United States. It has an area of 56,066 square miles. Its capital is Madison.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 2,333,860 as compared with 2,069,042 in 1900 and 1,693,330 in 1890. The increase in the decade 1900 to 1910 was 12.8 per cent. The State ranks thirteenth in point of population, the same relative rank which it held in 1900. The population of the larger cities and towns will be found in the tables of the article UNITED STATES CENSUS.

**MINERAL PRODUCTION.** This State is not notable for its mineral production, and the most valuable single product is stone. The value of these products in 1908 was \$2,850,920. The State ranks second in the production of spelter and in 1909 20,381 tons were produced, as compared with a production in 1908 of 17,538 tons. The production of lead in 1909 amounted to 3238 tons as compared with a production of 4013 tons in 1908. The Menominee iron range, from which was produced in 1909 4,875,385 long tons of iron ore, is partly in Wisconsin and partly in Michigan. A small quantity of coke is produced and the production of lime is considerable. Other mineral products are sand and gravel, cement, pig iron and crystalline quartz.

**AGRICULTURE.** The acreage, production and value of leading crops for 1909 and 1910 are given in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	1,575,000	51,188,000	\$26,618,000
1909.....	1,533,000	50,589,000	30,353,000
Winter wheat, '10	67,000	1,340,000	1,233,000
'09	59,000	1,204,000	1,156,000
Spring wheat, '10	124,000	2,319,000	2,133,000
'09	120,000	2,280,000	2,189,000
Oats, 1910.....	2,320,000	69,136,000	23,506,000
1909.....	2,280,000	79,800,000	31,122,000
Barley, 1910.....	866,000	22,429,000	14,355,000
1909.....	866,000	24,248,000	13,579,000
Rye, 1910.....	305,000	4,880,000	3,465,000
1909.....	290,000	4,727,000	3,214,000
Buckwheat, 1910	14,000	196,000	147,000
1909	18,000	221,000	172,000
Flaxseed, 1910...	18,000	180,000	396,000
1909...	20,000	200,000	392,000
Potatoes, 1910...	200,000	24,700,000	9,386,000
1909...	262,000	26,724,000	10,155,000
Hay, 1910.....	2,260,000	2,260,000a	34,126,000
1909.....	2,369,000	3,625,000	34,800,000
Tobacco, 1910...	30,200	31,710,000b	2,378,250
1909...	31,500	37,170,000	3,419,000

a Tons. b Pounds.

**EDUCATION.** The latest statistics relating to education are those for the biennial period 1907-8. The total number of children of school age in the State in that period was 383,497 between the ages of 4 and 20. The total enrollment in public schools was 312,338. The number of teachers employed was 10,581, of whom 1291 were males and 9290 females. The average monthly salary of male teachers was \$64.27 and of female teachers, \$40.81. The total number of free high schools was 209; of State graded schools of the first class, 175; of the second

class, 253. The disbursements for the common schools in 1907-8 were \$10,694,294.

**FINANCE.** The report of the State Treasurer for the fiscal period 1908-10 showed a balance in the treasury on June 30, 1908, of \$1,728,047. The receipts for the two years amounted to \$23,507,463 and the disbursements to \$23,675,523, leaving a balance at the end of the fiscal year 1910 of \$1,559,987. The chief receipts were from railway companies, legacy tax, insurance tax and from State taxation. The chief disbursements were for education, State institutions and executive offices. The State debt at the end of the fiscal year 1908 amounted to \$2,251,000. Of this the larger part is included in the school fund.

**CHARITIES AND CORRECTIONS.** The names of the institutions under State control, with their populations and expenditures for the fiscal year ending June 30, 1910, are as follows: State Hospital for the Insane, 653, \$137,209; Northern Hospital for the Insane, 646, \$133,265; School for the Deaf, 192, \$58,625; School for the Blind, 78, \$32,404; Industrial School for Boys, 365, \$70,482; Wisconsin State Prison, 676, \$130,036; State Public School, 176, \$52,150; Home for the Feeble-minded, 942; \$147,739; Wisconsin State Reformatory, 218, \$42,071; State Tuberculosis Sanatorium, 88, \$67,301. During the year ending June 30, 1909, a number of additional buildings were constructed at the Sanatorium at Wales, which increased the capacity of that institution about 60. A \$75,000 addition was built at the Wisconsin State Reformatory, and a new school house was built at the School for the Deaf at a cost of about \$30,000. A new dormitory was constructed at the Industrial School to cost about \$35,000.

#### POLITICS AND GOVERNMENT

There was no meeting of the State legislature in 1910 as the sessions are biennial and the last was held in 1909. The next session begins January 11, 1911.

**CONVENTIONS AND ELECTIONS.** The year was of unusual political interest in Wisconsin both from a local and from a national standpoint. The municipal elections in April brought about a result surprising to those outside the State who were unfamiliar with the local conditions, in the election of a Social Democrat, Emil Seidel, as mayor of Milwaukee by a plurality of over 7000 votes. Mr. Seidel received 27,622 votes, his Democratic opponent, 20,513, and his Republican opponent, 11,262. In addition to the mayor, the Socialists elected large majorities in the Council and the Board of Supervisors, and the Socialists will control the municipal government for two years. The Socialist campaign was managed by Victor L. Berger, an alderman, who was one of the most prominent Socialists in the country. Mr. Berger was elected Representative to Congress in the election held on November 8. The platforms of all the parties called for the initiative and referendum, while the Socialist programme included municipal ownership of ice and lighting plants, 3-cent fare on the street railroads, cheaper bread, an 8-hour law, and work for the unemployed at union wages. The Socialist success in Milwaukee was not a sudden development. The vote of that party has grown steadily in the last decade. In 1908 it had become almost exactly one-third of the city vote and in 1910 it added 30 per cent. to its own record figures of 1900 leaving both Democrats

and Republicans behind. This condition was largely the result of general dissatisfaction with the city's administration and partly to a very active Socialist propaganda including a weekly house to house distribution of literature by trained squads of workers. Great influence was also exerted by Socialists who were already members of the City Council and by Socialist members of the Wisconsin legislature. The Socialists made prominent features of their campaign opposition to food adulteration, the contract system of public works and graft in the city garbage plant. They were also in favor of municipal ownership of model tenements. In his inaugural address Mayor Seidel named among the reforms for which his administration was pledged to work, improved sanitation of factories, the betterment of conditions under which labor on public works is performed and the establishment of a bureau of municipal research leading to the installation of a complete cost-keeping system for every municipal department. He also pledged his administration to prevent overcrowding of street cars, to compel the street railway companies to clean the cars regularly, to furnish enough cars, to sprinkle the streets between the tracks and to give the shortest routes for transfers. In December the City Council prepared a number of measures to be presented to the legislature providing power for the city administration to undertake many enterprises usually carried on by private interests. These measures included bills to empower the city to establish and maintain four municipal hospitals, to enable the city to take over and operate all public utilities now in private hands that the voters by a referendum vote may decide, and to raise the city bond limit to meet the purchase price; to secure permission to have the city acquire land for building model homes for workmen; empowering the city to build municipal slaughter houses and cold storage plants and empowering the city to have city plumbers do private plumbing and sewer work.

The State and congressional campaign in 1910 included many interesting features, but the most important from a national standpoint was the action of the voters in relation to the policies advocated by Senator La Follette, who was a candidate in the Senatorial primaries held in September for the renomination. Senator La Follette is one of the most prominent and perhaps the most aggressive leader among the insurgent Republican Senators, and strong efforts were made by the regular element of the party in the State and outside to defeat him for renomination. The campaign which preceded the primaries was a spirited one on both sides. Senator La Follette made speeches throughout the State setting forth his views and asking for the support of the voters on the strength of his work as a progressive Senator. The elections on September 6 resulted in his renomination by a plurality of 50,000. This is the most sweeping victory in his career. The progressive Republican candidate for governor, F. E. McGovern, also received a plurality of the votes in the primaries.

The Republican State Convention was held on September 28. It adopted a radical platform, endorsing the views and policies of Senator La Follette. This platform denounced the Payne-Aldrich tariff act as not being in accordance with the pledge of the Republican party. It endorsed and commended the services of progres-

sive Republicans from Wisconsin in the House of Representatives in their efforts to amend the rules in order that the House might again become a representative body. A plank was included calling for the conservation of national resources and for a comprehensive plan for the development and operation of water power plants. The immediate passage of a graduated income tax law was favored as was the election of United States Senators by direct vote of the people. The platform opposed the granting of shipping subsidies by the Federal government and called for the immediate enactment of an employers' liability law. It favored also the thorough investigation of the subject of occupational diseases with a view to the early enactment of suitable legislation.

The Democratic State Convention met on September 28, A. J. Schmitz being the candidate who had received the nomination for governor in the primaries. The platform adopted bitterly denounced the Payne-Aldrich tariff act, called for the conservation of national resources, favored the ratification of the proposed amendment to the United States Constitution and called for the immediate enactment of a dollar a day pension bill, favored the election of Senators by direct vote of the people, opposed the granting of subsidies by the government and especially condemned the ship subsidy bill pending before Congress. Amendments to the primary election law were favored.

The elections held on November 8 resulted in the election of Mr. McGovern, the Republican candidate for governor, and the entire Republican State ticket. William A. Jacobs, the Social Democratic nominee for governor, received 39,547 votes as against 28,583 cast in 1908. Twelve Social Democrats were elected to the Assembly and two to the Senate. Victor L. Berger, a Social Democrat, was elected to Congress from the 5th district. The State legislature is Republican by a joint ballot of 39, thus insuring the re-election of Senator La Follette.

**STATE OFFICERS.** Governor, F. C. McGovern; Lieutenant-Governor, Thomas Morris; Secretary of State, James A. Frear; Treasurer, Andrew H. Dahl; Attorney-General, L. H. Bancroft; Superintendent of Education, C. P. Cary; Commissioner of Insurance, H. L. E. Kern; Commissioners of Public Lands, Secretary of State, Attorney-General, and State Treasurer—all Republicans.

**SUPREME COURT.** Chief Justice, John B. Winslow, Dem.; Associate Justices, Wm. H. Tienlin, Dem.; R. G. Siebecker, Dem.; Andrew J. Vinje, Rep.; John D. Marshall, Rep.; J. C. Kerwin, Rep.; John Barnes, Dem.; Clerk, Clarence Kellogg, Rep.

**STATE LEGISLATURE, 1911.** Senate: Republicans, 27; Democrats, 4; Social Democrats, 2; Assembly, Republicans, 59; Democrats, 29; Social Democrats, 12. Joint Ballot, Republicans, 86; Democrats, 33; Social Democrats, 14. Republican majority—Senate, 21; Assembly, 18; Joint Ballot, 39.

**WISCONSIN, UNIVERSITY OF.** An institution of higher learning at Madison, Wis., founded in 1848. The total attendance in 1909-10 was 4947 divided among the several departments as follows: Letters and Science, 2241; Mechanics and Engineering, 781; Agriculture, 403; Short Course, 561; Law School, 159; Course in Pharmacy, 42; School of Music, 143; Summer Session, 1128; Library School, 30. The faculty

numbered 454. Among the appointments to the faculty during the fiscal year 1910 were the following: Edward Bennett, appointed Associate Professor of Electrical Engineering; Silas Evans, appointed Assistant Professor of Hebrew and Hellenistic Greek; Francis Thompson Havard, Assistant Professor of Mining and Metallurgy; Louis Ralph Jones, Professor of Plant Pathology; Charles Henry Huberich, Professor of Law. The most important gift received during the year was the bequest of Col. William Freeman Vilas, who made the University the residuary legatee of his estate, valued at nearly \$2,000,000. For other gifts to the University during the year see the article **GIFTS AND BEQUESTS**. The total receipts for the year 1909-10 amounted to \$1,740,243 and the total disbursements to \$1,669,920. Practically all the income of the University is received from the State and the United States government. The President is C. R. Van Hise.

**WITEK, ANTON.** See **MUSIC**.

**WILTSHIREITE.** See **MINERALOGY**.

**WOLFF, JULIUS.** A German poet and novelist, died June, 1910. He was born at Quedlinburg in 1834 and after studying philosophy and literature in Berlin he took charge of his father's manufactory at the former place. He was obliged to withdraw from business on account of unfavorable circumstances, and founded in 1869 the *Harzzeitung*. He took part in the Franco-German War and then settled in Berlin, devoting himself exclusively to literary labors. Beside the cycle of war lyrics, *Aus dem Felde* (1871, 3d ed. 1896), celebrating the events of 1870-71, he produced a number of lyric and humorous epics and novels, which became widely and favorably known. His epics and other poems include the following: *Till Eulenspiegel redivivus* (1874, 23d ed. 1896); *Der Rattenfänger von Hameln* (1876); *Der wilde Jäger* (1877); *Lurlei*, a romance, (1886); *Renata* (1892); and *Der fahrende Schüler* (1900); while his novels include: *Der Sulfmeister* (1883); *Der Raubgraf* (1884); and *Die Hohenkönigsburg* (1902).

**WOLFRAMITE.** See **CHEMISTRY**.

**WOLVERTON, SIMON P.** An American lawyer and public official, former Representative in Congress from Pennsylvania, died October 25, 1910. He was born in 1837 and graduated from Lewisburg University in 1860. He was admitted to the bar in 1862. He practiced law in Sunbury, Conn., until 1878 when he was elected to the State Senate, remaining a member of that body until 1888, when he refused a re-nomination. In 1890 he was elected to Congress from the 17th Pennsylvania District and two years later was re-elected. He retired at the end of his second term and devoted his time to the practice of law. For over forty years he was superintendent for the Philadelphia and Reading Railroad and the Philadelphia and Reading Coal and Iron Company. He was one of the most prominent lawyers of Pennsylvania.

**WOMAN SUFFRAGE.** The movement for woman suffrage showed continued progress in 1910. Vigorous educational campaigns were carried on in several countries and there were signs of increasing popular support. Many new associations of suffragists were formed and the membership of the older bodies showed a great increase.

**THE UNITED STATES.** The most notable gain during the year was the adoption by a large

majority in the State of Washington of the constitutional amendment granting the suffrage to women. Such an amendment had been lost in 1889 by a majority of about 19,000 and in 1898 by a majority of about 9000. The legislatures of Oregon, South Dakota, and Oklahoma also submitted woman suffrage amendments to the voters but without success. The constitutional convention of New Mexico rejected complete woman suffrage but gave women the school suffrage and the right to hold local and county school offices. Woman suffrage was also rejected by the constitutional convention of Arizona. Thus at the close of 1910, women had the complete suffrage in Colorado, Idaho, Utah, Wyoming, and Washington. In New York the legislature passed the bill giving women the right to vote on bonding proposals in every town, village and third-class city. The organized bodies of suffragists carried on an active campaign. The Federation of Women's Clubs at its biennial meeting at Cincinnati in May admitted the subject of woman suffrage among their agenda. On May 21 a woman's parade was held in New York City, and much enthusiasm was shown. It was taken as a sign that the movement had entered upon its "militant" stage, as in England. On January 1, 1910, the suffrage clubs of Greater New York united in an organization known as the Woman Suffrage Party, which after the first nine months of its existence reported an enrollment of 20,000 members. The National Association held its annual meeting at Washington in April and was addressed by President Taft who said he feared that if the franchise were granted the intelligent classes of women would not avail themselves of it. This was the first time the body was addressed by a President of the United States. A monster petition with 500,000 signatures was at this time presented to Congress for the reference of the suffrage question to popular vote. The judiciary committee to which it was submitted voted against submitting a suffrage bill.

**GREAT BRITAIN.** On June 14, a bill supported by the Conciliation Committee was introduced in Parliament by Mr. Shackleton. It was designed "to extend the parliamentary suffrage to women occupiers," including "every woman possessed of a household qualification or of a £10 occupation within the meaning of the Representatives of the Peoples act (1884)" and including married women provided "the husband and wife shall not both be qualified in respect of the same property." It was supported by Mr. Balfour and opposed by Mr. Austin Chamberlain of the Opposition. On the government side Mr. Lloyd-George opposed it. It was shelved for the session by commitment to a committee of the whole. On November 22, however, Mr. Asquith promised that in the next parliament his party, if in power, would give facilities for a woman suffrage measure, if it were so framed as to admit of amendment.

**OTHER FOREIGN COUNTRIES.** In Norway the bill for universal municipal suffrage (see *NORWAY, History*) passed the Parliament and on June 27 received the Royal assent. In Canada, the city of Vancouver extended the municipal suffrage to married women. It had already been possessed by spinsters and widows. The Wurtemberg Diet gave women the right to vote for members of the Chamber of Agriculture and made them eligible to membership. Bosnia bestowed the suffrage on women owning a certain

amount of land or personal property. In Hungary a Hungarian Men's League was formed to promote the cause of woman suffrage. In Australia the Senate of the Commonwealth adopted a resolution declaring that the extension of suffrage to women for States and Commonwealth Parliaments on the same terms as to men "has had the most beneficial results." Among these it mentions "more orderly conduct of elections," and "greater prominence given to legislation affecting women and children." It pronounces the woman voters as "far seeing and discriminating as men" and it concludes with the following recommendations: "Because the reform has brought nothing but good, though disaster was freely prophesied, we respectfully urge that all nations enjoying representative government would be well advised in granting votes to women."

**WOMEN IN INDUSTRY. ILLINOIS TEN-HOUR LAW.** The most notable event of the year in the United States bearing upon the status of women in industry was the decision of the Supreme Court of Illinois on April 21, upholding the law of 1909 limiting the employment of women and girls in mechanical establishments, factories and laundries to ten hours in any one day. This decision grew out of an appeal on an injunction which had been granted to W. C. Richie and Company, a firm of paper-box manufacturers, restraining the State factory inspector from enforcing the law. On February 10, the court heard arguments. The State had secured as special counsellor Mr. Louis R. Brandeis of Boston, who, with the assistance of Miss Josephine Goldmark of the National Consumers' League, prepared a notable brief of more than six hundred pages. The argument against the constitutionality was based primarily on the ground that the law violated the provision that "no person shall be deprived of life, liberty or property without due process of law." On this point the court held that the property rights of the citizen are enjoyed subject to the reasonable exercise of the police power of the State. The express purpose of this law "to safeguard the health of such employes" was declared by the court a proper exercise of the police power. To the argument that the law was class legislation the court held that, since the pace in mechanical establishments, factories and laundries is set by machinery, the legislature had not created a special class, but had merely defined the limits of an already existing class clearly different from mercantile establishments, hotels, and restaurants.

The brief for the State laid great stress on the physical differences between women and men and the human values at stake. The importance of family responsibilities, of household cares and of future motherhood was clearly developed. Emphasis was laid on the toxin of fatigue as worked out by recent scientific investigators. The recent development of protective legislation for women was traced; the opinions of the Supreme Court of the United States in the Oregon ten-hour case were cited; and the reasonableness of the Illinois statute as essential to the preservation of liberty rather than an interference with the right of contract was pointed out. The opinion which was written by Justice Hand, after declaring that the limitations of the strength of women and their capacity to endure trying conditions of labor are well known, declared that "What is known to all men and

what we know as men we can not profess to be ignorant of as judges." The opinion, therefore, concluded that "it would seem obvious that legislation which limits the number of hours which women shall be permitted to work to ten hours in a single day in such employments as are carried on in mechanical establishments, factories and laundries, would tend to preserve the health of women and insure the production of vigorous offspring by them and would directly conduce to the health, morals and general welfare of the public, and that such legislation would fall clearly within the police power of the State." This decision, in connection with that of the Supreme Court of the United States upholding the Oregon ten-hour law, clearly establishes the right of a State to use its police power in restricting the freedom of contract of adult women. It was estimated that 30,000 women and girls would secure a reduction in hours, and that many others would be relieved of overtime in rush periods as a result of this decision.

**NEW YORK LAW AND REPORT ON TEXTILE INDUSTRY.** Vigorous efforts were made for a time to amend the New York law so as to permit the employment of women and girls over sixteen in canneries and fruit preserving establishments, between June 15 and October 15, without other restrictions as to hours than that they should not average more than ten hours per day for the season. The bill was withdrawn because of the public opposition aroused by it. In the summer a report authorized by Congress in 1907 was published by the Department of Commerce and Labor dealing with the cotton textile industry. It covered 198 mills employing 81,355 persons, located in four northern States, Maine, New Hampshire, Rhode Island, and Massachusetts; and six Southern States, Alabama, Mississippi, Georgia, Virginia, North and South Carolina. It covered about one-fifth of the industry, giving detailed statistics of men, women and children employed. Its interest is mainly historical because the data were gathered in 1907-8 before much of the advanced legislation dealing with the employment of women and children.

**TELEPHONE EMPLOYEES.** The employment of girls in telephone exchanges was the subject of investigation by a Canadian Commission, by the Wisconsin Railroad Commission, and by the United States Bureau of Labor. The latter included twenty-seven telephone companies in twenty-six States, detailed data being obtained for about forty thousand employes. Of these, 17,210 were female operators working at switchboards. While exchanges were found to be well-housed as a rule, the most frequent complaint of the operators was the lack of elevator service. The report showed that the companies imposed fairly high educational and physical requirements on applicants. Thus, out of 6152 girls applying, 544 were rejected as too small, 436 as too young, 519 as not well enough educated. Girls under five feet are not able to reach to the top of the switchboard or at a sufficient distance sideways. Some city exchanges endeavor to secure high school girls only. The report gives a minute study of the character and the severity of the work. As to salaries, 16,258 women operators of the Bell Companies received an average monthly pay of \$30.91. The salaries in small towns, however, averaged only \$18.21, while in New York City the average was

\$36.96. The average length of service was shown to be about three years.

**BIBLIOGRAPHY.** A number of notable publications dealing with wage-earning women were published during the year. *Women and the Trades*, by Elizabeth B. Butler, is one of the Russell Sage Foundation Publications dealing with the *Pittsburg Survey*. It gives an account of an intensive study into the work of wage-earning women in Pittsburg. *Women in Industry*, by Edith Abbot, Ph. D., Associate Director of the Chicago School of Civics and Philanthropy, is perhaps the most exhaustive study yet made of the scope of industrial employment of women in the United States. Tracing the history of such from colonial times the author shows that the self-supporting woman antedates the factory era. The women workers in the cotton, boot and shoe, cigar, printing and other industries are treated historically and statistically. The efficiency and wages of women are studied; and emphasis is laid upon laws protecting them from exploitation and on the value of an informed public opinion in preserving the social value of women. *Wage-Earning Women*, by Annie M. MacLean, Ph. D., is one of the *Citizens' Library Series*. It is the result of a group of investigations made in various parts of the country by a staff of twenty-nine college and university women. About four hundred establishments employing 135,000 women in more than a score of cities were investigated.

**FRANCE.** The question of dress-making and home employment of women was given considerable attention during the year. By a decree of the Minister of Labor, in effect June 30, night work by seamstresses, as well as other women workers, was prohibited. This was made necessary by the extraordinary rush due to the American season. In many dress-making establishments women were compelled to work all night during the height of the season, and at other times frequently until ten or eleven o'clock at night. The problem of protecting women working at home on sewing, dress-making, millinery, artificial flowers and kindred employments was receiving the attention of legislators at the close of the year. Among the suggestions that had been made for the solution of this difficult problem was the establishment of a minimum wage.

**WOMEN'S CLUBS, GENERAL FEDERATION OF.** An organization founded in 1892. It is composed of individual clubs under State or Territorial federation and there are affiliated organizations with large membership lists. The number of women's clubs in the United States affiliated with the General Federation is about 4500 and the membership is about 500,000. The Tenth Biennial Convention of the Federation met in Cincinnati, May 11-18, 1910. Among the special subjects considered were "Conservation and Public Health," "Education for Girls," "Equal Suffrage," "Civic Betterment," "The Theatre and the People" and others. The President of the Federation in 1910-12 is Mrs. Philip N. Moore; First Vice-President, Mrs. Josiah E. Cole; Second Vice-President, Mrs. John Dickinson Sherman; Recording Secretaries, Mrs. Henry H. Dawson and Mrs. George O. Welch; Corresponding Secretary, Mrs. Frank M. Shiek; Treasurer, Mrs. John Threadgill, and Auditor, Mrs. L. L. Blankenburg.

**WOMEN'S COLLEGES.** See UNIVERSITIES AND COLLEGES.

**WOOD, PRESERVING.** See CHEMISTRY.

**WOOD, WALTER.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**WOOD, W. C. H.** See LITERATURE, ENGLISH AND AMERICAN, *History*.

**WOODBERRY, G. E.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**WOOD-JONES, F.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**WORKMAN, Mrs. F. B.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**WORKMAN, W. H.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**WORKMENS' COMPENSATION.** Throughout western nations compensation for industrial accidents according to some legally established schedules without resort to litigation has tended to displace the traditional form of employers' liability. The laws of the United States have yielded more slowly to this movement than those of England or Germany; consequently, although emphasis is clearly shifting, this subject is treated under EMPLOYERS' LIABILITY.

**WORKMENS' COMPENSATION ACT.** See GREAT BRITAIN, *History*.

**WRESTLING.** The principal wrestling event of 1910 in professional circles was the match between Zbyszko and Gotch, the heavyweight champion of the world. Gotch was the winner in two straight falls, the first taking 6½ seconds and the second 27 minutes, 36 seconds. Previous to this contest Zbyszko had defeated several of the most prominent wrestlers on both sides of the Atlantic. The national championships of the Amateur Athletic Union resulted as follows: 105 pound, George Taylor of the National Turn Verein, Newark; 115-pound, John Hein of the Boys' Club, New York; 125-pound, Max Himmelboch, of the Young Men's Hebrew Association, Detroit; 135-pound, G. S. Kennedy of the Lincoln Turn Verein, Chicago; 135-pound, Carl Johnson of the Swedish American A. C., Brooklyn; 158-pound, Frederick Narganes of the New York A. C.; heavyweight, Frank Motis of Chicago.

In the intercollegiate bouts, the Cornell team won with a total of 11 points. Princeton scored 7 points and Pennsylvania and Columbia each scored 5. The individual winners were: 115-pound, Johnson of Cornell; 125-pound, Ward of Princeton; 135-pound, Stewart of Pennsylvania; 145-pound, Peake of Cornell; 158-pound, Nicholls of Cornell; 175-pound, Ganett of Princeton; heavyweight, Saunders of Cornell.

**WRIGHT, EDMUND.** An English mathematician, died February 21, 1910. He was born in England and graduated from Cambridge University, being senior wrangler in 1900, and Smith's prizeman in 1902. He was for seven years a fellow of Trinity College, Cambridge. In 1903 he was called to Bryn Mawr College as associate professor of mathematics. He retained this position until the time of his death. He was the author of numerous papers in the field of higher mathematics. In 1908 his treatise on *Invariants of Quadratic Differential Forms* was published by the Cambridge University Press.

**WRIGHT, E. H.** See LITERATURE, ENGLISH AND AMERICAN, *Essays and Literary Criticism*.

**WRIGHT, HAROLD BELL.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*.

**WRIGHT, I. A.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**WRIGHT AEROPLANE.** See AERO-NAUTICS.

**WÜLKER, RICHARD PAUL.** A German philologist, died February, 1910. He was born at Frankfort-on-the-Main, 1845, and was educated at the universities of Berlin, Leipzig, and Marburg. In 1875 he was appointed professor of English language and literature at the University of Leipzig. His published writings include the following: *Das Evangelium Nikodemus* (1872); *Altenglisches Lesebuch* (1874-80); *Kleinere angelsächsische Poesie*, re-edited (1881-99); *Grundriss zur Geschichte der angelsächsischen Literatur* (1885); *Codex Vercellensis* (1894); *Geschichte der englischen Literatur* (1896); and *Bibliothek der angelsächsischen Prosa* (1899).

**WURTZ, HENRY.** An American chemist, died November 10, 1910. He was born in 1827 and graduated from Princeton University and the Massachusetts Institute of Technology. At the outbreak of the Civil War he was chemical examiner in the United States Patent Office and professor of chemistry in the National Medical College. He was the author of numerous scientific treatises and was the first scientist to prove the existence of gold in sea water. He discovered several minerals, one of which was named for him. For many years he was editor of the *New York Gaslight Journal*.

**WYMAN, ISAAC O.** An American philanthropist, died May 16, 1910. He was born in 1827 in Salem, Mass. He made a large fortune in real estate and at the time of his death was said to have owned real estate in every State and Territory in the country. He was the owner of nearly two-thirds of the land in Marblehead Neck. One of his early investments was in the Suez Canal. He graduated from Princeton University and to this institution he left his entire estate, amounting to about \$3,000,000.

**WYOMING.** One of the Mountain Division of the United States. Its area is 97,714 square miles. Its capital is Cheyenne.

**POPULATION.** The population of the State in 1910, according to the Thirteenth Census, was 145,965 as compared with 92,531 in 1900 and 62,555 in 1890. The increase in the decade 1900 to 1910 was 57.7 per cent. The State ranks forty-ninth in point of population, the same relative rank which it held in 1900. The population of the larger cities and towns will be found in the tables in the articles UNITED STATES CENSUS.

**MINERAL PRODUCTION.** The State is important as a producer of coal. This amounted in 1909 to 6,376,909 short tons as compared with 5,489,902 short tons in 1908. The increase in production in 1909 was general throughout the State. The United States Geological Survey estimates an increased production in 1910. There was produced in 1909 gold to the value of \$3990 and 1363 fine ounces of silver. The State produces copper, but the production of 1909 showed a decrease from that of 1908 which in the former year was 433,672 pounds, as compared with 2,416,197 pounds in 1908. Among other mineral products, although in relatively unimportant quantities, are clay products, gypsum, lime, sand and precious stones.

**AGRICULTURE.** The acreage, production and value of leading crops for 1909 and 1910 are given in the following table:

	Acreage	Prod. bu.	Value
Corn, 1910.....	6,000	60,000	\$ 40,000
1909.....	5,000	140,000	109,000
Winter wheat, 1910...	42,000	1,050,000	998,000
1909...	25,000	812,000	804,000
Spring wheat, 1910...	65,000	1,625,000	1,544,000
1909...	55,000	1,485,000	1,470,000
Oats, 1910.....	130,000	4,160,000	2,080,000
1909.....	100,000	3,500,000	1,750,000
Barley, 1910.....	4,000	120,000	80,000
1909.....	4,000	124,000	92,000
Rye, 1910.....	1,000	18,000	15,000
1909.....	1,000	26,000	23,000
Potatoes, 1910.....	11,000	1,100,000	902,000
1909.....	10,000	1,600,000	1,008,000
Hay, 1910.....	300,000	720,000	9,000,000
1909.....	277,000	665,000	5,918,000

**EDUCATION.** The number of children of school age in the State on April 30, 1910, was 32,334. The enrollment in the schools was 24,584. In the past two years there has been a great increase in the attendance at the schools, in large measure due to an excellent truancy law passed by the legislature. The compulsory education law was amended by the legislature of 1909 and the results of its operation have been excellent. The average monthly compensation of male teachers in the State was \$75.57 and of female teachers, \$56.84.

**FINANCE.** The report of the State treasurer for the biennial period 1909-10 showed a cash balance in the treasury on October 1, 1908, of \$353,419. The total receipts during the period were \$1,947,089 and the disbursements were \$1,800,825, leaving cash on hand September 30, 1910, of \$327,228. The bonded debt of the State on September 30, 1910 amounted to \$180,000.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions under the care of the State, with the disbursements for their support during the biennial period 1909-10, were as follows: Hospital for the Female Insane, \$48,997; Hospital for the Insane, \$1200; Penitentiary at Rawlins, \$919; State Hospital, \$58,551; Rock Springs Hospital, \$378; Home for Feeble-minded and Epileptics, \$16,111; Sheridan Hospital, \$38,120; Miners' Hospital, \$1207; Penitentiary in Albany county, \$2400; Wyoming Soldiers and Sailors' Home, \$17,804.

#### POLITICS AND GOVERNMENT

There was no session of the State legislature in 1910 as the sessions are biennial and the last was held in 1909.

**CONVENTIONS AND ELECTIONS.** The feature of the election of 1910 in Wyoming was the attempt made to wrest the control of the State from the regular Republicans. In this attempt the Democrats combined with the insurgent Republican wing and united on a candidate for governor, nominating on September 21 Judge Joseph M. Carey the leading insurgent Republican in the State. The platform which was adopted was constructed to meet the approval of Judge Carey and contained nothing in condemnation of the national administration, except some criticism of the Payne-Aldrich tariff law. The Republicans had previously held their convention on September 15 and had defeated the insurgents by nominating for governor W. E. Mullin, a regular. The platform

endorsed President Taft's administration, with special commendation for the attitude of the President on the question of conservation. The insurgents did not hold a convention but supported the ticket nominated by the Democrats. The platform adopted by the Democratic insurgent combination favored the initiative and referendum, the Oregon primary laws, publicity of corporation affairs, a commission form of government for municipalities, eight hour labor laws, State conservation as against national conservation, and other laws for State government.

In the election held on November 8, the Democratic insurgent combination succeeded in electing its candidate for governor, Judge Carey, by a plurality of 5851. The total vote was, Carey, 21,086, Mullin, 15,235, and the Socialist candidate received 1605 votes. The Republican candidate for Representative to Congress, Frank W. Mondell, was re-elected. The State legislature remains Republican by 13 on joint ballot, thus insuring the re-election of Senator Clarke, whose term expires in 1911.

The disastrous winter of 1909, followed by a dry season, caused considerable retrenchment in the livestock industry, herds and flocks being marketed early, thus reducing the demands upon the range.

The Chicago, Burlington and Quincy Railway which is building a Seattle-Galveston line through Wyoming, made rapid progress and will have its road in operation by January 1, 1912. An important link is between Cheyenne and Wellington, Colorado, thirty-five miles long, which is being rapidly rushed to completion.

The influx of farmers, both in irrigated and unirrigated sections, continued throughout the year. Congressman Mondell's surface rights law applying to classified coal lands, opened up a large acreage to settlement.

The Pathfinder and Shoshone national irrigation projects made marked progress (see RECLAMATION) and Asmus Boysen completed a great dam for power purposes near Shoshone, which will be one of the largest private power enterprises in the country.

**STATE OFFICERS.** Governor, J. M. Carey; Secretary of State, F. L. Houx, Treasurer, J. L. Baird; Auditor, R. B. Forsythe; Adjutant-General, \_\_\_\_\_; Attorney-General, \_\_\_\_\_; Supt of Education, Rose Bird—all Democrats except Baird and Forsythe.

**SUPREME COURT.** Chief Justice, Chas. M. Potter; Associate Justices, Cyrus Beard, Richard H. Scott; Clerk, W. H. Kelly—all Republicans.

**STATE LEGISLATURE, 1911.** Senate: Republicans, 19; Democrats, 8; Republican majority, 11. House: Republicans, 29; Democrats, 27; Republican majority, 2, joint ballot: Republicans, 48; Democrats, 35; Republican majority, 13.

**XENON.** See ATOMIC WEIGHTS.

#### YACHTING AND MOTOR-BOATING.

The yachting season of 1910 was the most notable in the history of the sport, a larger number of boats being built and more races contested than ever before. Seven ocean races were held, four for power boats and three for sailing craft. The longest was the Philadelphia-Havana event of 1200 miles in which

four boats were entered. The *Bernego*, a 50-foot power boat owned by S. W. Granbery, was the winner, covering the distance in 150 hours 19 minutes. An average speed of 7.97 nautical miles per hour was maintained. The Bermuda power boat race was won by the *Eronel II*, belonging to F. D. Giles, Jr. The sailing race to Bermuda was won by Harold Vanderbilt's schooner *Vagrant*.

American boats were the victors in both international races held during the year. The first was the sonder-klasse event between Spanish and American boats held off Marblehead for the cup presented by President Taft. The *Harpoon*, owned by Charles Francis Adams, 2d, was the winner. The second international race was between American and English boats for the British International Trophy. The event was won by F. K. Burnham's *Dixie II*.

The Astor Cup for schooners was captured by F. F. Brewster's *Elmina*. The same boat while on the cruise of the New York Yacht Club was the winner of the commodore's, vice-commodore's and rear commodore's cups during the runs from port to port. Cornelius Vanderbilt's *Aurora* of the 65-foot class won the Astor Cup for sloops and the King's Cup. The *Aurora* also captured the Bennett Cup and during the racing season finished first in thirteen races, second in thirteen and third in eight.

**YALE UNIVERSITY.** An institution of higher learning at New Haven, Conn., founded in 1701. The total attendance of the university in the year 1910-11 was 3287. The instructors numbered 406. Among the important acquisitions to the faculty during the collegiate year were the following: Ernest Carroll Moore, for many years Superintendent of Schools in Los Angeles, Cal., and previously Assistant Professor of Pedagogy at the University of California became Professor of Education; Albert Tobias Clay, Ph. D., took up his work as Professor of Assyrian and Babylonian Literature on the Laffan Foundation, established by J. Pierpont Morgan. Dr. Clay was previously at the University of Pennsylvania. Charles McLean Andrews, formerly of Johns Hopkins University, assumed the duties of Professor of American History on the recently established Farnam Foundation; Professor Allan Johnson, formerly of Bowdoin College, became Larned Professor of American History to succeed Professor Charles S. Smith, resigned; Professor Bertram Boltwood became Professor of Radioactivity. The total gifts and bequests to the university during the year amounted to \$2,398,291. For mention of the most notable gifts see the article GIFTS AND BEQUESTS. The investments of the university amounted to \$12,101,993 and the annual income to nearly \$2,000,000. The president is Arthur T. Hadley.

**YELLOW FEVER.** Professor Boyce, concluding an investigation of yellow fever in Jamaica, reported that the old-time scourge of the West Indies has practically disappeared. Since 1850, when water pipes were introduced in nearly all the principal towns, thus doing away with the necessity for wells, vats and barrels, the breeding places of the *stegomyia* were greatly reduced in numbers and with them the number of cases of yellow fever. Boyce states that wherever a considerable reduction in the number of the *stegomyia* mosquito is brought about, yellow fever ceases to be endemic in that place; in short, a certain

excess of this mosquito appears to be necessary for the maintenance of continuous infection or endemicity. Short of that number, the endemic character disappears, but if a case of yellow fever should be imported from some distant focal centre, as for example Central America, then a smaller or larger outbreak will occur, limited in extent by the number of *stegomyia* existing in that particular district. These outbreaks, however, are becoming less frequent and smaller. There were no cases of yellow fever in the United States, the Isthmus of Panama (except 2 imported cases) or the Philippines, during 1910. See VITAL STATISTICS.

**YOUNG, G. F.** See LITERATURE, ENGLISH AND AMERICAN, *Biography*.

**YOUNGHUSBAND, E.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**YOUNGHUSBAND, Sir FRANCIS.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**YOUNGMAN, A.** See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

**YOUNG MEN'S CHRISTIAN ASSOCIATION.** An interdenominational association for carrying on an all-round welfare work for young men on a Christian basis. The association originated in London in 1844. It now exists in every continent and in nearly every country of the world. In America it is found in 10 countries; in Europe in 22; in Asia 11; in Africa 4; in Australasia 3. The total membership of the association in 1910 was 889,850. The associations occupied 1264 buildings valued at \$64,202,975, and there were 1521 paid general secretaries. In North America there were 2017 associations with 496,591 members and 696 buildings, valued at \$50,919,915. There were 2927 employed officials. In the association educational classes there were 52,277 students; in physical work, 271,506; in Bible classes 94,789. By departments the classifications were as follows: Members in the railroad associations 83,881; in student associations 58,923; in boys' departments 91,756. In city associations there were 68,666 men in industrial occupations. For current expenses there were expended in 1910 for local work, \$7,081,043; State and provincial work, \$463,504; international committee—home work, \$279,630; foreign missionary work, \$193,082. There were 76 international employed secretaries in the home field, and 86 in the foreign field. The North American International Committee is composed of 63 members: Lucien C. Warner, chairman; F. B. Schenck, treasurer; and R. C. Morse, general secretary.

**YOUNG WOMEN'S CHRISTIAN ASSOCIATIONS OF THE UNITED STATES OF AMERICA,** NATIONAL BOARD OF. Object: "To unite in one body the Young Women's Christian Associations of the United States; to establish, develop and unify such associations; to advance the physical, social, intellectual, moral and spiritual interests of young women; to participate in the work of the World's Young Women's Christian Association." One hundred eighty-nine City Associations, 639 Student and nine Industrial and Rural Associations are members of the national organization with a total membership of 216,556 young women. There are 15 Territorial and State organizations. Each year 10 summer conferences are held

to train volunteer workers in Bible study and Association work. Work has recently been instituted among the Indians, immigrants, colored students and in professional and private schools. The National Training School to prepare young women for executive positions is located at 3 Grammercy Park, New York. The official organ is *The Association Monthly*. Miss Grace H. Dodge, President; Mrs. Samuel J. Broadwell, Treasurer; Mrs. W. Rossiter, Secretary; Miss Mabel Cratty, General Secretary.

**YTTERBIUM (NEOYTTERBIUM).** See ATOMIC WEIGHTS.

**YTTRIUM.** See ATOMIC WEIGHTS.

**YU-LANG.** See CHINA.

**ZAMACOIS, M.** See FRENCH LITERATURE.

**ZANGWILL, I.** See LITERATURE, ENGLISH AND AMERICAN, *Travel and Description*.

**ZANZIBAR.** A British protectorate on the eastern coast of Africa, embracing the islands of Zanzibar (640 square miles), Pemba (340), Lamu (56), Manda, Patta, and Siwa; a ten-mile coast-line from Wanza to Kipini; and the port of Kismayu, with a ten-mile radius. A recent estimate by British officials gives the population as follows: Zanzibar (island), 195,000 (Zanzibar, the capital city, 70,000); Pemba, 60,000 (about); total, about 255,000, of which about 10,000 are Arabs and 20,000 East Indians. Whites, about 250. Chake-Chake is the chief city of Pemba. There are government and mission schools. There are no mines. Cloves, cocoanuts, chillies, and betel nuts are grown; the export of cloves constitutes about 85 per cent. of the world's supply. Imports (1909), £994,368 (1908, £969,841); exports, £1,001,364 (£977,628). In 1908 the export of cloves and clove stems amounted to £264,960; copra, £119,940; ivory, £54,469. Trade by countries (1909): British India, £389,492 imports and £198,006 exports; Great Britain, £144,521 and £89,900; German East Africa, £128,819 and £106,673; United States, £45,778 imports; Germany, £40,984 imports; France, £128,267 exports (returns incomplete). Total tonnage entered (1908), 445,350, exclusive of coasting and dhow traffic which is very large, extending to Bombay, Arabia, the Comoro Islands and Madagascar. A light railway (American) extends from Zanzibar to Bububu (about six miles). Actual revenue and expenditure for 1909, £204,000 and £189,000 respectively; 1910 estimates, £185,000 and £197,000. The sultanate has an invested fund of £500,000, and a public funded debt of £78,687. Reigning sultan, Seyid Ali bin Hamoud bin Mahomed bin Said (born June 7, 1884; succeeded, July 20, 1902). British agent and consul-general, E. A. W. Clarke. The Zanzibar domains on the mainland are administered through the governor of the East African Protectorate.

**ZEPPELIN AIR SHIPS.** See AERONAUTICS.

**ZIEGLER, CLARA.** A German actress, died in January, 1910. She was born in Munich in 1844. After making her debut at Bamberg in 1862, she was seen successively at Ulm, Munich and Leipzig. She scored great triumphs, especially as Brunhild, Isabella, Maid of Orleans and Elisabeth. From 1868 to 1874 she was a member of the royal theatre in Munich and in 1886 married her former instructor, Adolf Christen. She appeared in engagements on nearly all the principal stages of Germany,

Holland and Russia. Her chief rôles were in tragedy, but she also impersonated successfully characters in high class comedy. She was the author of several comedies, which were produced with considerable success.

**ZINC.** The production of zinc in the United States in 1910, according to the *Engineering and Mining Journal*, was the largest on record. The total production of spelter or crude zinc was estimated at 278,380 tons as compared with an output of 266,462 tons in 1909. Of the production in 1910 112,533 tons came from the Kansas-Missouri mines and 80,834 tons from the Illinois mines.

The imports of zinc ore in 1910 were about 85,000 tons compared with 118,269 tons in 1909. The exports were about 19,000 tons as compared with 12,456 in 1909. There were about 30 zinc smelters in the United States actively producing in 1910, with 224 furnaces and 95,211 retorts.

The prices of zinc and zinc ore remained about the same in 1910 as in the year previous in spite of the higher tariff on zinc ore.

The failure of natural gas in Kansas is likely to result in a shortage of smelting capacity in that State. Four works at Iola were abandoned during the year. See **ATOMIC WEIGHTS** and **MINERAL PRODUCTION**.

**ZIRCONIUM.** See **ATOMIC WEIGHTS**.

**ZOOLOGICAL SOCIETIES.** The 8th International Zoological Congress met at Gratz, Austria, in August, under the presidency of Professor Dr. L. V. Graff. It was announced that the 9th meeting will be held in 1913 at Monaco, with the Prince of Monaco as President. The British Association for the Advancement of Science met in September at Sheffield. The Zoological section was under the presidency of G. C. Bourne, whose address was a plea for the study of morphology now somewhat in disrepute. The American Association met at Minneapolis during the last week in December, with J. Reighard as Vice-President of the Zoological section. The address was by the retiring Vice-President, W. E. Ritter. The Central Branch of the American Society of Zoologists met at the same time and place, with C. E. McClung as President. The Eastern Branch of the Zoological Society met at Ithaca with the American Society of Naturalists, T. H. Montgomery and D. T. MacDougall being the respective presidents. The latter society has for several years limited its discussions to some phase of the evolution problem, the subject for 1910 being the "Pure Line" theory of Johannsen.

**ZOOLOGY.** As was stated in the **YEAR BOOK** for 1908, the latest addition to the apparatus of the zoological laboratory is the centrifuge. Unsegmented eggs, centrifuged for a time, show a stratification into visibly different layers, there being a surprising amount of uniformity in the number of these layers among eggs belonging to very different groups of animals, three being the number which usually appeared. Since other experiments had shown that in many cases visibly distinct substances had entirely different fates in the developing embryo, the removal of one of them from the egg resulting in a loss of some one organ from the body of the larva, it was thought that when these substances, separated by the centrifuge, were displaced in this way, definite abnormalities would follow. Morgan showed, however, in 1910, that although these

three layers separated when the eggs of a mollusk, a nemertean, a rotifer and a fish were centrifuged, perfectly normal embryos nevertheless made their appearance, in all three groups, though the distribution of the material must have been quite different from the untreated egg. Abnormal embryos may appear, but this, according to Morgan, is due rather to the effects of handling the eggs in removing them from the parent, etc. than to the centrifuge, the results of various experiments tending to this conclusion. Morgan's observations on the behavior of the karyokinetic spindle in these experiments indicated that the spindle fibres are more or less permanent organs, and the centrosome is not to be regarded as a "centre of force." While he does not attempt an explanation of the function of the centrosome, he thinks that it is possible to form the clearest conception of the process by regarding the spindle formation as analogous to a crystallization process, the centrosome acting as a crystallization centre.

Conklin, working on the eggs of pond snails, reached conclusions essentially in agreement with those of Morgan. Although there are visibly distinct substances in the eggs of these animals, and although these substances have definite fates in the normal development, their position may be changed by the centrifuge without in any way affecting the character of the resulting embryo. The chief axis of the egg is apparently fixed in all stages, and is not altered by the shifting of egg substances. There is evidence also that the bilaterality of the egg is early marked off, but Conklin decides that neither polarity nor bilaterality is unalterably associated with any of the three visible substances of the egg. His final conclusion is that there must be some sort of a framework which is not affected by the experiment, and which by a sort of regulation restores the original organization as the development progresses. Morgan stated that pressure on an egg having determine type of cleavage, as in *Ciona* and *Nereis*, produces an abnormal embryo much more readily than in the case of the frog or sea urchin, where the cleavage is indeterminate. He concluded that in the former eggs specification appears early, and cleavage planes coincide with areas of specification, thus separating different areas. Pressure, by forcing cleavage planes into new localities, may crowd into one cell, material having different dynamic qualities and therefore abnormalities may result.

That in *Paramœcium* a process of conjugation occurs after a longer or shorter period of reproduction by fission is apparently a well established fact, attested by numerous observations. The usual explanation is that in conjugation the individuals are mutually supplied with some protoplasmic ingredient which has been exhausted from their bodies, and that they will die if this be not supplied. Jennings, in 1910, decided that the conditions which govern conjugation are different in different races of the same species. Some conjugate frequently, while others under the same conditions do so very rarely or not at all. Since in some races, then, conjugation may be repeated at intervals of from five days to a month, while in others it may be deferred for at least three years, Jennings concludes that when it occurs it must have some other explanation

than that it is the result of senile degeneration at the end of a life cycle. Jennings also showed in another paper that some individuals separated when beginning the conjugation process would live and continue the normal divisions, while others after conjugation divided more slowly and showed more abnormalities. This gave further evidence that conjugation is not essentially a rejuvenation process.

Parker working on the reactions to stimulus shown by *Stylatella*, a sponge, showed that while its oscula will close in response to stimulation of various sorts, this movement seems to be merely that of a muscle, and there appears to be nothing that could properly be called a nerve reaction. Phylogenetically, he thinks, muscles developed first, and are the only portion of the neuro-muscular apparatus present in sponges. Later, the development of sense cells gave rise to a condition like that in cœlenterates, while the processes in the higher metazoans are due to the development of an adjuster or central nerve organ.

Hertwig returned during the year to the defense of his old theory that the germ plasma is located in the nucleus of the cell, reaching this conclusion from the equivalence of ovum and sperm nuclei, the precise division of nuclear substance in karyokinesis, and in the reduction processes by which accumulation of nuclear matter is obviated. Newman in *Fundulus* hybrids showed also that the influence of the sperm appears as early and is as important as the ovum in fixing the characters of the embryo.

Kershaw stated that the candle fly, *Pyrops candelaria*, is not as is commonly supposed phosphorescent, but that the snout is rather a food reservoir. The pairing apparently always takes place at night, after a preliminary courtship which is usually somewhat prolonged.

Dendy has reinvestigated the anatomy and development of the pineal eye of *Sphenodon*, and finds that its nerve is not a median structure, but comes from the left side of the brain, indicating that the pineal organs are paired structures. The chief structural sign of degeneration shown by the eye is the great amount of pigment found in it when adult. Owing to the general sluggish habit of the animal, it was difficult to get positive results in experiments on the light perceiving power of this eye, for though it did not respond when a bright light was flashed into the organ, that may not have meant more than that the animal responds very slightly

to stimulation of any sort, and does not necessarily mean that it did not receive the stimulus.

Newman and Patterson found in the nine-banded armadillo, that in as many as 90 per cent. of observed cases there are four embryos contained in a single vesicle. These are always of the same sex, their germ layers are inverted, and their general relation to one another is such that the two investigators can find no other explanation than that they have arisen in all cases from a division of the four cell stage of the egg into its component cells, each of which has given rise to a distinct embryo. The fact that these are all of the same sex indicates that sex is determined at the time of fertilization, and is not due to nutritive conditions surrounding the embryo.

Mayer, as a contribution from the Department of Marine Zoölogy of the Carnegie Institution, published an elaborately illustrated account of the *Medusæ of the World*. This was begun in collaboration with Alexander Agassiz, but continued by Mayer alone. It attempts to give not only a description of all known species of medusæ, but reviews the literature dealing with all the embryological and experimental work which has been done on these animals.

Korschelt and Heider published during the year two more parts of their *Lehrbuch der vergleichenden Entwicklungsgeschichte der wirbellosen Thiere*, the first dealing with germ layer formation, and the second with non-sexual reproduction.

One of the most important books of the year was that on *Ants* by Wheeler. The book is encyclopædic in its treatment, dealing with the group from anatomical, physiological, psychological and systematic standpoints.

An important deep-sea exploring expedition of the year was that of the *Michael Sars*, a vessel owned by the Norwegian government though the expedition was financed by Sir John Murray. The vessel left Plymouth in April, skirting the coasts of Europe and Africa as far as Cape Bogador, then to the Azores, and across the ocean to St. John's, Newfoundland. From here she sailed back to the coast of Ireland and Scotland. Numerous hydrographic records were taken, and much zoölogical collecting done, mainly of the plankton. A summary of the results appeared in *Nature* in November, but complete reports have not yet appeared. See BIOLOGY.

ZUEBLIN, C. See LITERATURE, ENGLISH AND AMERICAN, *Political and Social Science*.

THE END

# LIST OF TITLES

## IN THE VOLUMES OF

# The New International Year Book

## For 1907, 1908, and 1909

*[This list is intended merely to facilitate reference to preceding volumes. The separate entries in the present (1910) volume, numbering over 3000, will be found in their alphabetical order in the text.]*
